## Federal Fiscal Year (FFY) 2019 Statistical Enrollment Data System (SEDS) Reporting

The following table, "FFY 2019 Number of Children Ever-Enrolled in Medicaid and CHIP," contains state-reported enrollment data from the Statistical Enrollment Data System (SEDS) as of November 9, 2020. The CHIP enrollment data consists of all children funded by title XXI (children in title XXI-funded Medicaid expansion programs and separate CHIP programs). The Medicaid enrollment data consist of children in title XIX-funded Medicaid. These enrollment data are unduplicated counts of children who were enrolled in Medicaid and the Children's Health Insurance Program (CHIP) at any point during FFY 2019. A child who was enrolled in more than one program (e.g., Separate CHIP and Medicaid) at different times during the FFY is only counted in the program in which he or she was last enrolled.

Key Findings for FFY 2019 SEDS Reporting: Overall children's enrollment in Medicaid and CHIP declined by 730,097 children between FFY 2018 and FFY 2019, a decrease of 1.6 percent. In addition, 752,616 fewer children were enrolled in Medicaid in FFY 2019 compared to FFY 2018, a decrease of 2.1 percent. In contrast, children's enrollment in CHIP increased by 22,519 children between FFY 2018 and FFY 2019, an increase of 0.2 percent.

Important Considerations: The enrollment totals reported in this table represent the number of children ever enrolled in Medicaid and CHIP at any point during the fiscal year. Therefore, enrollment totals may seem higher than other sources of enrollment data that use a different methodology, such as the CMS Performance Indicator data. While the CMS Performance Indicator data represent a monthly point-in-time count, the SEDS enrollment totals are not point-in-time estimates and may not be representative of the number of children currently enrolled in a state's Medicaid or CHIP program. SEDS enrollment totals are a useful data source for illustrating how many individual children are enrolled annually in Medicaid and CHIP.

There are a number of factors that impact enrollment in Medicaid and CHIP, including: the economy, state eligibility system functionality, and state operations (e.g., ability to receive and process applications and conduct timely redeterminations annually or when there is a change in circumstance that may affect eligibility). Some of these considerations, such as a strong economy, state system functionality and operational issues, and reducing the backlog of delayed redeterminations may account for the FFY 2019 decline in Medicaid and CHIP enrollment. Each of the factors may impact states and their enrollment trends differently. For example, states that experienced losses in enrollment may also have experienced a decrease in unemployment rates, indicating that an improved economy may have accounted for the enrollment decline. While in other states, enrollment declines may have been influenced by state system and operational issues. For states that demonstrated an increase in CHIP enrollment and a decrease in Medicaid enrollment, this may be attributed to a rise in incomes during this timeframe; CHIP covers children with household incomes that are too high to be eligible for Medicaid, so as household incomes rose, some children may have shifted to the CHIP program.

State-specific notes can be found at the bottom of the table, which include important data limitations that may have impacted a state's reported increase or decrease in enrollment.

## Unduplicated Number of Children Ever Enrolled in CHIP and Medicaid

| State | $\begin{gathered} \hline \text { CHIP } \\ \text { FY } 2018 \end{gathered}$ | $\begin{gathered} \hline \text { CHIP } \\ \text { FY } 2019 \end{gathered}$ | Medicaid FY 2018 | Medicaid FY 2019 | CHIP and <br> Medicaid <br> FY 2018 | CHIP and Medicaid FY 2019 | Percent Growth over FY 2018 |
