METHODS AND STANDARDS FOR ESTABLISHING PAYMENT RATES-INPATIENT HOSPITAL CARE

neonatal intensive-care cases for PA MA beneficiaries using the following formula: (A) For each hospital, elemente the ratio of the hospital's neonatal intensive-care cases for PA MA beneficiaries. (B) For each hospital multiply: the ratio under clause (A) by the number of the hospital's neonatal intensive-care cases for PA MA beneficiaries. (C) Add the products under clause (B) for all hospitals. (D) Divide the amount available for distribution to rural hospitals by the sum under clause (C). (E) Multiply the quotient under clause (B) for all hospitals by the sum under clause (C). (D) For rural hospitals located in counties whose ratio of MA eligible persons to lotal countles, put less than 1.3 standard deviations above the mean for all rural counties, but its less than 1.3 standard deviations above the mean for all rural counties, but its less than 1.3 standard deviations above the mean for all rural counties, but its less than 1.3 standard deviations above the mean for all rural counties, but its less than 1.3 standard deviations above the mean for all rural counties, but its less than 1.3 standard deviations above the mean for all rural counties, but its less than 1.3 standard deviations above the mean for all rural counties, but its less than 1.3 standard deviations above the mean for all rural counties, but its so than 1.3 standard deviations above the mean for all rural counties, but its so than 1.3 standard deviations above the mean for all rural counties, but its so than 1.3 standard deviations above the mean for all rural counties, but its so than 1.3 standard deviations above the mean for all rural counties, but its so than 1.3 standard deviations above the mean for all rural counties, but its so than 1.3 standard deviations above the mean for all rural counties, but its so than 1.3 standard deviations above the mean for all rural counties, but its so than 1.3 standard deviations above the mean for all rural counties, but its so than 1.3 standard deviations and the solution in the soluties of th	(ii)	Of the	amount available for distribution for rural hospitals, 10% will be distributed to qualified rural hospitals with
to all neonatal intensive-care cases for the hospital. (B) For each hospital multiply: the ratio under clause (A) by the number of the hospital's neonatal intensive-care cases for PA MA beneficiaries. (C) Add the products under clause (B) for all hospitals by the sum under clause (C). (E) Multiply the quotient under clause (B) for all hospitals because (B). (F) For trust hospitals located in counties whose ratio of MA eligible persons to total county population exceeds the product in datuse (E) by 1.50. For trust hospitals located in counties whose ratio of MA eligible persons to total county population are requised for greater then 1.2 standard deviations above the mean for all rural counties, but it is eas then 1.3 standard deviations above the mean for all rural counties, but it is eas then 1.3 standard deviations above the mean for all rural counties, multiply the product in clause (C) by 1.75. For rural hospitals located in counties whose ratio of MA eligible persons to total county population is equal to or greater than 1.6 standard deviations above the mean for all rural counties, multiply the product in clause (C) by 1.75. For rural hospitals will be distributed equality among qualified rural hospitals will be distributed equality among qualified rural hospitals will obstitic asses for PA MA beneficiaries. (Iv) To ensure that psyments do not exceed available funds, the Department will adjust payments to each hospital using the following formula: (A) The calculated total amount of payments for each hospital under steps (I), (II), and (III) in this section is divided by the total calculated amount for all hospitals to obtain a percentage, which is a ratio of each hospital with obstetrical cases for PA MA beneficiaries. (B) The resulting percentage for each hospital in clause (A) is multiplied by the total available funds to obtain a proportional payment for each hospital. (B) Add the products under clause (B) for all hospitals as follows: (C) Add the products under clause (B) for all hospitals by	neonatai intensive-care cas		A MA beneficiaries using the following formula:
For each hospital multiply: the ratio under clause (A) by the number of the hospital's neonatal intensive-care cases for PA MA beneficiaries. (C) Divide the amount available for distribution to urural hospitals by the sum under clause (C). Multiply the quotient under clause (C) by the product under clause (B). (F) For rural hospitals located in counties whose ratio of MA eligible persons to total county population exceeds the notation of MA eligible persons to total county population is equal to or greater than 1.3 standard deviations above the mean for all rural counties, but is less than 1.3 standard deviations above the mean for all rural counties, the product in datuse (E) by 1.50. For rural hospitals blocated in counties whose ratio of MA eligible persons to total county population is equal to or greater than 1.3 standard deviations above the mean for all rural counties, multiply the product in clause (E) by 1.55. For rural hospitals tocated in counties whose ratio of MA eligible persons to total county population is equal to or greater than 1.3 standard deviations above the mean for all rural counties, multiply the product in clause (E) by 2.0. (III) 55% of the funds available for rural hospitals will be distributed equality among qualified rural hospitals will nobativise cases for PA MA beneficiaries. (IV) To ensure that payments do each hospital under steps (I), (III), and (III) in this section is the following formula: (IV) The calculated to not exceed available funds, the Department will adjust payments to each hospital under steps (I), (III), and (III) in this section is a ratio of each hospital under steps (I), (III), and (III) in this section is proportional payment for each hospitals to obtain a percentage, which is a ratio of each hospital's respective share of the calculated amount. (IV) Of the elighty-five percent, 52.5% will be distributed to qualified nonrural hospitals with obstetrical cases for PA MA beneficiaries using the following formula: (IV) Of the elighty-five percent, 52.5% w	4		
