Quality of Care for Adults in Medicaid: Findings from the 2020 Adult Core Set

Chart Pack

January 2022

This chart pack is a product of the Technical Assistance and Analytic Support for the Medicaid and CHIP Quality Measurement and Improvement Program, sponsored by the Center for Medicaid and CHIP Services. The technical assistance team is led by Mathematica, in collaboration with the National Committee for Quality Assurance, Center for Health Care Strategies, AcademyHealth, and Aurrera Health Group.

About the FFY 2020 Adult Core Set

Medicaid plays an important role in health care coverage for adults, covering almost 47 million adults in federal fiscal year (FFY) 2020, including over 28 million non-disabled adults under age 65, 11 million non-elderly with disabilities, and 6 million adults age 65 and older.\(^1\) As the U.S. Department of Health & Human Services agency responsible for ensuring quality health care coverage for Medicaid beneficiaries, the Centers for Medicare & Medicaid Services (CMS) plays a key role in promoting quality health care for adults in Medicaid. CMS’s 2020 core set of health care quality measures for adults covered by Medicaid (referred to as the Adult Core Set) supports federal and state efforts to collect, report, and use a standardized set of measures to drive improvement in the quality of care provided to Medicaid beneficiaries. The 2020 Adult Core Set includes 33 measures.\(^2\)

This Chart Pack summarizes state reporting on the quality of health care furnished to adults covered by Medicaid during FFY 2020, which generally covers care delivered in calendar year 2019. The Chart Pack includes detailed analysis of state performance on 28 publicly reported measures.\(^3\) For a measure to be publicly reported, data must be provided to CMS by at least 25 states and meet CMS standards for data quality. These measures address the following domains of care:

- Primary Care Access and Preventive Care
- Maternal and Perinatal Health
- Care of Acute and Chronic Conditions
- Behavioral Health Care
- Long-Term Services & Supports

---

\(^2\) Two measures were retired from the 2020 Adult Core Set and two measures were added. Information about the updates to the 2020 Core Sets is available at [https://www.medicaid.gov/federal-policy-guidance/downloads/cib111919.pdf](https://www.medicaid.gov/federal-policy-guidance/downloads/cib111919.pdf).

\(^3\) The count of 28 publicly reported measures includes the Consumer Assessment of Healthcare Providers and Systems (CAHPS) measure. State-specific performance data are not available for this measure.
OVERVIEW OF STATE REPORTING OF THE 2020 ADULT CORE SET
Number of Adult Core Set Measures Reported by States, FFY 2020

States reported a median of 22 Adult Core Set measures for FFY 2020.

Sources: Mathematica analysis of MACPro reports for the FFY 2020 reporting cycle as of June 18, 2021 and National Core Indicators (NCI) data submitted by states to the NCI National Team for the July 1, 2019 to June 30, 2020 data collection period.

Notes: The term “states” includes the 50 states, the District of Columbia, and Puerto Rico.

The following states did not report Adult Core Set measures for FFY 2020: Alaska and Montana.

The 2020 Adult Core Set includes 33 measures. This chart includes all Adult Core Set measures that states reported for the FFY 2020 reporting cycle.

The state median includes the total number of measures reported by each state. Unless otherwise specified, states used Adult Core Set specifications to calculate the measures. Some states calculated Adult Core Set measures using “other specifications.” Measures were denoted as using “other specifications” when the state deviated substantially from the Adult Core Set specifications, such as using alternate data sources, different populations, or other methodologies.
Number of States Reporting the Adult Core Set Measures, FFY 2020

23 states reported more Adult Core Set measures for FFY 2020 than for FFY 2019.

Sources: Mathematica analysis of MACPro reports for the FFY 2020 reporting cycle as of June 18, 2021 and National Core Indicators (NCI) data submitted by states to the NCI National Team for the July 1, 2019 to June 30, 2020 data collection period.

Notes: The term “states” includes the 50 states, the District of Columbia, and Puerto Rico.

The 2020 Adult Core Set includes 33 measures. This chart includes all Adult Core Set measures that states reported for the FFY 2020 reporting cycle. Unless otherwise specified, states used Adult Core Set specifications to calculate the measures. Some states calculated Adult Core Set measures using “other specifications.” Measures were denoted as using “other specifications” when the state deviated substantially from the Adult Core Set specifications, such as using alternate data sources, different populations, or other methodologies.

AOD = Alcohol and Other Drug; CAHPS = Consumer Assessment of Healthcare Providers and Systems; COPD = Chronic Obstructive Pulmonary Disease; ED = Emergency Department; HIV = Human Immunodeficiency Virus.
Number of States Reporting the Adult Core Set Measures, FFY 2018–FFY 2020

State reporting increased for 28 of the 29 measures included in the Adult Core Set for all three years.

