

May 2021 Medicaid and CHIP Enrollment Trends Snapshot

Center for Medicaid and CHIP Services

Enrollment Snapshot

- To be responsive to questions on Medicaid and CHIP enrollment, particularly given the impact of the COVID-19 public health emergency (PHE), this Enrollment Snapshot captures high level information on the most recently submitted month of Performance Indicator Data within the context of trends since February 2020,¹ focusing on:
 - Total Medicaid and CHIP enrollment
 - Medicaid enrollment
 - CHIP enrollment
 - Adult enrollment
 - Child enrollment
- This analysis also captures high level information on the trend in the number of Medicaid and CHIP applications received by states.

¹ February 2020 serves as a baseline prior to the impacts of the COVID-19 pandemic and the enactment of the Families First Coronavirus Response Act (FFCRA) in March 2020. Section 6008 of FFCRA includes a continuous enrollment requirement, which makes available a temporary 6.2 percentage point increase to each state or territory's federal medical assistance percentage (FMAP) during the national PHE. As a condition of receiving the FMAP increase, states must meet several requirements pertaining to eligibility and maintenance of enrollment.

Key Findings

- In May 2021, 82,761,078 individuals were enrolled in Medicaid and CHIP, an increase of 459,367 compared to April 2021.
 - 75,888,651 individuals were enrolled in Medicaid, an increase of 441,109 compared to April 2021.
 - 6,872,427 individuals were enrolled in CHIP, an increase of 18,258 compared to April 2021.
- Since February 2020, enrollment in Medicaid and CHIP has increased by 12,073,218 individuals (17.1%).
 - Medicaid enrollment increased by 11,860,914 individuals (18.5%).
 - CHIP enrollment increased by 212,304 individuals (3.2%).
- The Medicaid enrollment increases are likely driven by COVID and the continuous enrollment requirement in the Families First Coronavirus Response Act (FFCRA).¹

¹ Families First Coronavirus Response Act, Pub. L. No. 116-127, Sec 6008, Temporary Increase of Medicaid FMAP. https://www.congress.gov/116/plaws/publ127/PLAW-116publ127.pdf