cases for PA MA beneficiaries. (C) Add the products under clause (B) for all hospitals. (D) Wilds the amount available for distribution to rural hospitals by the sum under clause (C). Multiply the quotient under clause (D) by the product under clause (B) for all hospitals becauld no comise whose ratio of MA eligible persons to lotal county population exceeds the product in clause (E) by 1.0. For rural hospitals becauld in counties whose ratio of MA eligible persons to lotal county population is equal to or greater than 1.3 standard deviations above the mean for all rural counties, but its less than 1.3 standard deviations above the mean for all rural counties, but less than 1.6 standard deviations above the mean for all rural counties, but less than 1.6 standard deviations above the mean for all rural counties, but less than 1.6 standard deviations above the mean for all rural counties, but less than 1.6 standard deviations above the mean for all rural counties, multiply product in clause (E) by 2.0. (III) 15% of the funds available for rural hospitals will be distributed equally among quelified rural hospitals with obstetrical cases for PA MA beneficiaries. (IV) To ensure that payments do not exceed available funds, the Department will adjust payments to each hospital using the foliowing formular: (A) The calculated total amount of payments for each hospital under steps (I), (II), and (III) in this section is divided by the total calculated amount for all hospitals to obtain a percentage, which is a ratio of each hospital's respective share of the calculated amount. (B) The resulting percentage for each hospital in clause (A) is multiplied by the total available funds to obtain a percentage, which is a ratio of each hospital's expective share of the calculated amount available will be paid to qualified nonrural hospitals as follows: (B) Of the eighty-five percent, 52.5% will be distributed to qualified nonrural hospitals obstetrical cases for PA MA beneficiaries. (C) Add the products under cla	to all neonatal intensive-car		
(C) Add the products under clause (B) for all hospitals. (D) Divide the amount available for distribution to rural hospitals by the sum under clause (C). (E) Multiply the quotient under clause (D) by the product under clause (B). For rural hospitals located in counties whose ratio of MA eligible persons to total county population exceeds the counties whose ratio of MA eligible persons to total county population exceeds the rural clause (E) by 1.50. For rural hospitals located in counties whose ratio of MA eligible persons to total county population above the mean for all rural counties, multiply the product in clause (E) by 1.75. For rural hospitals located in counties whose ratio of MA eligible persons to total county population is equal to or greater than 1.5 standard deviations above the mean for all rural counties, multiply the product in clause (E) by 1.75. For rural hospitals will be distributed equally among qualified rural counties, multiply the product in clause (E) by 1.75. For rural hospitals will be distributed equally among qualified rural hospitals will be distributed equally among qualified rural population is equal to or greater than 1.5 standard deviations above the mean for all rural counties, multiply the product in clause (E) by 2.0. (iii) 15% of the funds available for rural hospitals will be distributed equally among qualified rural hospitals using the following formula: (A) To ensure that payments do not exceed available funds, the Department will adjust payments to each hospital using the following formula: (B) The calculated total amount of payments for each hospital under steps (I), (II), and (III) in this section is distributed to a section of each hospital funds to obtain a percentage, which is a ratio of each hospital with obstetrical cases for PA MA beneficiaries using the following formula: (b) 85% of the total amount available will be paid to qualified nonrural hospitals with obstetrical cases for PA MA beneficiaries using the following formula: (C) Add the products under			For each hospital multiply: the ratio under clause (A) by the number of the hospital's neonatal intensive-care