Follow-Up After Hospitalization for Mental Illness: Age 18 and Older
Chlamydia Screening in Women Ages 21 to 24
Breast Cancer Screening
Cervical Cancer Screening
Diabetes Screening for People with Schizophrenia or Bipolar Disorder Using Antipsychotic Medications
Adherence to Antipsychotic Medications for Individuals with Schizophrenia
Antidepressant Medication Management
Asthma Medication Ratio: Ages 19 to 64
Follow-Up After ED Visit for AOD Abuse or Dependence*
Prenatal and Postpartum Care: Postpartum Care
Follow-Up After ED Visit for Mental Illness*
Initiation and Engagement of Alcohol and Other Drug Abuse or Dependence Treatment
Adult Body Mass Index Assessment
Plan All-Cause Readmissions
CAHPS Health Plan Survey 5.0H, Adult Version (Medicaid)
PQI 01: Diabetes Short-Term Complications Admission Rate

*The FUA-AD and FUM-AD measures were previously included in the Adult Core Set as a single measure with different specifications. Chart is continued on the next slide.

Populations Included in Frequently Reported Adult Core Set Measures for FFY 2020, By Domain

**Behavioral Health Care**
- Use of Opioids at High Dosage in Persons Without Cancer: 11
- Concurrent Use of Opioids and Benzodiazepines: 14
- Initiation and Engagement of Alcohol and Other Drug Abuse or Dependence Treatment: 19
- Medical Assistance With Smoking and Tobacco Use Cessation: 13
- Follow-Up After ED Visit for AOD Abuse or Dependence: 19
- Follow-Up After ED Visit for Mental Illness: 18
- Follow-Up After Hospitalization for Mental Illness: Age 18 and Older: 19
- Antidepressant Medication Management: 21
- Adherence to Antipsychotic Medications for Individuals with Schizophrenia: 21
- Diabetes Screening for People with Schizophrenia or Bipolar Disorder Who Are Using Antipsychotic Medications: 23

**Long-Term Services and Supports**
- National Core Indicators Survey: 25

Sources: Mathematica analysis of MACPro reports for the FFY 2020 reporting cycle as of June 18, 2021 and National Core Indicators (NCI) data submitted by states to the NCI National Team for the July 1, 2019 to June 30, 2020 data collection period.

Notes: This chart includes measures that were reported by at least 25 states for FFY 2020 that met CMS standards for quality. “Dual eligibles” refers to beneficiaries dually enrolled in both Medicare and Medicaid. This chart excludes the Consumer Assessment of Healthcare Providers and Systems (CAHPS) measure.
Median Performance Rates on Frequently Reported Adult Core Set Measures, FFY 2020, By Domain

**Primary Care Access and Preventive Care**
- Breast Cancer Screening: 54.7%
- Cervical Cancer Screening: 56.7%
- Chlamydia Screening in Women Ages 21 to 24: 60.5%
- Adult Body Mass Index Assessment: 85.6%
- Flu Vaccinations for Adults Ages 18 to 64: 44.8%

**Maternal and Perinatal Health**
- Prenatal and Postpartum Care: Postpartum Care: 72.3%
- Contraceptive Care: Postpartum Women Ages 21 to 44: Most or Moderately Effective Method of Contraception 3-days Postpartum: 11.9%
- Contraceptive Care: Postpartum Women Ages 21 to 44: Most or Moderately Effective Method of Contraception 60-days Postpartum: 41.6%
- Contraceptive Care: Postpartum Women Ages 21 to 44: Long-Acting Reversible Method of Contraception (LARC) 3-days Postpartum: 1.9%
- Contraceptive Care: Postpartum Women Ages 21 to 44: Long-Acting Reversible Method of Contraception (LARC) 60-days Postpartum: 12.6%
- Contraceptive Care: All Women Ages 21 to 44: Most or Moderately Effective Method of Contraception: 24.5%
- Contraceptive Care: All Women Ages 21 to 44: Long-Acting Reversible Method of Contraception (LARC): 5.1%

All medians are reported as percentages except for measures PQI 01, PQI 05, PQI 08, and PQI 15, which are reported as rates per 100,000 beneficiary months.

Chart is continued on the next slide.
Median Performance Rates on Frequently Reported Adult Core Set Measures, FFY 2020, By Domain (continued)

**Care of Acute and Chronic Conditions**

- Comprehensive Diabetes Care: Hemoglobin A1c Poor Control (>9.0%) - 39.0*
- PQI 01: Diabetes Short-Term Complications Admission Rate - 20.1*
- PQI 05: COPD or Asthma in Older Adults Admission Rate - 56.4*
- PQI 08: Heart Failure Admission Rate - 24.4*
- PQI 15: Asthma in Younger Adults Admission Rate - 6.5*
- Asthma Medication Ratio: Ages 19 to 50 - 53.7
- Asthma Medication Ratio: Ages 51 to 64 - 54.6
- Asthma Medication Ratio: Total (Ages 19 to 64) - 53.7
- Controlling High Blood Pressure - 59.2

All medians are reported as percentages except for measures PQI 01, PQI 05, PQI 08, and PQI 15, which are reported as rates per 100,000 beneficiary months.
*Lower rates are better for this measure.
Chart is continued on the next slide.
All medians are reported as percentages except for measures PQI 01, PQI 05, PQI 08, and PQI 15, which are reported as rates per 100,000 beneficiary months.

