Case Mix Index Calculation (Free-standing Nursing Facilities Only):

1. In calculating the case mix for each facility, CMS-mandated RUG and MDS systems will be utilized.
2. Each nursing facility resident in a facility, with a completed and submitted MDS shall be assigned to a RUG classification group on the first day of each calendar quarter. These RUG assignments will be based upon each resident's most current MDS assessment available on the first day of each calendar quarter. Using the facility's simple average of the individual residents' case mix indexes, two case mix indexes (CMIs) will be calculated for the facility. One being a facility wide CMI, which will be based upon all of the facility's residents, and the other being the Medicaid CMI, which will be calculated using only the Medicaid residents for each facility. Both of these average case mix indexes will be rounded to four decimal places.