(D) Divide the amount available for distribution to rural hospitals by the sum under clause (C). (E) Multiply the quotient under clause (D) by the product under clause (B). (F) For rural hospitals located in counties whose ratio of MA eligible persons to total county population exceeds one standard deviation above the mean for all rural counties, but is less than 1.3 standard deviations above the mean for all rural counties, multiply the product in clause (E) by 1.75. For rural hospitals located in counties whose ratio of MA eligible persons to total county population is equal to or greater than 1.8 standard deviations above the mean for all rural counties, multiply the product in clause (E) by 1.75. For rural hospitals located in counties whose ratio of MA eligible persons to total county population is equal to or greater than 1.8 standard deviations above the mean for all rural counties, multiply the product in clause (E) by 2.0. (ii) 15% of the funds available for rural hospitals will be distributed equally among qualified rural hospitals with obstetrical cases for PA MA beneficiaries. (Iv) To ensure that payments do not exceed available funds, the Department will adjust payments to each hospital using the following formula: (A) The calculated total amount of payments for each hospital under steps (I), (II), and (III) in this section is amount. (B) The resulting percentage for each hospital in clause (A) is multiplied by the total available funds to obtain a percentage, which is a ratio of each hospital with obstetrical cases for PA MA beneficiaries. (b) 85% of the total amount available will be paid to qualified nonrural hospitals as follows: (i) Of the eighty-five percent, 52.5% will be distributed to qualified nonrural hospitals with obstetrical cases for PA MA beneficiaries. (b) Add the products under clause (B) for all hospitals. (c) Add the products under clause (B) for all hospitals. (d) For each hospital, multiply the ratio under clause (A) by the number of the hospital's neonatal intensiv	cases for PA MA beneficiar		
(E) Multiply the quotient under clause (D) by the product under clause (B). (F) For rural hospitals located in counties whose ratio of MA eligible persons to total county population exceeds one standard deviation above the mean for all rural counties, but is less than 1.3 standard deviations above the mean for all rural counties, the product in clause (E) by 1.50. For rural hospitals located in counties whose ratio of MA eligible persons to total county population is equal to or greater than 1.3 standard deviations above the mean for all rural counties, multiply the product in clause (E) by 1.75. For rural hospitals located in counties whose ratio of MA eligible persons to total county population is equal to or greater than 1.6 standard deviations above the mean for all rural counties, and the population is equal to or greater than 1.6 standard deviations above the mean for all rural counties, and the product in clause (E) by 2.0. (III) 15% of the funds available for rural hospitals located in counties whose ratio of MA eligible persons to total county population is equal to or greater than 1.6 standard deviations above the mean for all rural counties, and the population is equal to or greater than 1.6 standard deviations above the mean for all rural counties. (IV) 15% of the funds available for rural hospitals located in counties whose ratio of MA eligible persons to total county population is equal to or greater than 1.6 standard deviations. (A) To ensure that payments do not exceed available funds, the Department will adjust payments to each hospital using formulat. (A) To esculated total amount of payments for each hospital under staps (I), (II), and (III) in this section is a divided by the total calculated amount for all hospitals to obtain a personating, which is a ratio of sech hospital with obstetrical cases for PA MA beneficiaries using the following formula: (B) The resulting personal ger each hospital hospitals in clause (A) by the number of the hospital's obstetrical cases for PA MA beneficia			
(F) For rural hospitats located in counties whose ratio of MA eligible persons to total county population exceeds one standard deviation above the mean for all rural counties, but is less than 1.3 standard deviations above the mean for all rural counties, multiply the product in clause (E) by 1.50. For rural hospitate located in counties whose ratio of MA eligible persons to total county population is equal to or greater than 1.3 standard deviations above the mean for all rural counties, but less than 1.5 standard deviations above the mean for all rural counties, multiply the product in clause (E) by 1.75. For rural hospitate located in counties whose ratio of MA eligible persons to total county population is equal to or greater than 1.5 standard deviations above the mean for all rural counties, multiply the product in clause (E) by 2.0. (II) 15% of the funds available for rural hospitate with be distributed equally among qualified rural hospitals with obstetrical cases for PA MA beneficiaries. (IV) To ensure that payments do not exceed available funds, the Department will adjust payments to each hospital using the following formular: (A) The calculated total amount of payments for each hospital under steps (I), (II), and (III) in this section is divided by the total calculated amount for all hospitals to obtain a percentage, which is a ratio of each hospital's respective share of the calculated amount. (B) The resulting percentage for each hospital in clause (A) is multiplied by the total available funds to obtain a proportional payment for each hospital. (B) Afformation available will be paid to qualified nonrural hospitals as follows: (I) Of the eligiby-five percent, 52.5% will be distributed to qualified nonrural hospitals with obstetrical cases for PA MA beneficiaries to all obstetrical cases for the hospital. (B) For each hospital, multiply the ratio under clause (A) by the number of the hospital's obstetrical cases for PA MA beneficiaries. (C) Add the products under clause (B) for all hospitals.		(D)	