*Lower rates are better for this measure.

Chart is continued on the next slide.
Median Performance Rates on Frequently Reported Adult Core Set Measures, FFY 2020, By Domain (continued)

All medians are reported as percentages except for measures PQI 01, PQI 05, PQI 08, and PQI 15, which are reported as rates per 100,000 beneficiary months.
Chart is continued on the next slide.
Median Performance Rates on Frequently Reported Adult Core Set Measures, FFY 2020, By Domain (continued)

### Behavioral Health Care, continued

- Adherence to Antipsychotic Medications for Individuals with Schizophrenia: 62.5%
- Diabetes Screening for People with Schizophrenia or Bipolar Disorder Who Are Using Antipsychotic Medications: 80.3%

### Long-Term Services and Supports

- National Core Indicators Survey: Life Decisions Scale: 68.6%
- National Core Indicators Survey: Everyday Choices Scale: 92.9%
- National Core Indicators Survey: Always Has A Way To Get Places: 95.0%

Sources: Mathematica analysis of MACPro reports for the FFY 2020 reporting cycle as of June 18, 2021 and National Core Indicators (NCI) data submitted by states to the NCI National Team for the July 1, 2019 to June 30, 2020 data collection period.

Notes: This chart includes measures that were reported by at least 25 states for FFY 2020 that met CMS standards for data quality. All medians are reported as percentages except for measures PQI 01, PQI 05, PQI 08, and PQI 15, which are reported as rates per 100,000 beneficiary months. This chart excludes the Plan All-Cause Readmissions measure, which uses a different summary statistic than those in this chart.

*Lower rates are better for this measure.*
Primary Care Access and Preventive Care

Medicaid provides access to wellness visits and other preventive health care services, including immunizations, screenings, and counseling to support healthy living. Access to regular primary care and services can prevent infectious and chronic disease and other health conditions, help people live longer, healthier lives, and improve the health of the population.

Five Adult Core Set measures of primary care access and preventive care were available for analysis for FFY 2020. These measures are among the most frequently reported measures in the Adult Core Set.

- Breast Cancer Screening
- Cervical Cancer Screening
- Chlamydia Screening in Women Ages 21 to 24
- Adult Body Mass Index Assessment
- Flu Vaccinations for Adults Ages 18 to 64
Breast cancer causes approximately 42,000 deaths in the United States each year. The U.S. Preventive Services Task Force recommends that women between the ages of 50 and 74 undergo mammography screening once every two years. Early detection via mammography screening and subsequent treatment can reduce breast cancer mortality for women in this age range.

**Percentage of Women* Ages 50 to 74 who had a Mammogram to Screen for Breast Cancer (BCS-AD), FFY 2020 (n = 47 states)**

A median of 55 percent of women received a mammogram to screen for breast cancer (47 states).
Breast Cancer Screening (continued)

Geographic Variation in the Percentage of Women* who had a Mammogram to Screen for Breast Cancer (BCS-AD), FFY 2020 (n = 47 states)

Source: Mathematica analysis of MACPro reports for the FFY 2020 reporting cycle as of June 18, 2021.

*Data displayed in this chart include women ages 50 to 64 for 32 states and ages 50 to 74 for 15 states.
Cervical Cancer Screening

Approximately 14,500 new cases of cervical cancer and 4,300 deaths due to cervical cancer occur in the United States each year. The U.S. Preventive Services Task Force recommends that women ages 21 to 65 receive regular screening for cervical cancer through either a cervical cytology (Pap smear) test or, for women ages 30 to 65, a combination of cervical cytology and human papillomavirus (HPV) testing. When pre-cancerous lesions or early stage cancer are detected through screening, cervical cancer can usually be prevented or treated effectively.

Percentage of Women Ages 21 to 64 who were Screened for Cervical Cancer (CCS-AD), FFY 2020 (n = 47 states)

Source: Mathematica analysis of MACPro reports for the FFY 2020 reporting cycle as of June 18, 2021.

Note: This measure shows the percentage of women ages 21 to 64 who were screened for cervical cancer using one of the following criteria: (1) women ages 21 to 64 who had cervical cytology performed within the last 3 years; (2) women ages 30 to 65 who had cervical high-risk human papillomavirus (hrHPV) testing performed within the last 5 years; or (3) women ages 30 to 64 who had cervical cytology/high-risk human papillomavirus (hrHPV) co-testing within the last 5 years.