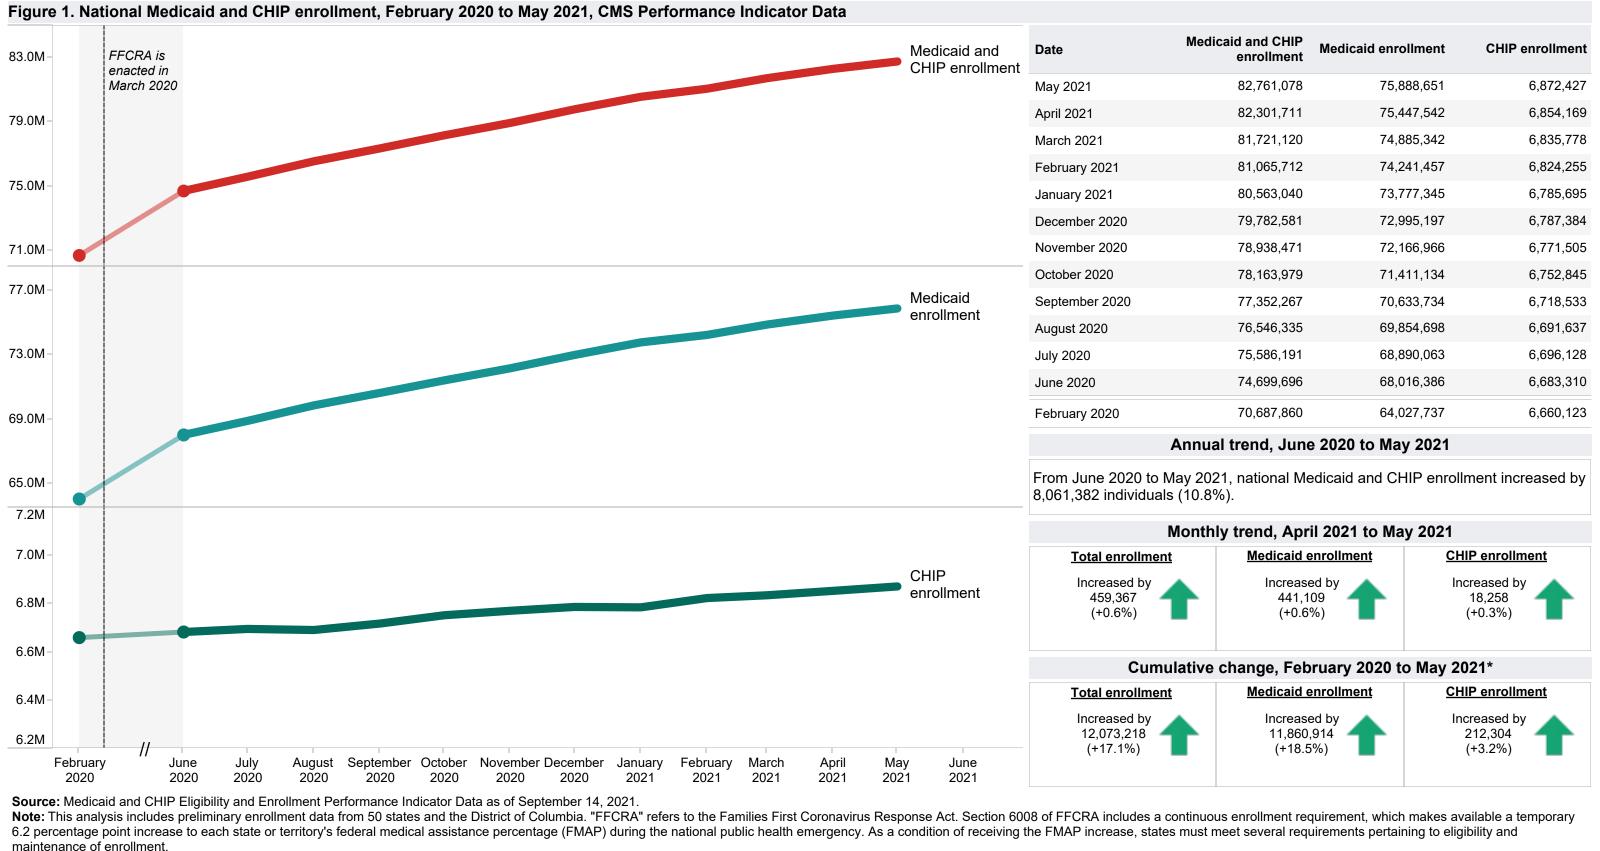

Key Findings (continued)

- In May 2021, about 2.1 million applications for Medicaid and CHIP were submitted directly to states.¹
 - The number of applications submitted directly to states was about 1 percent lower in May 2021 compared to April 2021.
- In May 2021, about 168,000 applications for Medicaid and CHIP were transferred from the Federally Facilitated Marketplace (FFM) to states.¹
 - The number of transferred applications declined by about 42 percent from April 2021 to May 2021.² Prior to this decline in May 2021, the number of transferred applications increased by 25 percent from February 2021 to March 2021 and increased again by 69 percent from March 2021 to April 2021. The number of transferred applications in May 2021 was about 23 percent higher than in February 2021, the month that the 2021 Special Enrollment Period began.³