one standard deviation above the mean for all rural counties, but is less than 1.3 standard deviations above the mean for all rural counties, multiply the product in clause (E) by 1.50. For rural hospitals located in counties whose ratio of MA eligible persons to lotal county population is equal to or greater than 1.8 standard deviations above the mean for all rural counties, multiply the product in clause (E) by 1.75. For rural hospitals located in counties whose ratio of MA eligible persons to total county population is equal to or greater than 1.8 standard deviations above the mean for all rural counties, multiply the product in clause (E) by 2.0. (iii) 15% of the funds available for rural hospitals with a distributed equally among qualified rural hospitals with obstatrical cases for PA MA beneficiaries. (iv) To ensure that payments do not exceed available funds, the Department will adjust payments to each hospital using the following formula: (A) The calculated total amount of payments for each hospital under steps (I), (II), and (III) in this section is divided by the total calculated amount for all hospitals to obtain a percentage, which is a ratio of each hospital's respective share of the calculated amount. (B) The resulting percentage for each hospital in clause (A) is multiplied by the total available funds to obtain a proportional payment for each hospital. (b) 85% of the total amount available will be paid to qualified nonrural hospitals as follows: (c) Of the elighty-five percent, 52.5% will be distributed to qualified nonrural hospitals with obstatrical cases for PA MA beneficiaries. (d) Of the elighty-five percent, 52.5% will be distributed to qualified nonrural hospitals with obstatrical cases for PA MA beneficiaries. (d) Of the amount available for distribution to nonrural hospitals by the sum under clause (C). (e) Divide the amount available for distribution to nonrural hospitals by the sum under clause (C). (d) Of the amount available for distribution to nonrural hospitals. (e) Div		(E)	
the product in clause (E) by 1.50. For rural hospitals located in counties whose ratio of MA eligible persons to lotal county population is equal to or greater than 1.3 standard deviations above the mean for all rural counties, multiply the product in clause (E) by 1.75. For rural hospitals located in counties whose ratio of MA eligible persons to total county population is equal to or greater than 1.6 standard deviations above the mean for all rural counties, multiply the product in clause (E) by 2.0. (III) 15% of the funds available for rural hospitals will be distributed equally among qualified rural hospitals with obstetrical cases for PA MA beneficiaries. (IV) To ensure that payments do not exceed available funds, the Department will adjust payments to each hospital using the following formuts: (A) The calculated total amount of payments for each hospital under steps (I), (II), and (III) in this section is a ratio of each hospital's respective share of the calculated amount. (B) The resulting percentage for each hospital in clause (A) is muttiplied by the total available funds to obtain a percentage, which is a ratio of each hospital's respective share of the calculated amount. (b) 35% of the total amount available will be paid to qualified nonrural hospitals as follows: (I) Of the eighty-five percent, 52.5% will be distributed to qualified nonrural hospitals with obstetrical cases for PA MA beneficiaries to all obstetrical cases for the hospital. (B) For each hospital, multiply the ratio under clause (A) by the number of the hospital's obstetrical cases for PA MA beneficiaries. (C) Add the products under clause (B) for all hospitals. (D) Unified the amount available for distribution to nonrural hospitals by the sum under clause (C). (B) For each hospital, multiply the ratio of the hospitals. (B) For each hospital, multiply the ratio of the hospitals. (B) For each hospital, multiply the ratio of the hospitals. (C) Hothighy the quotient under clause (D) by the product under clause (B). (B) Of			For rural hospitats located in counties whose ratio of MA eligible persons to total county population exceeds
greater than 1.3 standard deviations above the mean for all rural counties, but less than 1.6 standard deviations above the mean for all rural counties, multiply the product in clause (E) by 1.75. For rural hospitats located in counties whose ratio of MA eligible persons to total country population is equal to or greater than 1.5 standard deviations above the mean for all rural counties, multiply the product in clause (E) by 2.0. 15% of the funds available for rural hospitats will be distributed equally among qualified rural hospitats with obstetrical cases for PA MA beneficiaries. (IV) To ensure that payments do not exceed available funds, the Department will adjust payments to each hospital using the following formuts: (A) The calculated total amount of payments for each hospital under steps (I), (II), and (III) in this section is divided by the total calculated amount for all hospitals to obtain a percentage, which is a ratio of each hospital's respective share of the calculated amount. (B) The resulting percentage for each hospital in clause (A) is multiplied by the total available funds to obtain a proportional payment for each hospital. (D) 85% of the total amount available will be paid to qualified nonrural hospitals as follows: (I) Of the eighty-five percent, 52.5% will be distributed to qualified nonrural hospitals with obstetrical cases for PA MA beneficiaries using the following formuts: (A) For each hospital, determine the ratio of the hospital's obstetrical cases for PA MA beneficiaries to all hospitals. (B) For each hospital, multiply the ratio under clause (A) by the number of the hospital's obstetrical cases for PA MA beneficiaries using the flowing formuts. (C) Add the products under clause (B) for all hospitals. (D) Divide the amount available for distribution to nonrural hospitals by the sum under clause (C). Multiply the quotient under clause (B) for all hospitals. (B) For each hospital, determine the ratio of the hospitals. (B) For each hospital, determine the ratio	one standard deviation abo	ve the m	ean for all rural counties, but is less than 1.3 standard deviations above the mean for all rural counties, multiply