A median of 57 percent of women ages 21 to 64 were screened for cervical cancer (47 states).
Geographic Variation in the Percentage of Women Ages 21 to 64 who were Screened for Cervical Cancer (CCS-AD), FFY 2020 (n = 47 states)

Source: Mathematica analysis of MACPro reports for the FFY 2020 reporting cycle as of June 18, 2021.
Chlamydia Screening in Women Ages 21 to 24

Chlamydia is the most commonly reported sexually transmitted infection and easy to cure when it is detected. However, most people have no symptoms and are not aware they are infected. Left untreated, chlamydia can affect a woman’s ability to have children. Recommended well care for young adult women who are sexually active includes annual screening for chlamydia. The Adult Core Set reports chlamydia screening rates for women ages 21 to 24.

**Percentage of Sexually Active Women Ages 21 to 24 who were Screened for Chlamydia (CHL-AD), FFY 2020 (n = 48 states)**

![Bar Chart]

Source: Mathematica analysis of MACPro reports for the FFY 2020 reporting cycle as of June 18, 2021.

Note: This measure shows the percentage of women ages 21 to 24 who were identified as sexually active and who had at least one test for chlamydia during the measurement year.
Geographic Variation in the Percentage of Sexually Active Women Ages 21 to 24 who were Screened for Chlamydia (CHL-AD), FFY 2020 (n = 48 states)

Source: Mathematica analysis of MACPro reports for the FFY 2020 reporting cycle as of June 18, 2021.
Adult Body Mass Index Assessment

Monitoring of body mass index (BMI) helps providers identify adults who are overweight or obese and at increased risk for related health complications. The Adult BMI Assessment measure shows the percentage of beneficiaries with an outpatient visit whose BMI value was documented in the medical record.

Percentage of Adults* who had an Outpatient Visit and whose Body Mass Index Value was Documented in the Medical Record (ABA-AD), FFY 2020 (n = 39 states)

A median of 86 percent of adults with an outpatient visit had their BMI value documented in the medical record (39 states)

Source: Mathematica analysis of MACPro reports for the FFY 2020 reporting cycle as of June 18, 2021.
Note: This measure shows the percentage of adults ages 18 to 74 who had an outpatient visit and whose body mass index (BMI) was documented during the measurement year or the year prior to the measurement year.
*Data displayed in this chart include adults ages 18 to 64 for 23 states and ages 18 to 74 for 16 states.
Geographic Variation in the Percentage of Adults* who had an Outpatient Visit with a Body Mass Index Value Documented in the Medical Record (ABA-AD), FFY 2020 (n = 39 states)

Source: Mathematica analysis of MACPro reports for the FFY 2020 reporting cycle as of June 18, 2021.
*Data displayed in this chart include adults ages 18 to 64 for 23 states and ages 18 to 74 for 16 states.
Flu Vaccinations for Adults Ages 18 to 64

Influenza (flu) is a highly contagious respiratory disease that can result in serious illness, hospitalization, and even death. Flu vaccination can prevent infections and reduce medical visits, hospitalizations, and deaths. In particular, flu vaccination is an important preventive tool for people with chronic health conditions who are at high risk for flu complications. The Centers for Disease Control and Prevention (CDC) recommends an annual flu vaccine for everyone six months and older. This measure assesses the percentage of adults ages 18 to 64 who reported receiving a flu vaccination. Performance on this measure is being publicly reported for the first time for FFY 2020.

**Percentage of Adults Ages 18 to 64 who Received a Flu Vaccination (FVA-AD), FFY 2020 (n = 28 states)**

A median of **45** percent of adults ages 18 to 64 received an influenza vaccination (28 states)

Source: Mathematica analysis of MACPro reports for the FFY 2020 reporting cycle as of June 18, 2021.

Notes: This measure shows the percentage of adults ages 18 to 64 who reported that they received either a flu shot or flu spray in the nose between July 1 of the measurement year and the date when the CAHPS 5.0H Adult Survey was completed for the measurement year. Rates are the percentage of beneficiaries answering “Yes” among the beneficiaries who answered “Yes” or “No” to the survey question.
Flu Vaccinations for Adults Ages 18 to 64 (continued)

Geographic Variation in the Percentage of Adults Ages 18 to 64 who Received a Flu Vaccination (FVA-AD), FFY 2020 (n = 28 states)

Maternal and Perinatal Health

As the largest payer for maternity care in the United States, Medicaid has an important role to play in improving maternal and perinatal health outcomes. Despite improvements in access to coverage and care, the rate of births reported as preterm or low birth weight among women in Medicaid is higher than the rate for those who are privately insured. The health of a child is affected by a mother’s health and the care she receives during pregnancy. When women access the health care system for maternity care, an opportunity is presented to promote services and behaviors to optimize their health and the health of their children.

