

FFY 2016 CMS-416 Footnotes (as of 03/14/2019)

Note: States that have data limitations or that have made program changes during a reporting period that significantly impact data results, may include a note accompanying their Form CMS- 416 submissions. The state-submitted footnotes for FFY 2016 reporting are provided below, and should be reviewed in the context of data submissions.

California: The state updated the FFY 2016 Form CMS-416 data set as the original submission had incomplete data due to a delay in the state's data processing system. Additionally, the state refined its dental methodology for lines 12b-12f to more accurately include relevant dental code sets and oral health encounters from the state's Safety Net Clinics.

Minnesota: the state updated its programming logic in its data system to accurately identify eligible individuals in accordance with the Form CMS-416 instructions for Line 13: Total Eligibles Enrolled in Managed Care and Line 14: Total Number of Screening Blood Lead Tests. As a result, Minnesota submitted revisions to its FFY 2016 data where it restricted the counts for these two lines to individuals who met the 90 days continuous enrollment requirement.

North Dakota: the national and state FFY 2016 EPSDT extract now includes North Dakota. The state did not initially meet the statutory deadline during the FFY 2016 reporting period.
