Medicaid and CHIP Maternal Health Webinar Series: Promoting Maternal Health Improvement and Equity Through Collaboration

May 14, 2024

Kristen Zycherman, Center for Medicaid and CHIP Services
Lekisha Daniel-Robinson, Mathematica
Rishi Manchanda, HealthBegins
Sarah Krinsky, MassHealth
How to Submit a Question

• Use the Q&A function to submit questions or comments.
  – To submit a question or comment, click the Q&A window and select “All Panelists” in the “Ask” menu
  – Type your question in the text box and click “Send”
    • Note: Only the presentation team will be able to see your questions and comments
  
• For technical questions, select “Host” in the “Ask” menu

Objectives

• Describe maternal health outcomes for individuals covered by Medicaid and CHIP
• Provide an overview of CMS’s Maternal and Infant Health Initiative
• Describe opportunities to improve maternal health outcomes in Medicaid and CHIP
• Present a framework for applying an equity lens to improve maternal health outcomes
Maternal Health Outcomes among Individuals Covered by Medicaid and CHIP

Lekisha Daniel-Robinson, Mathematica
Medicaid and CHIP: A Vital Source Of Coverage for Maternal Health Care

26% of the 92.1 million Medicaid and CHIP beneficiaries were females ages 15 to 49 in 2021.

41% of U.S. births were paid for by Medicaid in 2021.

Percentage of Births Paid for by Medicaid, 2021

Distribution of Medicaid Births by Maternal Race and Ethnicity, 2021

Notes: Data include the 50 states, DC and Puerto Rico. The U.S. standard birth certificate uses two separate questions (one for Hispanic or Latino origin and one for race) to collect information on maternal race and ethnicity. The Hispanic/Latino category shown in the exhibit includes individuals of any race. The other categories exclude individuals who identify as Hispanic/Latino.
## Variation in Causes of Pregnancy-Related Deaths by Race and Ethnicity

### Ranking of Top Three Underlying Causes of Pregnancy-Related Deaths in 36 States, by Race and Ethnicity, 2017–2019

<table>
<thead>
<tr>
<th>Rank #</th>
<th>Hispanic/Latino</th>
<th>Black</th>
<th>White</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Behavioral health conditions 24.1%</td>
<td>Cardiac and coronary conditions 15.9%</td>
<td>Behavioral health conditions 34.8%</td>
</tr>
<tr>
<td>2</td>
<td>Hemorrhage 21.3%</td>
<td>Cardiomyopathy 13.9%</td>
<td>Hemorrhage 11.6%</td>
</tr>
<tr>
<td>3</td>
<td>Cardiac and coronary conditions 10.6%</td>
<td>Infection 10.6%</td>
<td>Thrombotic embolism 11.9%</td>
</tr>
</tbody>
</table>

### Notes:

Data are not limited to Medicaid and CHIP beneficiaries.

Native Hawaiian or Other Pacific Islander and American Indian or Alaska Native non-Hispanic/Latino populations also have higher rates of pregnancy-related mortality when compared with the White non-Hispanic/Latino population. The total rates and percentages shown in these exhibits include data for Native Hawaiian or Other Pacific Islander and American Indian or Alaska Native non-Hispanic/Latino populations, however results for these groups are not shown separately because the data do not meet criteria for statistical reliability, data quality, or confidentiality.

---

Severe Maternal Morbidity among Medicaid and CHIP Deliveries

372.5

Rate of Maternal Severe Maternal Morbidity (SMM) conditions per 10,000 deliveries covered by Medicaid or CHIP in 2021

Notes: SMM includes unexpected labor and delivery outcomes with substantial maternal health consequences. The CDC defines SMM on the basis of 21 conditions (such as acute renal failure and shock) and procedures (such as blood transfusion or hysterectomy). SMM rates were calculated using T-MSIS Analytic Files (TAF) data and are based on data from 39 states and DC and exclude data from U.S. territories and the following states due to high concern or unusable data quality assessments: CT, MA, MN, MS, NJ, NY, OK, RI, TN, TX, and UT. SMM conditions were identified by a diagnosis or procedure code for one of the 21 SMM conditions within 42 days of the delivery.
### Prevalence of Maternal Mental Health Conditions

<table>
<thead>
<tr>
<th>Condition</th>
<th>Prevalence</th>
</tr>
</thead>
<tbody>
<tr>
<td>Depression</td>
<td>25.4%</td>

Mental Health Treatment among Female Beneficiaries in Medicaid and CHIP

Percentage of Female Medicaid and CHIP Beneficiaries Ages 18–49 Who Reported Receiving Mental Health Treatment in the Past Year, 2021