Three Adult Core Set measures of maternal and perinatal health were available for analysis for FFY 2020.

- Prenatal and Postpartum Care: Postpartum Care
- Contraceptive Care: Postpartum Women Ages 21 to 44
- Contraceptive Care: All Women Ages 21 to 44

Prenatal and Postpartum Care: Postpartum Care

Postpartum visits provide an opportunity to assess women’s physical recovery from pregnancy and childbirth, and to address chronic health conditions (such as diabetes and hypertension), mental health status (including postpartum depression), and family planning (including contraception and inter-conception counseling). The postpartum care measure assesses how often women delivering a live birth received timely postpartum care (between 7 and 84 days after delivery).

**Percentage of Women Delivering a Live Birth who had a Postpartum Care Visit on or Between 7 and 84 Days after Delivery (PPC-AD), FFY 2020 (n = 39 states)**

A median of **72** percent of women delivering a live birth had a postpartum care visit on or between 7 and 84 days after delivery.

Source: Mathematica analysis of MACPro reports for the FFY 2020 reporting cycle as of June 18, 2021.

Notes: This measure shows the percentage of deliveries of live births on or between October 8 of the year prior to the measurement year and October 7 of the measurement year that had a postpartum visit on or between 7 and 84 days after delivery. Specifications for this measure changed substantially for FFY 2020 and rates are not comparable with rates for previous years. This chart excludes Minnesota and Oregon, which reported the measure but did not use Core Set specifications.
Geographic Variation in the Percentage of Women Delivering a Live Birth who had a Postpartum Care Visit on or Between 7 and 84 Days after Delivery (PPC-AD), FFY 2020 (n = 39 states)

Source: Mathematica analysis of MACPro reports for the FFY 2020 reporting cycle as of June 18, 2021.
Note: This chart excludes Minnesota and Oregon, which reported the measure but did not use Core Set specifications.
Access to effective contraceptive care during the postpartum period can improve birth spacing and timing and improve the health outcomes of women and children. This measure assesses access to contraceptive care, including the percentage of postpartum women ages 21 to 44 who were provided a most or moderately effective method of contraception as well as the percentage who were provided a long-acting reversible method of contraception (LARC) within 3 and 60 days of delivery.

**Percentage of Postpartum Women Ages 21 to 44 who had a Live Birth and who were Provided a Most Effective or Moderately Effective Method of Contraception and the Percentage who were Provided a Long-Acting Reversible Method of Contraception (LARC) within 3 and 60 Days of Delivery (CCP-AD), FFY 2020**

Among postpartum women ages 21 to 44 who had a live birth, a median of 42 percent received a most or moderately effective method of contraception within 60 days of delivery (34 states).

*Source: Mathematica analysis of MACPro reports for the FFY 2020 reporting cycle as of June 18, 2021.*

*Notes: This measure shows the percentage of postpartum women ages 21 to 44 who had a live birth and who were provided: (1) a most effective or moderately effective method of contraception within 3 and 60 days of delivery; (2) a long-acting reversible method of contraception (LARC) within 3 and 60 days of delivery. Data were suppressed for the LARC 3-day's postpartum rate for Wyoming due to small cell sizes.*
Contraceptive Care: Postpartum Women Ages 21 to 44: Most or Moderately Effective Method of Contraception 3-days Postpartum (continued)

Geographic Variation in the Percentage of Postpartum Women Ages 21 to 44 who had a Live Birth and who were Provided a Most Effective or Moderately Effective Method of Contraception within 3 Days of Delivery (CCP-AD), FFY 2020 (n = 33 states)

Source: Mathematica analysis of MACPro reports for the FFY 2020 reporting cycle as of June 18, 2021.
Note: This chart excludes Kansas, which reported the measure but did not provide data for the most or moderately effective method of contraception 3-days postpartum rate.
Contraceptive Care: Postpartum Women Ages 21 to 44: Most or Moderately Effective Method of Contraception 60-days Postpartum (continued)

Geographic Variation in the Percentage of Postpartum Women Ages 21 to 44 who had a Live Birth and who were Provided a Most Effective or Moderately Effective Method of Contraception within 60 Days of Delivery (CCP-AD), FFY 2020 (n = 34 states)

Source: Mathematica analysis of MACPro reports for the FFY 2020 reporting cycle as of June 18, 2021.
Contraceptive Care: Postpartum Women Ages 21 to 44: LARC 3-days Postpartum (continued)

Geographic Variation in the Percentage of Postpartum Women Ages 21 to 44 who had a Live Birth and who were Provided a Long-Acting Reversible Method of Contraception (LARC) within 3 Days of Delivery (CCP-AD), FFY 2020 (n = 31 states)