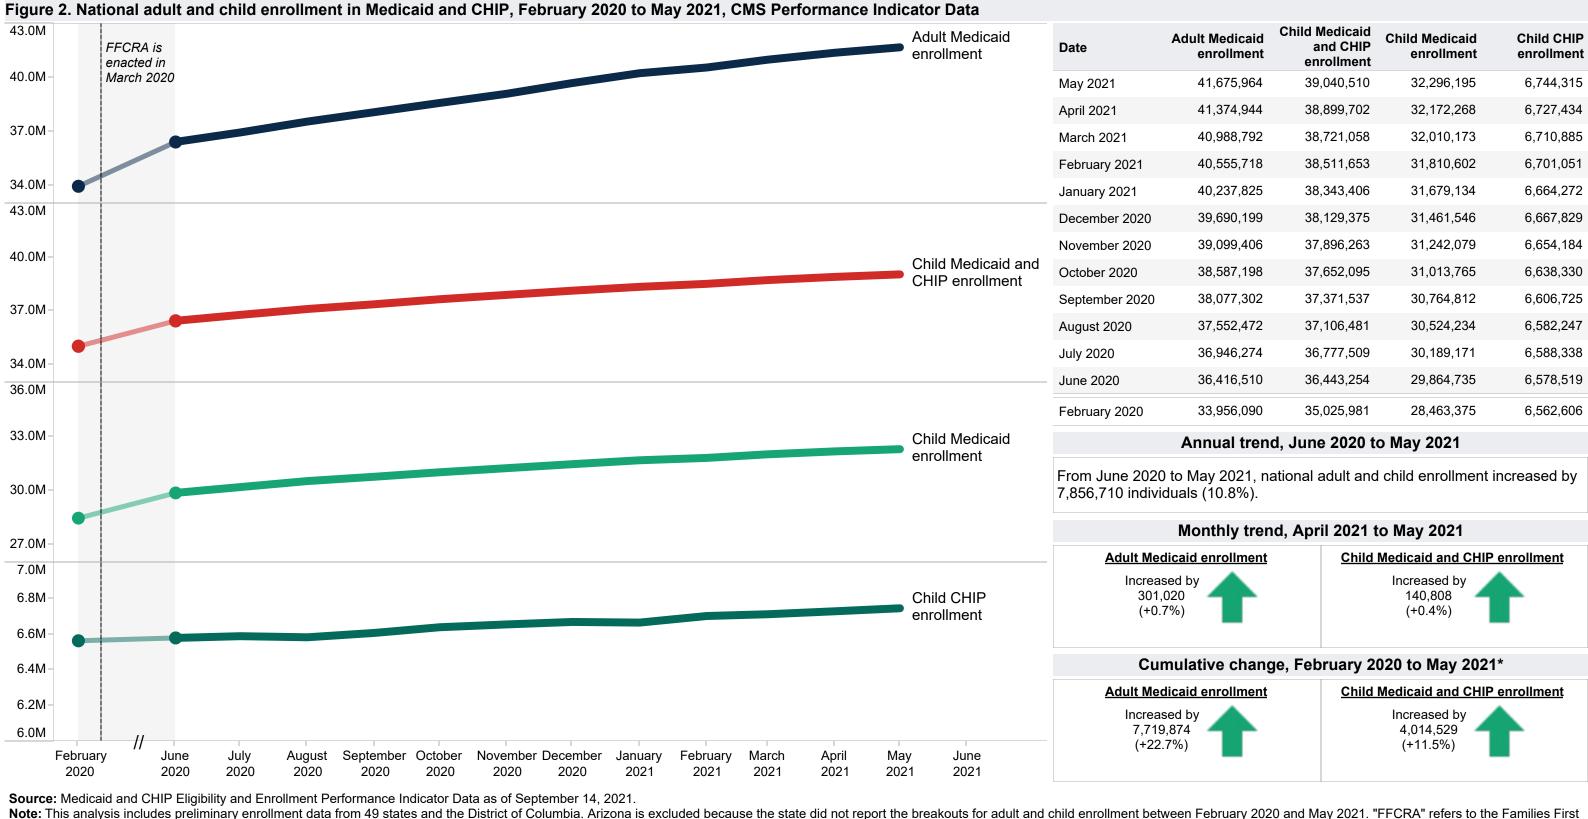

¹ These counts include applications received by the 48 states and the District of Columbia with complete data on applications submitted directly to the state from February 2020 to May 2021. Kansas and Maine are excluded due to missing applications data during this time period.

² Oklahoma did not report applications transferred from the FFM to the state in May 2021. This lack of data may account for a small proportion of the observed national decline in transferred applications from April 2021 to May 2021.

³ On January 28, 2021, <u>CMS announced</u> that it would provide a Special Enrollment Period for individuals to apply for and enroll in coverage via the HealthCare.gov Marketplace platform from February 15, 2021 through May 15, 2021. On March 23, 2021, President Biden announced that CMS would extend access to the Special Enrollment Period through August 15, 2021.