Notes: This exhibit reflects self-reported insurance coverage at the time of the survey and self-reported receipt of and perceived unmet need for health care. A specialty facility for illicit drug or alcohol use is defined as a hospital (inpatient), a rehabilitation facility (in or outpatient), or a mental health center. Data include the 50 states and DC. Based on Mathematica analysis of National Survey on Drug Use and Health data. Data include survey respondents from the 50 states and DC who reported coverage by Medicaid or CHIP at the time of the survey.
Substance Use Disorders among Female Beneficiaries in Medicaid and CHIP

Percentage of Female Medicaid and CHIP Beneficiaries Ages 13–49 with Substance Use Disorders for Alcohol or Illicit Drugs During the Past Year, Based on Self-Report, 2021

(Lower Rates are Better)

† Results for adolescents are not shown because they are unreliable due to the relative confidence interval width. Because these results are unreliable, statistical significance of difference by age group was not assessed.

Notes: Substance use disorder measures are based on the criteria in the Diagnostic and Statistical Manual of Mental Disorders, 5th edition. These versions of the SUD indicators (labeled “Illicit Drug Use Disorder”) incorporate data from respondents whose use of prescription drugs are categorized as misuse, defined in the survey as use “in any way a doctor did not direct you to use [it or them].” Other illicit drugs include marijuana, cocaine, heroin, hallucinogens, inhalants, and methamphetamine. Prescription opioid use disorders are a subset of illicit drug use disorders.
### High Blood Pressure Prevalence among Female Beneficiaries in Medicaid and CHIP

#### Percentage of Female Beneficiaries Ages 18–49 Covered by Medicaid, CHIP, or Other State-Sponsored Health Plans Who Reported They Were Ever Told They Have High Blood Pressure, 2021

*(Lower Rates Are Better)*

<table>
<thead>
<tr>
<th>Total</th>
<th>By age</th>
<th>By race and ethnicity</th>
</tr>
</thead>
<tbody>
<tr>
<td>21%</td>
<td></td>
<td></td>
</tr>
<tr>
<td>10%</td>
<td>19%</td>
<td>29%</td>
</tr>
<tr>
<td>Ages 18–24</td>
<td>Ages 25–34</td>
<td>Ages 35–49</td>
</tr>
<tr>
<td>Hispanic/Latino</td>
<td>American Indian or Alaska Native</td>
<td>Black</td>
</tr>
<tr>

</tr>
<tr>
<td>More than one race</td>
<td>Other race</td>
<td>White</td>
</tr>
<tr>
<td>33%</td>
<td>24%</td>
<td>21%</td>
</tr>
</tbody>
</table>

Notes: Insurance coverage at the time of the survey and all other data are based on beneficiary self-report. Data on race and Hispanic/Latino origin are presented in the greatest detail possible considering the quality of the data, the amount of missing data and the number of observations. The total includes race and origin groups not shown separately because the data do not meet criteria for statistical reliability, data quality or confidentiality. Ever told they have high blood pressure includes the following responses: “yes,” “yes, but only during pregnancy,” and “told borderline high or pre-hypertensive.” Data include the 50 states, DC, Guam, Puerto Rico, and the U.S. Virgin Islands.
Maternal and Infant Health Initiative

• The Centers for Medicare & Medicaid Services (CMS) launched the Maternal and Infant Health Initiative (MIHI) in July 2014 to focus on opportunities to improve access and outcomes in Medicaid and CHIP
  – Emphasizes the need for a comprehensive life-course approach to maternal and infant health

• Increasing rates of maternal morbidity and mortality and unacceptable disparities led to the White House Blueprint for Addressing the Maternal Health Crisis

• Leading drivers of maternal morbidity and mortality in Medicaid and CHIP are associated with treatable conditions such as mental health, substance use disorders, and hypertension and cardiovascular conditions
Improving Maternal Health and Infant Health Quality

**Maternal Outcomes**
Primary aims: Eliminate preventable maternal mortality, SMM, and inequities

- Improved access to community and health-related social supports
- Improved birth spacing, early initiation of prenatal care, healthy start of possible subsequent pregnancy

**Infant Outcomes**
Primary aims: Reduce infant mortality and eliminate inequities in infant mortality rates

- Healthy start of possible subsequent pregnancy, early initiation of prenatal care
- Healthy possible subsequent birth

C-section = cesarean section; NICU = neonatal intensive care unit; SMM = severe maternal morbidity
Improving the Maternal Health Continuum