Source: Mathematica analysis of MACPro reports for the FFY 2020 reporting cycle as of June 18, 2021
Note: This chart excludes Kansas and North Dakota, which reported the measure but did not provide data for the LARC 3-days postpartum rate. Data were suppressed for Wyoming due to small cell sizes.
Geographic Variation in the Percentage of Postpartum Women Ages 21 to 44 who had a Live Birth and who were Provided a Long-Acting Reversible Method of Contraception (LARC) within 60 Days of Delivery (CCP-AD), FFY 2020 (n = 34 states)

Source: Mathematica analysis of MACPro reports for the FFY 2020 reporting cycle as of June 18, 2021.
Contraceptive Care: All Women Ages 21 to 44

Increasing access to effective forms of contraception is a strategy for reducing unintended pregnancy. This measure assesses the percentage of women ages 21 to 44 at risk of unintended pregnancy who were provided a most or moderately effective method of contraception as well as the percentage who were provided a long-acting reversible method of contraception (LARC). The goal of this measure is to provide an indicator to assess the provision of most or moderately effective contraceptive methods and see where there is room for improvement. Research suggests that about 44 percent of women ages 21 to 44 enrolled in Medicaid are not at risk of unintended pregnancy, which should be considered when assessing the potential for improvement on this measure.¹ Performance on this measure is being publicly reported for the first time for FFY 2020.

Among women ages 21 to 44 at risk of unintended pregnancy, a median of 25 percent received a most or moderately effective method of contraception (31 states)

Source: Mathematica analysis of MACPro reports for the FFY 2020 reporting cycle as of June 18, 2021.

Note: This measure shows the percentage of women ages 21 to 44 at risk of unintended pregnancy who were provided: (1) a most or moderately effective method of contraception; (2) a long-acting reversible method of contraception (LARC). More information is available at https://opa.hhs.gov/sites/default/files/2020-07/interpreting-rates-for-contraceptive-care-measures.pdf.
Geographic Variation in the Percentage of All Women Ages 21 to 44 at Risk of Unintended Pregnancy who were Provided a Most Effective or Moderately Effective Method of Contraception (CCW-AD), FFY 2020 (n = 31 states)

Source: Mathematica analysis of MACPro reports for the FFY 2020 reporting cycle as of June 18, 2021.
Geographic Variation in the Percentage of All Women Ages 21 to 44 at Risk of Unintended Pregnancy who were Provided a Long-Acting Reversible Method of Contraception (LARC) (CCW-AD), FFY 2020 (n = 31 states)

State Median: 5.1%

Source: Mathematica analysis of MACPro reports for the FFY 2020 reporting cycle as of June 18, 2021.
Care of Acute and Chronic Conditions

The extent to which adults receive safe, timely, and effective care for acute and chronic conditions is a key indicator of the quality of care provided in Medicaid. Visits for routine screening and monitoring play an important role in managing the health care needs of people with acute and chronic conditions, potentially avoiding or slowing disease progression, and reducing costly avoidable hospital admissions and emergency department visits. The prevalence of chronic illnesses like diabetes is high among adults covered by Medicaid. Ensuring that adults receive timely, quality care may reduce the need for more costly care later and improve their chances of leading healthy, productive lives.

Eight Adult Core Set measures of the care of acute and chronic conditions were available for analysis for FFY 2020.

- Comprehensive Diabetes Care: Hemoglobin A1c (HbA1c) Poor Control (>9.0%)
- PQI 01: Diabetes Short-Term Complications Admission Rate
- PQI 05: Chronic Obstructive Pulmonary Disease (COPD) or Asthma in Older Adults Admission Rate
- PQI 08: Heart Failure Admission Rate
- PQI 15: Asthma in Younger Adults Admission Rate
- Plan All-Cause Readmissions
- Asthma Medication Ratio: Ages 19 to 64
- Controlling High Blood Pressure

Comprehensive Diabetes Care: Hemoglobin A1c (HbA1c) Poor Control (>9.0%)

Among diabetic patients, a Hemoglobin A1c (HbA1c) level greater than 9.0% indicates poor control of diabetes. Poor control of diabetes is a risk factor for complications, including renal failure, blindness, and neurologic damage. This measure shows the percentage of adults with diabetes who had Hemoglobin A1c in poor control (>9.0%) during the measurement year.

Source: Mathematica analysis of MACPro reports for the FFY 2020 reporting cycle as of June 18, 2021.

Notes: This measure shows the percentage of adults ages 18 to 75 with diabetes (type 1 or type 2) who had Hemoglobin A1c in poor control (>9.0%) during the measurement year. This chart excludes Arkansas, which calculated the measure but did not use Adult Core Set specifications.