counties, multiply the product in clause (E) by 1.75. For niral hospitals located in counties whose ratio of MA eligible persons to total country population is equal to or greater than 1.6 standard deviations above the mean for all rural counties, multiply the product in clause (E) by 2.0. (III) 15% of the funds available for rural hospitals will be distributed equality among qualified rural hospitals with obstetrical cases for PA MA beneficiaries. (IV) To ensure that payments do not exceed available funds, the Department will adjust payments to each hospital using the following formuts: (A) The calculated total amount of payments for each hospital under steps (I), (II), and (III) in this section is divided by the total calculated amount for all hospitals to obtain a percentage, which is a ratio of each hospital's respective share of the calculated amount. (B) The resulting percentage for each hospital in clause (A) is multiplied by the total available funds to obtain a proportional payment for each hospital. (b) 85% of the total amount available will be paid to qualified nonrural hospitals as follows: (I) Of the eighty-five percent, 52.5% will be distributed to qualified nonrural hospitals with obstetrical cases for PA MA beneficiaries using the following formute: (A) For each hospital, determine the ratio of the hospital's obstetrical cases for PA MA beneficiaries to all hospitals. (B) For each hospital, multiply the ratio under clause (A) by the number of the hospital's obstetrical cases for PA MA beneficiaries using the following formute: (A) Of the amount available for distribution to nonrural hospitals by the sum under clause (C). Multiply the quotient under clause (B) for all hospitals. (B) Cases for PA MA beneficiaries. (C) Add the products under clause (B) for all hospitals. (B) Cases for PA MA beneficiaries using the following formute: For each hospital, multiply the ratio under clause (A) by the number of the hospital's neonatal intensive-care cases for PA MA beneficiaries u	greater than 1.3 standard of	ieviations	shove the mean for all rural counties, but less than 1.6 standard deviations above the mean for all rural
population is equal to or greater than 1.6 standard deviations above the mean for all rural counties, multiply the product in clause (E) by 2.0. cases for PA MA beneficiaries. (iv) To ensure that payments do not exceed available funds, the Department will adjust payments to each hospital using the following formuta: (A) The calculated total amount of payments for each hospital under steps (I), (II), and (III) in this section is divided by the total calculated amount for all hospitals to obtain a percentage, which is a ratio of each hospital's respective share of the calculated amount. (B) The resulting percentage for each hospital in clause (A) is multiplied by the total available funds to obtain a percentage, which is a ratio of each hospital's respective share of the calculated amount. (b) 85% of the total amount available will be paid to qualified nonrural hospitals as follows: (I) Of the eighty-five percent, 52.5% will be distributed to qualified nonrural hospitals with obstetrical cases for PA MA beneficiaries. (C) Add the products under clause (B) for all hospitals. (C) Add the products under clause (B) for all hospitals. (D) Divide the amount available for distribution to nonrural hospitals by the sum under clause (C). With neonatal intensive-care cases for PA MA beneficiaries using the following formuta: (A) For each hospital, determine the ratio of the hospitals. (A) For each hospital, determine the ratio of the hospitals by the sum under clause (C). Multiply the quotient under clause (B) for all hospitals by the sum under clause (C). (B) Multiply the quotient under clause (D) by the product under clause (B). (C) Add the products under clause (B) for all hospitals in nonatal intensive-care cases for PA MA beneficiaries using the following formuta: (A) For each hospital, determine the ratio of the hospitals. (D) Divide the 32.5% by the sum under clause (B) by the number of the hospital's neonatal intensive-care cases for PA MA beneficiaries using the following formuta: (C) Add the produ			
cases for PA MA beneficiaries. (iv) To ensure that payments do not exceed available funds, the Department will adjust payments to each hospital using the following formula: (A) The calculated total amount of payments for each hospital under steps (i), (ii), and (iii) in this section is divided by the total calculated amount for all hospitals to obtain a percentage, which is a ratio of each hospital's respective share of the calculated amount. (B) The resulting percentage for each hospital in clause (A) is muttiplied by the total available funds to obtain a proportional payment for each hospital. (b) 85% of the total amount available will be paid to qualified nonrural hospitals as follows: (i) Of the eighty-five percent, 52.5% will be distributed to qualified nonrural hospitals with obstetrical cases for PA MA beneficiaries using the following formula: (A) For each hospital, determine the ratio of the hospital's obstetrical cases for PA MA beneficiaries to all (B) For each hospital, multiply the ratio under clause (A) by the number of the hospital's obstetrical cases for PA MA beneficiaries to all ply the quotient under clause (B) for all hospitals by the sum under clause (C). (d) Of the amount available for distribution to nonrural hospitals by the sum under clause (C). (d) Of the amount available for distribution to nonrural hospitals by the distributed to qualified nonrural hospitals with neonatal intensive-care cases for PA MA beneficiaries using the following formula: (A) For each hospital, determine the ratio of the hospital's neonatal intensive-care cases for PA MA beneficiaries using the following formula: (A) For each hospital, determine the ratio of the hospital's neonatal intensive-care cases for PA MA beneficiaries using the following formula: (A) For each hospital, determine the ratio of the hospital's neonatal intensive-care cases for PA MA beneficiaries. (C) Multiply the quotient under clause (B) for all hospitals. For each hospital, determine the ratio of the hospitals. For each hospit			