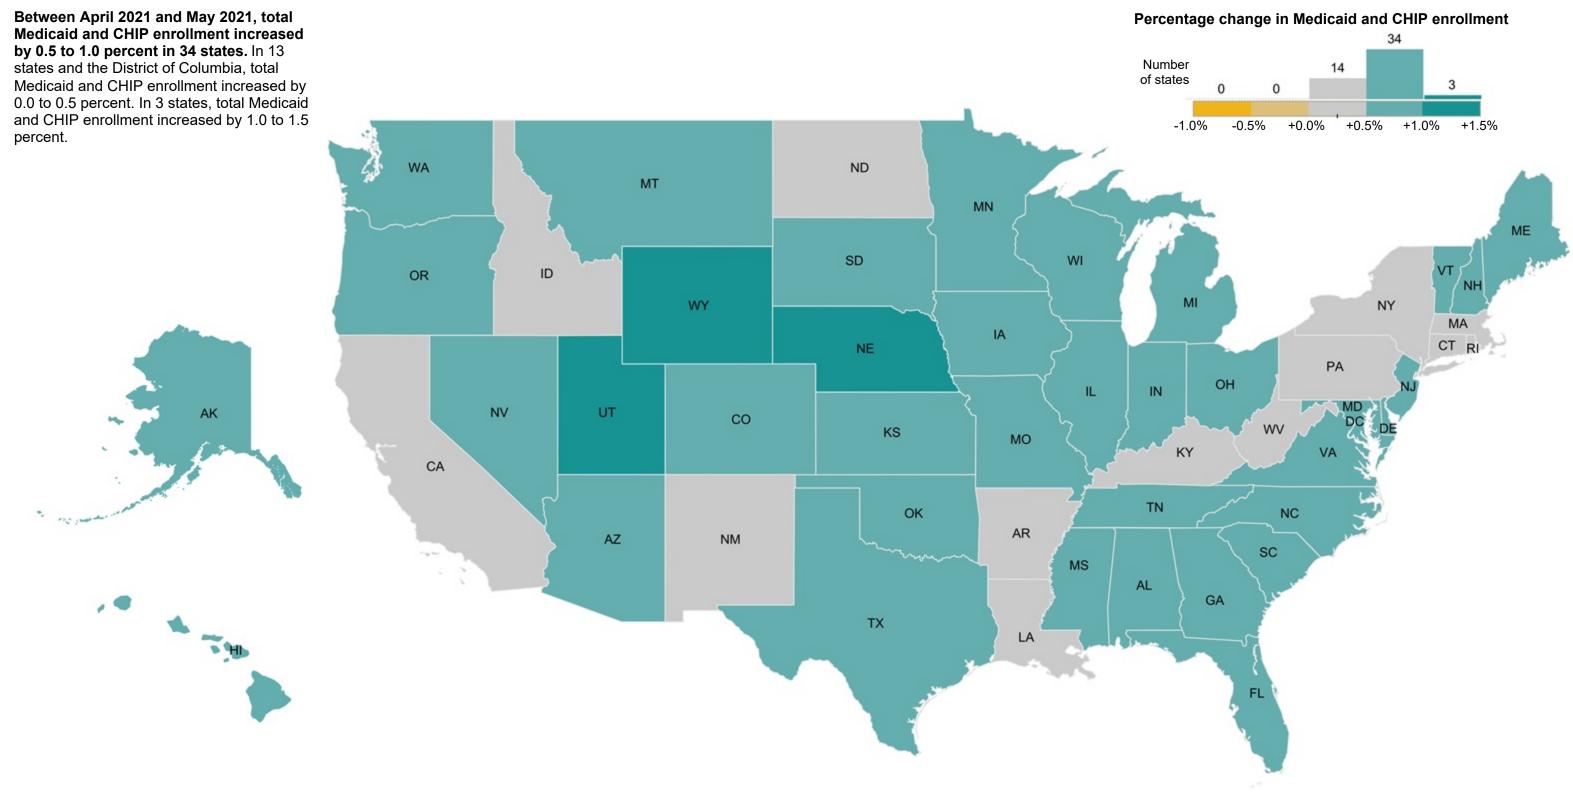

*The cumulative change compares the most recent enrollment data to February 2020, which serves as a baseline of enrollment prior to the impacts of the COVID-19 pandemic and FFCRA's continuous enrollment requirement. For additional information on Medicaid and CHIP enrollment from December 2019 to May 2021, please see Appendix A.