*Data displayed in this chart include adults ages 18 to 64 for 16 states and ages 18 to 75 for 15 states.
Geographic Variation in the Percentage of Adults* with Diabetes (Type 1 or Type 2) who had Hemoglobin A1c in Poor Control (>9.0%) (HPC-AD), FFY 2020 (n = 31 states) [Lower rates are better for this measure]

Source: Mathematica analysis of MACPro reports for the FFY 2020 reporting cycle as of June 18, 2021.

Note: This chart excludes Arkansas, which calculated the measure but did not use Adult Core Set specifications.

*Data displayed in this chart include adults ages 18 to 64 for 16 states and ages 18 to 75 for 15 states.
PQI 01: Diabetes Short-Term Complications Admission Rate

In the absence of access to high quality outpatient diabetes care, diabetic ketoacidosis, hyperosmolarity, and comas are acute, life-threatening complications of diabetes that can result in inpatient hospital admissions. Inpatient hospital admissions for these complications can be an indicator that diabetes is not being properly prevented or managed. This measure assesses the frequency of inpatient hospital admissions to treat short-term complications of diabetes among adult Medicaid beneficiaries.

**Number of Inpatient Hospital Admissions for Diabetes Short-Term Complications per 100,000 Beneficiary Months for Adults* (PQI01-AD), FFY 2020 (n = 36 states) [Lower rates are better for this measure]**

![Bar chart showing rate per 100,000 beneficiary months]

Adults age 18 and older had a median of 20 inpatient hospital admissions for diabetes short-term complications per 100,000 beneficiary months (36 states)

Source: Mathematica analysis of MACPro reports for the FFY 2020 reporting cycle as of June 18, 2021.

Note: This measure shows the number of inpatient hospital admissions for diabetes short-term complications (ketoacidosis, hyperosmolarity, or coma) per 100,000 beneficiary months for adults age 18 and older.

*Data displayed in this chart include adults ages 18 to 64 for 34 states and age 18 and older for 2 states.
PQI 01: Diabetes Short-Term Complications Admission Rate (continued)

Geographic Variation in the Number of Inpatient Hospital Admissions for Diabetes Short-Term Complications per 100,000 Beneficiary Months for Adults* (PQI01-AD), FFY 2020 (n = 36 states) [Lower rates are better for this measure]

Source: Mathematica analysis of MACPro reports for the FFY 2020 reporting cycle as of June 18, 2021.
*Data displayed in this chart include adults ages 18 to 64 for 34 states and age 18 and older for 2 states.
PQI 05: Chronic Obstructive Pulmonary Disease (COPD) or Asthma in Older Adults Admission Rate

Chronic obstructive pulmonary disease (COPD) is one of the most common chronic diseases in the United States and is currently the third leading cause of death in the U.S. population. Hospital admissions for COPD and asthma can often be avoided through high-quality outpatient care. This measure assesses the frequency of hospital admissions to treat COPD or asthma among Medicaid beneficiaries age 40 and older.

**Number of Inpatient Hospital Admissions for Chronic Obstructive Pulmonary Disease (COPD) or Asthma per 100,000 Beneficiary Months for Adults* Age 40 and Older (PQI05-AD), FFY 2020 (n = 31 states) [Lower rates are better for this measure]**

![Bar chart showing number of inpatient hospital admissions for COPD or asthma per 100,000 beneficiary months for adults age 40 and older.](chart.png)

Source: Mathematica analysis of MACPro reports for the FFY 2020 reporting cycle as of June 18, 2021.

Note: This measure shows the number of inpatient hospital admissions for chronic obstructive pulmonary disease (COPD) or asthma per 100,000 beneficiary months for adults age 40 and older.

*Data displayed in this chart include adults ages 40 to 64 for 30 states and age 40 and older for 1 state.
Number of Inpatient Hospital Admissions for Chronic Obstructive Pulmonary Disease (COPD) or Asthma per 100,000 Beneficiary Months for Adults* Age 40 and Older(PQI05-AD), FFY 2020 (n = 31 states) [Lower rates are better for this measure]

Source: Mathematica analysis of MACPro reports for the FFY 2020 reporting cycle as of June 18, 2021.
*Data displayed in this chart include adults ages 40 to 64 for 30 states and age 40 and older for 1 state.
An estimated 6.2 million people in the United States have congestive heart failure (CHF). The most common causes of CHF are coronary artery disease, high blood pressure, and diabetes, all of which can be treated, controlled, and monitored in outpatient settings. Inpatient hospital admissions for heart failure can be an indicator that these conditions are not being properly prevented or managed. This measure assesses the frequency of inpatient hospital admissions for heart failure among adult Medicaid beneficiaries.

**Number of Inpatient Hospital Admissions for Heart Failure per 100,000 Beneficiary Months for Adults* Age 18 and Older (PQI08-AD), FFY 2020 (n = 31 states) [Lower rates are better for this measure]**

![Bar chart showing rates per 100,000 beneficiary months for adults age 18 and older.