Maternal Outcomes

Primary aims: Eliminate preventable maternal mortality, SMM, and inequities

Improved access to community and health-related social supports

Screenings and vaccinations
Lower risk for C-section delivery
Decreased severe maternal morbidity
Decreased postpartum complications
Increased access to contraceptive care, better management of chronic diseases and mental health conditions, increased connection to ongoing care

Improved birth spacing, early initiation of prenatal care, healthy start of possible subsequent pregnancy

Pregnancy        Labor and delivery   Postpartum   Interpregnancy   Subsequent pregnancy

Overall health status

C-section = cesarean section; SMM = severe maternal morbidity
CMS Maternity Care Action Plan

**Coverage & Access to Care**
- Access to coverage for up to one year postpartum
- Transitions to coverage through the Marketplace
- Access to full range of contraception at no cost

**Data**
- Medicaid quality measures – Maternity Core Set
- Data-sharing among clinical providers, Community Based Organizations (CBOs), and other agencies

**Quality of Care**
- Birthing-Friendly Designation
- Technical assistance to support states in driving quality improvements
- Support evidence informed safety practices

**Workforce**
- Integrated care delivery teams
- Expand access to birthing supports
- Expansion of community-based services

**Social Supports**
- Screening for health-related social needs (HRSN)
- Collaboration with and connections to social support services
Federal Resources to Improve Maternal Health Outcomes

**Centers for Disease Control and Prevention (CDC)**
- Respectful Care MMWR
- The Hypertension in Pregnancy Change Package (HCCP)
- Automated Research file for PRAMS

**Substance Abuse and Mental Health Services Administration (SAMHSA) & the Office on Women’s Health**
- Task Force on Maternal Mental Health

**National Institutes of Health (NIH)**
- Implementing a Maternal Health and Pregnancy Outcomes Vision for Everyone (IMPROVE) Initiative
- IMPROVE Maternal Health Centers of Excellence
- IMPROVE Connecting the Community for Maternal Health Challenge
- RADx Tech for Maternal Health Challenge

**Health Resources and Services Administration (HRSA)**
- HRSA’s National Maternal Mental Health Hotline
- HRSA-supported guidelines for women’s preventive services
- HRSA Screening and Treatment for Maternal Mental Health and Substance Use Disorders
- Alliance for Innovation on Maternal Health (AIM) Patient Safety Bundles

**Agency for Healthcare Research and Quality (AHRQ)**
- Respectful Care
- Perinatal Safety Toolkit
Applying an Equity Lens to Advance Health Equity-Focused Strategies to Improve Maternal Health

Rishi Manchanda MD, MPH, HealthBeginns
Health and social inequities are experienced as harm.

Social arrangements, including structural racism, put some people in harm’s way.

Equity is not just the absence of harm or unjust differences, it’s the presence of systems that promote and preserve healing, opportunity, and justice.

Since structural violence and harm is segregated by location, institutional strategies to advance health and social equity must be place-based, goal-directed, and work across levels.

Courageous leaders need support and solidarity to implement these strategies, and to transform their institutions, relationships, and communities in the process.
Focus on work within and across levels of transformation to achieve health equity goals.

Compass for Health Equity Transformation

State Medicaid Program
Help transform social policies and structures

Community Ecosystem
Strengthen cross-sector relationships & ecosystems

Healthcare System
Drive institutional transformation & culture change

Programs & Care
Improve services and achieve performance goals for health care equity & social needs

Advance health equity & justice with multilevel strategies

Citation: Rishi Manchanda, Kathryn Jantz, Sadena Thevarajah. Compass for Health Equity Transformation. HealthBegins. Los Angeles, Revised for State Audiences 2024
What is Equity-focused, Upstream Quality Improvement (QI)?
When it comes to advancing equity-focused QI, what challenges are you or others experiencing?

<table>
<thead>
<tr>
<th>Healthcare System</th>
<th>Community Ecosystem</th>
<th>State Medicaid Program</th>
</tr>
</thead>
<tbody>
<tr>
<td>“Some staff don’t think equity is quality work because we should be focusing on all patients”</td>
<td>“How do we go from collecting REaL data to acting on it?”</td>
<td>“How can we help MCOs and providers drive equity-focused QI?”</td>
</tr>
<tr>
<td>“How are we supposed to help address patients’ social needs?”</td>
<td>“Are we improving social needs outcomes, or just closing the loop?”</td>
<td>“How do we garner support for and navigate the politics of addressing inequities?”</td>
</tr>
<tr>
<td>“How do we engage patients in equity-focused QI?”</td>
<td>“How do we align our equity efforts better?”</td>
<td>“How do we address equity in an environment with variable access to care statewide”</td>
</tr>
</tbody>
</table>
Health Equity means that everyone has the opportunities and resources they need to be as healthy as possible and that no one is disadvantaged due to social circumstances or policies.