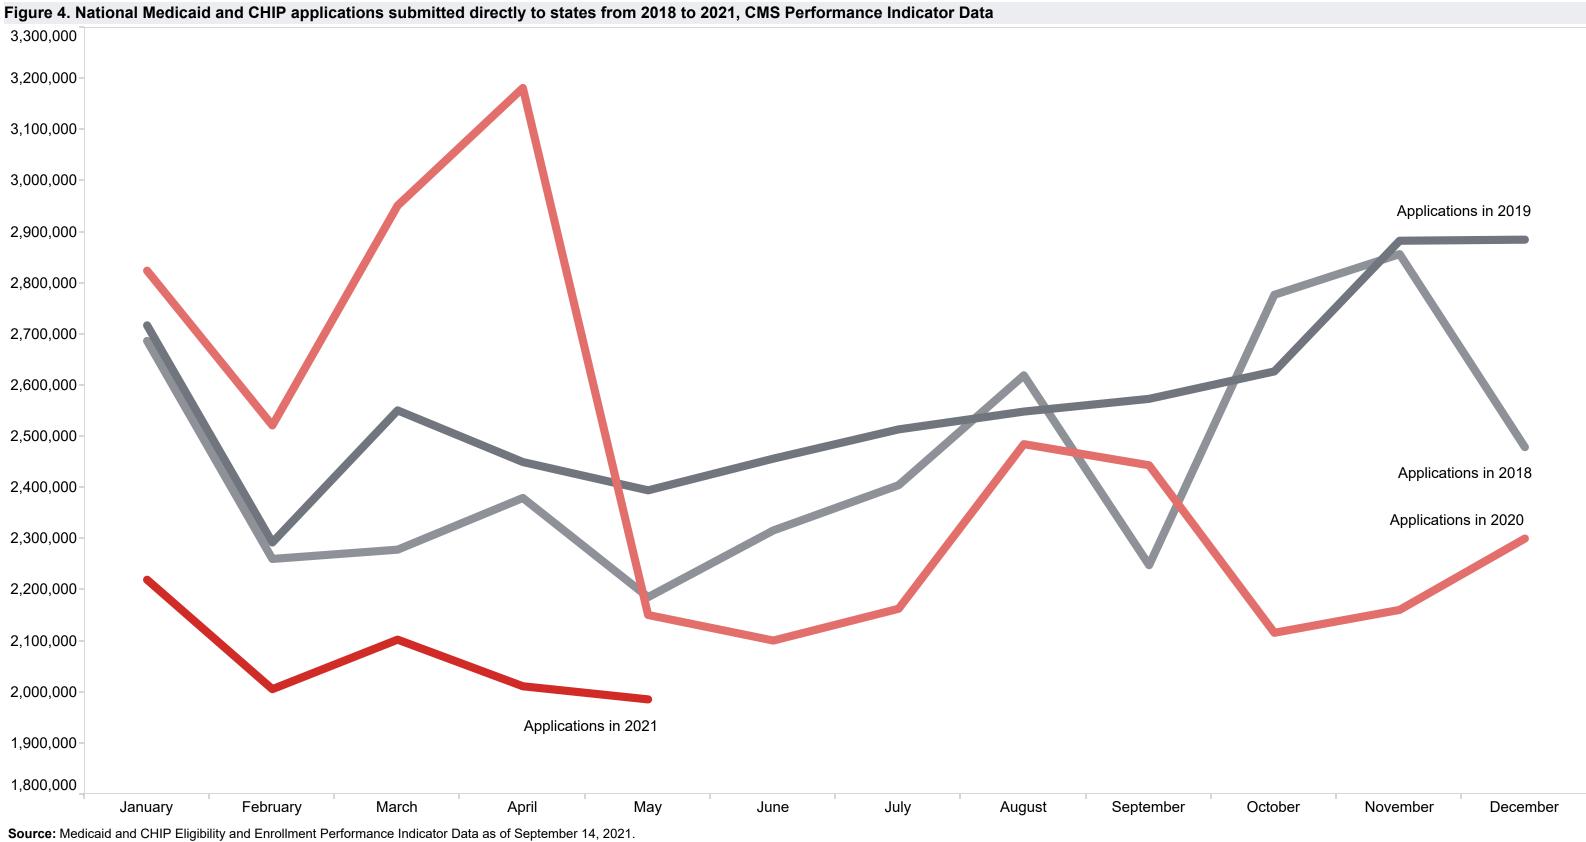

Note: This analysis includes preliminary enrollment data from 49 states and the District of Columbia. Arizona is excluded because the state did not report the breakouts for adult and child enrollment between February 2020 and May 2021. "FFCRA" refers to the Families First Coronavirus Response Act. Section 6008 of FFCRA includes a continuous enrollment requirement, which makes available a temporary 6.2 percentage point increase to each state or territory's federal medical assistance percentage (FMAP) during the national public health emergency. As a condition of receiving the FMAP increase, states must meet several requirements pertaining to eligibility and maintenance of enrollment.