cases for PA MA beneficiaries. (iv) To ensure that payments do not exceed available funds, the Department will adjust payments to each hospital using the following formula: (A) The calculated total amount of payments for each hospital under steps (I), (II), and (III) in this section is divided by the total calculated amount for all hospitals to obtain a percentage, which is a ratio of each hospital's respective share of the calculated amount. (B) The resulting percentage for each hospital in clause (A) is multiplied by the total available funds to obtain a proportional payment for each hospital. (b) 85% of the total amount available will be paid to qualified nonrural hospitals as follows: (I) Of the eighty-five percent, 52.5% will be distributed to qualified nonrural hospitals with obstetrical cases for PA MA beneficiaries using the following formula: (B) For each hospital, determine the ratio of the hospital's obstetrical cases for PA MA beneficiaries. (C) Add the products under clause (B) for all hospitals. (B) For each hospital, multiply the ratio under clause (A) by the number of the hospital's obstetrical cases for PA MA beneficiaries using the following formula: (C) Add the products under clause (B) for all hospitals, 32.6% will be distributed to qualified nonrural hospitals with neonatal intensive-care cases for PA MA beneficiaries using the following formula: (A) For each hospital, multiply the ratio under clause (A) by the number of the hospital's neonatal intensive-care cases for PA MA beneficiaries using the following formula: (A) For each hospital, multiply the ratio under clause (A) by the number of the hospital's neonatal intensive-care cases for PA MA beneficiaries. (C) Add the products under clause (B) for all hospitals. (B) For each hospital, multiply the ratio under clause (C) by the number of the hospital's neonatal intensive-care cases for PA MA beneficiaries. (C) Multiply the quotient under clause (B) for all hospitals. (E) Multiply the quotient under clause (C) by the product			
the following formula: (A) The calculated total amount of payments for each hospital under steps (i), (ii), and (iii) in this section is divided by the total calculated amount for all hospitals to obtain a percentage, which is a ratio of each hospital's respective share of the calculated amount. (B) The resulting percentage for each hospital in clause (A) is multiplied by the total available funds to obtain a proportional payment for each hospital. (b) 85% of the total amount available will be paid to qualified nonrural hospitals as follows: (i) Of the eighty-five percent, 52.5% will be distributed to qualified nonrural hospitals with obstetrical cases for PA MA beneficiaries using the following formula: (c) Add the products under clause (B) for all hospitals. (d) For each hospital, multiply the ratio under clause (A) by the number of the hospital's obstetrical cases for PA MA beneficiaries. (d) Of the amount available for distribution to nonrural hospitals by the sum under clause (C). (d) Of the amount available for distribution to nonrural hospitals by the sum under clause (C). (d) Of the amount available for distribution to nonrural hospitals, alternately accesses for PA MA beneficiaries. (e) Add the products under clause (D) by the product under clause (B). (d) Of the amount available for distribution to nonrural hospitals, 32.5% will be distributed to qualified nonrural hospitals. (A) For each hospital, determine the ratio of the hospital's neonatal intensive-care cases for PA MA beneficiaries. (b) Divide the 32.5% by the sum under clause (C) by the number of the hospital's neonatal intensive-care cases for PA MA beneficiaries. (c) Add the products under clause (B) for all hospitals. (d) Divide the 32.5% by the sum under clause (C) by the number of the hospital's neonatal intensive-care cases for PA MA beneficiaries. (e) Divide the 32.5% by the sum under clause (B) for all hospitals. (f) Of the amount available for distribution to nonrural hospitals, 15% will be distributed equally among qu			n me intres diamente los trististes ani en disminera adreira antenió directina un electros assesses