Healthcare Equity more narrowly describes equity in the experience of accessing and interacting with the health care system and its organizations.
Health Equity Influenced by Social Drivers of Health

- **Social Risk Factors & Social Needs:** Specific individual-level adverse social conditions and experiences
- **Social Drivers of Health:** Underlying community-wide social, economic, and physical conditions in which people are born, grow, live, work, and age
- **Structural Drivers of Health Equity:** The societal norms; macroeconomic, social & health policies; and the structural mechanisms that shape social hierarchy and gradients
## Equity-focused Upstream QI Approach

### Get Grounded
- **Step 1**: Identify Patterns of Inequities
- **Step 2**: Identify Priority Populations and Places
- **Step 3**: Identify Social & Structural Drivers of Health Care Inequities

### Engage & Reach Out
- **Step 4**: Identify Opportunities for Equity-Focused, Upstream Improvement
- **Step 5**: Set Aims & Measurement Plan

### Look Within
- **Step 6**: Select Potential Solutions & Early Wins
- **Step 7**: Design Equity-Focused Upstream QI Campaign

### Launch
- **Step 8**: Equity-focused, upstream QI campaign

### Learn & Share
- **Step 9**: Learn & Share progress, challenges, insights, and opportunities to address root causes with partners & coalitions

### Reinvest
- **Step 10**: Reinvest returns, value, and capacity generated by campaign into other QI efforts and community
Equity-Focused Upstream QI Campaigns Can Work Across All Levels

Priority Population: Pregnant people disproportionately experiencing antepartum or postpartum depression

Social Driver of Health Inequity: Food Insecurity

Utilization Goal: Within 24 months, achieve a 20% increase in the rate of depression screenings in the perinatal period and reduce related racial and ethnic disparities by 50%.

Equity-focused goal: Decrease racial inequities in perinatal depression screening rates by 50%

Upstream Goal Contributing to Overall Goal: Reduce food insecurity by 10% for individuals in the perinatal period, including those who screen positive for depression
Opportunities for Medicaid and CHIP Programs to Apply and Advance an Equity Lens
Equity Opportunities Exist Across Levels of Prevention and Intervention

Questions
• Assessment:
  – Select a condition (like maternal mental health)
  – What level(s) of intervention and what level(s) of prevention are you enabling to either prevent or improve this condition?

• Planning:
  – What additional opportunities exist to lead, partner, or support equity-focused efforts to address this condition across levels of intervention or prevention?

Levels of Intervention
• Systems
  • Improve effectiveness of services
  • Build or transform institutional capabilities
• Ecosystems
• State-level

Levels of Prevention
• Health promotion
• Prevention
  • Primary prevention
  • Secondary prevention
• Treatment (aka tertiary prevention)
# Upstream Strategy Compass - Maternal Mental Health

An illustrative example of a portfolio of health equity improvement opportunities that Medicaid and CHIP programs can consider.

<table>
<thead>
<tr>

Questions and Discussion

Lekisha Daniel-Robinson, Mathematica
Upcoming Events and Opportunities

Lekisha Daniel-Robinson, Mathematica
Maternal Health Webinar Series

• Maternal Mental Health Screening, Treatment, and Improvement Strategies (June 4, 2024, 2:00 pm ET)

• Decreasing Fragmentation in Maternal Substance Use Disorder Screening and Treatment (June 25, 2024, 2:00 pm ET)

• Addressing Hypertension Before, During, and After Pregnancy (July 16, 2024, 2:00 pm ET)

• Medicaid and CHIP Program Collaboration with Hospitals on AIM Bundles (August 20, 2024, 2:00 pm ET)
Maternal Health Affinity Groups

• Expression of Interest Webinar (August 6, 2024, 2:00 pm ET)
  – Action-oriented affinity groups will support state Medicaid and CHIP programs and their partners in identifying, testing, and implementing evidence-based change ideas to address maternal health
  – Two Affinity Group Topics:
    • **Addressing Maternal Mental Health and Substance Use**
    • **Improving Maternal Hypertension Control**
  – More information will be available in early Summer 2024
Thank you for participating!

• Please **complete the evaluation** as you exit the webinar.

• If you have any **questions**, or we didn’t have time to get to your question, **please email** [MedicaidCHIPQI@cms.hhs.gov](mailto:MedicaidCHIPQI@cms.hhs.gov)