^{*}The cumulative change compares the most recent enrollment data to February 2020, which serves as a baseline of enrollment prior to the impacts of the COVID-19 pandemic and FFCRA's continuous enrollment requirement. For additional information on adult and child enrollment in Medicaid and CHIP from December 2019 to May 2021, please see Appendix B.

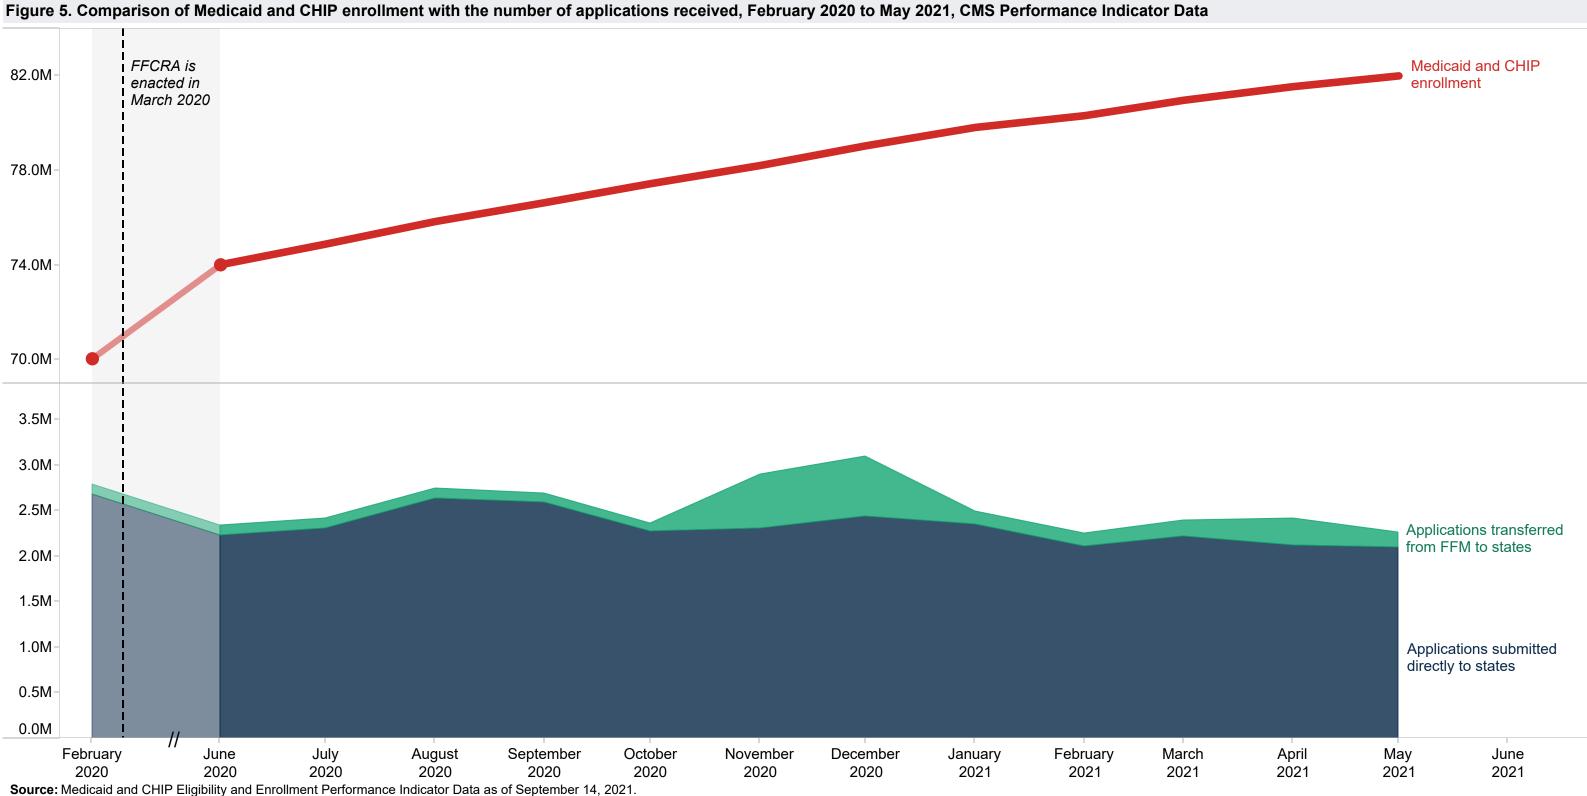

Figure 3. Change in total Medicaid and CHIP enrollment, April 2021 to May 2021, CMS Performance Indicator Data