the following formula: (A) The calculated total amount of payments for each hospital under steps (I), (II), and (III) in this section is divided by the total calculated amount for all hospitals to obtain a percentage, which is a ratio of each hospital's respective share of the calculated amount. (B) The resulting percentage for each hospital in clause (A) is multiplied by the total available funds to obtain a proportional payment for each hospital. (b) 85% of the total amount available will be paid to qualified nonrural hospitals as follows: (I) Of the eighty-five percent, 52.5% will be distributed to qualified nonrural hospitals with obstetrical cases for PA MA beneficiaries using the following formula: (A) For each hospital, determine the ratio of the hospital's obstetrical cases for PA MA beneficiaries. (C) Add the products under clause (B) for all hospitals. (B) For each hospital, multiply the ratio under clause (A) by the number of the hospital's obstetrical cases for PA MA beneficiaries. (C) Add the products under clause (D) by the product under clause (B). (II) Of the amount available for distribution to nonrural hospitals, 32.5% will be distributed to qualified nonrural hospitals. (A) For each hospital, multiply the ratio under clause (B). (II) Of the amount available for distribution to nonrural hospitals, 32.5% will be distributed to qualified nonrural hospitals. (B) For each hospital, multiply the ratio under clause (A) by the number of the hospital's neonatal intensive-care cases for PA MA beneficiaries using the following formula: (C) Add the products under clause (B) for all hospitals. (C) Add the products under clause (B) for all hospitals. (C) Add the products under clause (C) by the product under clause (B). (III) Of the amount available for distribution to nonrural hospitals. (E) Add the products under clause (C) by the product under clause (B). (III) Of the amount available for distribution to nonrural hospitals, 15% will be distributed equally among qualified nonrural hospi			erice that neumants do not exceed evallable hinds, the Department will artife t neumants to each heavital isolar
(A) The calculated total amount of payments for each hospital under steps (I), (II), and (III) in this section is divided by the total calculated amount for all hospitals to obtain a percentage, which is a ratio of each hospital's respective share of the calculated amount. (B) The resulting percentage for each hospital in clause (A) is multiplied by the total available funds to obtain a proportional payment for each hospital. (b) 85% of the total amount available will be paid to qualified nonrural hospitals as follows: (I) Of the eighty-five percent, 52.5% will be distributed to qualified nonrural hospitals with obstetrical cases for PA MA beneficiaries using the following formula: (A) For each hospital, determine the ratio of the hospital's obstetrical cases for PA MA beneficiaries to all obstetrical cases for the hospital. (B) For each hospital, multiply the ratio under clause (A) by the number of the hospital's obstetrical cases for PA MA beneficiaries. (C) Add the products under clause (B) for all hospitals. (D) Divide the amount available for distribution to nonrural hospitals by the sum under clause (C). (II) Of the amount available for distribution to nonrural hospitals, 32.5% will be distributed to qualified nonrural hospitals with neonatal intensive-care cases for PA MA beneficiaries using the following formula: (A) For each hospital, determine the ratio of the hospital's neonatal intensive-care cases for the hospital. For each hospital, determine the ratio of the hospital's neonatal intensive-care cases for the hospital. (B) For each hospital, multiply the ratio under clause (A) by the number of the hospital's neonatal intensive-care cases for the hospital. For each hospital, determine the ratio of the hospitals. (C) Add the products under clause (B) for all hospitals. (D) Divide the 32.5% by the sum under clause (C). (E) Multiply the quotent under clause (C) by the product under clause (B). (E) Multiply the quotent under clause (C) by the product under clause (B). (E) Multiply the qu		10 011	and that halling no hot except attitions things, the paper that this adjust halling to each moshim would
divided by the total calculated amount for all hospitals to obtain a percentage, which is a ratio of each hospital's respective share of the calculated amount. (B) The resulting percentage for each hospital in clause (A) is multiplied by the total available funds to obtain a proportional payment for each hospital. (b) 85% of the total amount available will be paid to qualified nonrural hospitals as follows: (i) Of the eighty-five percent, 52.5% will be distributed to qualified nonrural hospitals with obstetrical cases for PA MA beneficiaries using the following formuta: (A) For each hospital, determine the ratio of the hospital's obstetrical cases for PA MA beneficiaries to all obstetrical cases for the hospital. (B) For each hospital, multiply the ratio under clause (A) by the number of the hospital's obstetrical cases for PA MA beneficiaries. (C) Add the products under clause (B) for all hospitals. (D) Divide the amount available for distribution to nonrural hospitals by the sum under clause (C). (II) Of the amount available for distribution to nonrural hospitals by the sum under clause (C). with neonatal intensive-care cases for PA MA beneficiaries using the following formuta: (A) For each hospital, determine the ratio of the hospital's neonatal intensive-care cases for PA MA beneficiaries using the following formuta: (A) For each hospital, determine the ratio of the hospital's neonatal intensive-care cases for PA MA beneficiaries. (B) C) C) Add the products under clause (B) for all hospitals. (B) For each hospital, multiply the ratio under clause (A) by the number of the hospital's neonatal intensive-care cases for PA MA beneficiaries. (C) Add the products under clause (B) for all hospitals. (B) For each hospital, multiply the ratio under clause (C) by the product under clause (B). (C) Add the products under clause (C) by the product under clause (B). (E) Multiply the quotient under clause (C) by the product under clause (B). (E) Multiply the quotient under clause (B) for all hospitals. (the toward formula.	(A)	The entertainted total amount of neumants for each beenful under stone (I) (III) and (III) in this section is