Source: Medicaid and CHIP Eligibility and Enrollment Performance Indicator Data as of September 14, 2021. **Note:** This analysis includes preliminary enrollment data from 50 states and the District of Columbia.

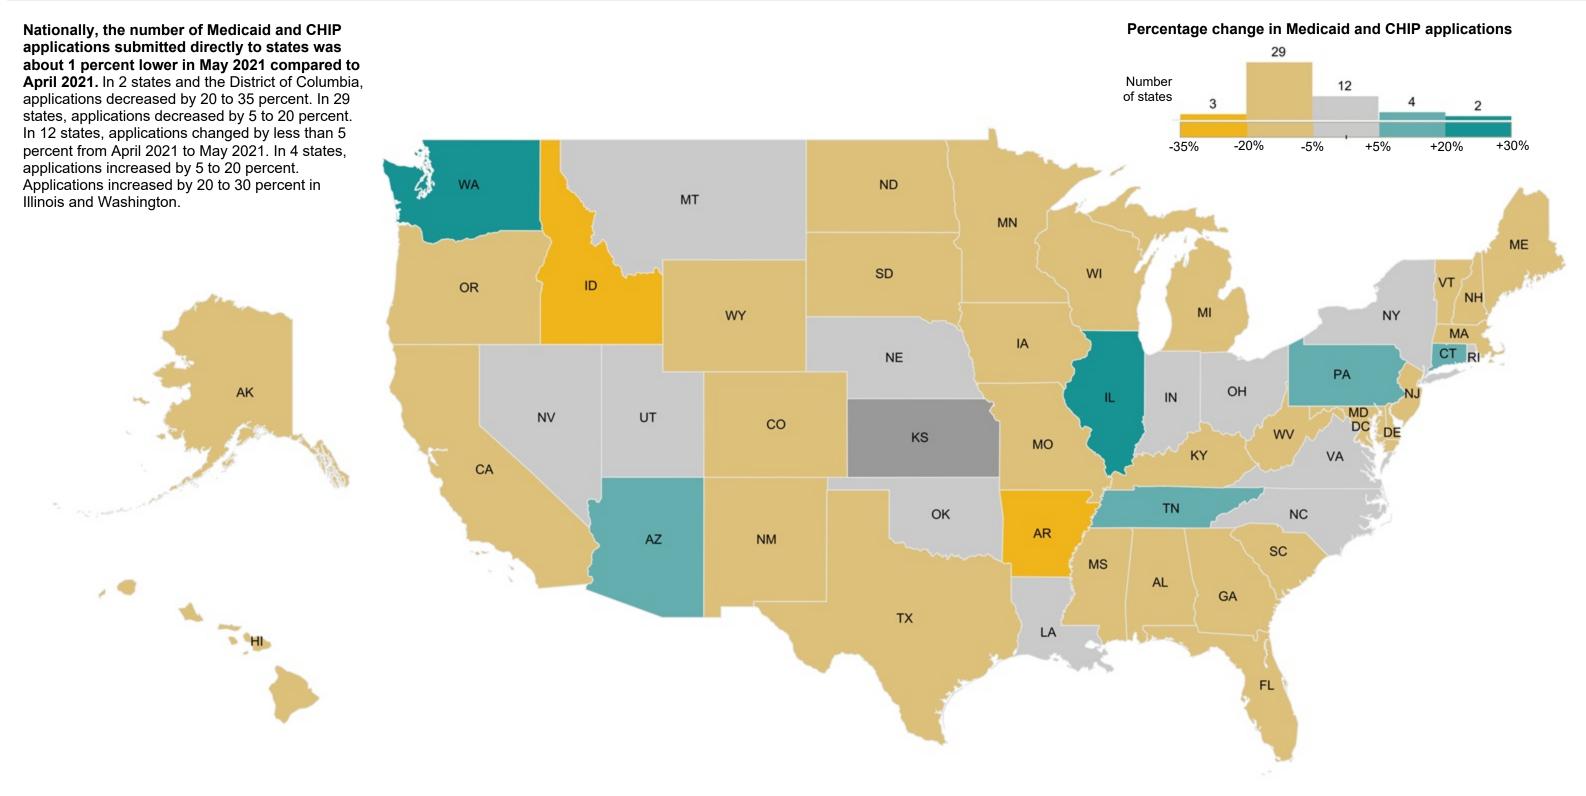

Note: Applications submitted directly to states include applications received by any state agency with the authority to make Medicaid or CHIP eligibility determinations, including the Medicaid agency, a separate CHIP agency, or a state-based marketplace. Applications transferred from the FFM are not included. This analysis includes preliminary applications data from 44 states and the District of Columbia. Arizona, Arkansas, Colorado, Kansas, Maine, and Tennessee are excluded because these states did not report applications data for one or more months between January 2018 and May 2021.

Note: Applications submitted directly to states include applications received by any state agency with the authority to make Medicaid or CHIP eligibility determinations, including the Medicaid agency, a separate CHIP agency, or a state-based marketplace. Applications transferred from the FFM to states include the total number of accounts electronically transferred from the FFM to states for Medicaid or CHIP. This analysis includes preliminary enrollment, applications, and account transfer data from 48 states and the District of Columbia. Kansas and Maine did not report data on applications submitted directly to the state for one or more months between February 2020 and May 2021, and so are excluded from this analysis.

Data quality: Nevada transitioned to a state-based marketplace for plan year 2020, but unexpectedly reported 2,245 applications transferred from the FFM to the state in January 2021. New Jersey and Pennsylvania transitioned to state-based marketplaces for plan year 2021; as of August 31, 2021, both states are working with CMS to report their data correctly before and after the transition. Oklahoma is using the FFM for plan year 2021 but unexpectedly did not report applications transferred from the FFM to the state in May 2021. These four states are retained in the analysis despite these concerns about data quality.

Figure 6. Change in Medicaid and CHIP applications submitted directly to states, April 2021 to May 2021, CMS Performance Indicator Data