amount. (B) The resulting percentage for each hospital in clause (A) is multiplied by the total available funds to obtain a proportional payment for each hospital. (b) 85% of the total amount available will be paid to qualified nonrural hospitals as follows: (I) Of the eighty-five percent, 52.5% will be distributed to qualified nonrural hospitals with obstetrical cases for PA MA beneficiaries using the following formula: (A) For each hospital, determine the ratio of the hospital's obstetrical cases for PA MA beneficiaries to all obstetrical cases for the hospital. (B) For each hospital, multiply the ratio under clause (A) by the number of the hospital's obstetrical cases for PA MA beneficiaries. (C) Add the products under clause (B) for all hospitals. (D) Divide the amount available for distribution to nonrural hospitals by the sum under clause (C). (B) For each hospital, determine the ratio of the hospital's neonatal intensive-care cases for PA MA beneficiaries using the following formula: (A) For each hospital, determine the ratio of the hospital's neonatal intensive-care cases for the hospital. (B) For each hospital, multiply the ratio under clause (A) by the number of the hospital's neonatal intensive-care cases for PA MA beneficiaries. (C) Add the products under clause (B) for all hospitals. (B) For each hospital, multiply the ratio under clause (A) by the number of the hospital's neonatal intensive-care cases for PA MA beneficiaries. (C) Add the products under clause (B) for all hospitals. (D) Divide the 32.5% by the sum under clause (C). (E) Multiply the quotient under clause (D) by the product under clause (B). (II) Of the amount available for distribution to nonrural hospitals, 15% will be distributed equally among qualified nonrural hospitals with obstetrical cases for PA MA beneficiaries.	disided by the total coloule		
(b) 85% of the total amount available will be paid to qualified nonrural hospitals as follows: (i) Of the eighty-five percent, 52.5% will be distributed to qualified nonrural hospitals with obstetrical cases for PA MA beneficiaries using the following formuta: (A) For each hospital, determine the ratio of the hospital's obstetrical cases for PA MA beneficiaries to all obstetrical cases for the hospital. (B) For each hospital, multiply the ratio under clause (A) by the number of the hospital's obstetrical cases for PA MA beneficiaries. (C) Add the products under clause (B) for all hospitals. (D) Divide the amount available for distribution to nonrural hospitals by the sum under clause (C). (E) Multiply the quotient under clause (D) by the product under clause (B). (d) Of the amount available for distribution to nonrural hospitals, 32.5% will be distributed to qualified nonrural hospitals with neonatal intensive-care cases for PA MA beneficiaries using the following formuta: (A) For each hospital, determine the ratio of the hospital's neonatal intensive-care cases for PA MA beneficiaries to all neonatal intensive-care cases for the hospital. (B) For each hospital, multiply the ratio under clause (A) by the number of the hospital's neonatal intensive-care cases for PA MA beneficiaries. (C) Add the products under clause (B) for all hospitals. (B) For each hospital, multiply the ratio under clause (C). (E) Multiply the quotient under clause (D) by the product under clause (B). (III) Of the amount available for distribution to nonrural hospitals, 15% will be distributed equally among qualified nonrural hospitals with obstetrical cases for PA MA beneficiaries.		•	
(b) 85% of the total amount available will be paid to qualified nonrural hospitals as follows: (f) Of the eighty-five percent, 52.5% will be distributed to qualified nonrural hospitals with obstetrical cases for PA MA beneficiaries using the following formula: (A) For each hospital, determine the ratio of the hospital's obstetrical cases for PA MA beneficiaries to all obstetrical cases for the hospital. (B) For each hospital, multiply the ratio under clause (A) by the number of the hospital's obstetrical cases for PA MA beneficiaries. (C) Add the products under clause (B) for all hospitals. (D) Divide the amount available for distribution to nonrural hospitals by the sum under clause (C). (E) Multiply the quotient under clause (D) by the product under clause (B). (I) Of the amount available for distribution to nonrural hospitals, 32.5% will be distributed to qualified nonrural hospitals with neonatal intensive-care cases for PA MA beneficiaries using the following formula: (A) For each hospital, determine the ratio of the hospital's neonatal intensive-care cases for PA MA beneficiarie in the nospital. (B) For each hospital, multiply the ratio under clause (A) by the number of the hospital's neonatal intensive-care cases for PA MA beneficiaries. (C) Add the products under clause (B) for all hospitals. (D) Divide the 32.5% by the sum under clause (C). (E) Multiply the quotient under clause (D) by the product under clause (B). (III) Of the amount available for distribution to nonrural hospitals, 15% will be distributed equally among qualified nonrural hospitals with obstetrical cases for PA MA beneficiaries.			
beneficiaries using the following formula: (A) For each hospital, determine the ratio of the hospital's obstetrical cases for PA MA beneficiaries to all obstetrical cases for the hospital. (B) For each hospital, multiply the ratio under clause (A) by the number of the hospital's obstetrical cases for PA MA beneficiaries to all obstetrical cases for the hospital, multiply the ratio under clause (A) by the number of the hospital's obstetrical cases for PA MA beneficiaries.