Source: Medicaid and CHIP Eligibility and Enrollment Performance Indicator Data as of September 14, 2021.

Note: Applications submitted directly to states include applications received by any state agency with the authority to make Medicaid or CHIP eligibility determinations, including the Medicaid agency, a separate CHIP agency, or a state-based marketplace. Applications transferred from the FFM are not included. This analysis includes preliminary applications data from 49 states and the District of Columbia. Kansas is excluded because the state did not report applications data for April 2021 and May 2021.

Source: Medicaid and CHIP Eligibility and Enrollment Performance Indicator Data as of September 14, 2021.

Note: This table summarizes adult and child enrollment in Medicaid and CHIP since December 2019. This table is provided as a supplement to Figure 2, and includes preliminary enrollment data from 49 states and the District of Columbia. Arizona is excluded from both Figure 2 and Appendix B because the state did not report the breakouts for adult and child enrollment between February 2020 and May 2021.

Background

- This is a Center for Medicaid & CHIP Services (CMCS) Medicaid and CHIP Coverage Learning
 Collaborative (MAC LC) project that monitors Medicaid and Children's Health Insurance Program (CHIP)
 enrollment trends, primarily using the Centers for Medicare and Medicaid Services (CMS) Performance
 Indicator Data.
- The MAC LC is a CMCS project that provides a forum for facilitated discussion and learning across CMS and states, with the goal of implementing and improving the programs, tools, and systems needed to ensure high-performing state health insurance programs. The MAC LC has enabled CMS to more effectively identify issues and also monitor and improve program performance.
- This snapshot is a companion to the May 2021 Medicaid & CHIP Application, Eligibility, and Enrollment Data posted on Medicaid.gov.
- The Enrollment Trends project primarily relies on Performance Indicator Data. All states—including the District of Columbia—provide data each month about their Medicaid and CHIP eligibility and enrollment activity. These data reflect a range of indicators related to key application, eligibility, and enrollment processes within the state Medicaid and CHIP agency. The complete data set is available on Data.Medicaid.gov.