Source: Mathematica analysis of MACPro reports for the FFY 2020 reporting cycle as of June 18, 2021.

Note: This measure shows the number of inpatient hospital admissions for heart failure per 100,000 beneficiary months for adults age 18 and older.

*Data displayed in this chart include adults ages 18 to 64 for 30 states and age 18 and older for 1 state.
Geographic Variation in the Number of Inpatient Hospital Admissions for Heart Failure per 100,000 Beneficiary Months for Adults* Age 18 and Older (PQI08-AD), FFY 2020 (n = 31 states) [Lower rates are better for this measure]

Source: Mathematica analysis of MACPro reports for the FFY 2020 reporting cycle as of June 18, 2021.

*Data displayed in this chart include adults ages 18 to 64 for 30 states and age 18 and older for 1 state.
Asthma is one of the most common reasons for hospital admissions and emergency room visits among younger adults. These events are generally considered preventable with proper oversight and treatment in outpatient settings. This measure assesses the frequency of hospital admissions to treat asthma among Medicaid beneficiaries ages 18 to 39.

Adults ages 18 to 39 had a median of 7 inpatient hospital admissions for asthma per 100,000 beneficiary months (31 states).

Source: Mathematica analysis of MACPro reports for the FFY 2020 reporting cycle as of June 18, 2021.
Notes: This measure shows the number of inpatient hospital admissions for asthma per 100,000 beneficiary months for adults ages 18 to 39. Data were suppressed for North Dakota due to small cell sizes.
Context: This page continues the discussion on PQI 15: Asthma in Younger Adults Admission Rate.

Geographic Variation in the Number of Inpatient Hospital Admissions for Asthma per 100,000 Beneficiary Months for Adults Ages 18 to 39 (PQI15-AD), FFY 2020 (n = 31 states) [Lower rates are better for this measure]

The map shows the variation in asthma admission rates across different states. Each state is color-coded based on the number of admissions, with a legend indicating the ranges:
- Did Not Report
- 7.9 to 66.6
- 6.6 to 7.8
- 4.0 to 7.8
- 1.7 to 3.9
- State Median: 6.5 admissions per 100,000 beneficiary months
- Data Suppressed (see notes)

Source: Mathematica analysis of MACPro reports for the FFY 2020 reporting cycle as of June 18, 2021.

Note: Data were suppressed for North Dakota due to small cell sizes.
Plan All-Cause Readmissions

Unplanned readmissions to the hospital within 30 days of discharge are associated with adverse patient outcomes (including higher mortality) and higher health care costs. Readmissions may be prevented with coordination of care and support for patient self-management after discharge. This measure shows the ratio of observed readmissions to expected readmissions (O/E Ratio). The observed readmission rate is the number of acute inpatient stays during the measurement year for adults ages 18 to 64 that were followed by an unplanned acute readmission for any diagnosis within 30 days. This measure uses risk adjustment to calculate expected readmissions based on the characteristics of index hospital stays, including presence of surgeries, discharge condition, comorbidity, age, and gender.

**Ratio of Observed All-Cause Readmissions to Expected Readmissions (O/E Ratio) among Adults Ages 18 to 64 (PCR-AD), FFY 2020 (n = 37 states) [Lower rates are better for this measure]**

Of the 37 states reporting the measure, 17 states had fewer readmissions than expected given the case mix.

Source: Mathematica analysis of MACPro reports for the FFY 2020 reporting cycle as of June 18, 2021.

Notes: The Observed/Expected (O/E) Ratio is calculated as the ratio of the observed to expected readmissions and is rounded to four decimal places. The O/E Ratio is interpreted as “lower-is-better.” An O/E ratio < 1.0 means there were fewer readmissions than expected given the case mix. An O/E ratio = 1 means that the number of readmissions was the same as expected given the case mix. An O/E ratio > 1.0 means that there were more readmissions than expected given the case mix. Specifications for this measure changed substantially for FFY 2020 and rates are not comparable with rates for previous years. This chart excludes Maine, which calculated the measure but did not use Adult Core Set specifications.
Plan All-Cause Readmissions (continued)

Geographic Variation in the Ratio of Observed All-Cause Readmissions to Expected Readmissions among Adults Ages 18 to 64 (PCR-AD), FFY 2020 (n = 37 states) [Lower rates are better for this measure]

Source: Mathematica analysis of MACPro reports for the FFY 2020 reporting cycle as of June 18, 2021.
Note: This chart excludes Maine, which calculated the measure but did not use Adult Core Set specifications.
Asthma Medication Ratio: Ages 19 to 64

Asthma affects approximately 20 million adults in the United States. Uncontrolled asthma among adults can result in ED visits, hospitalizations, lost work days, and reduced productivity. The National Heart Lung and Blood Institute recommends long-term asthma control medications for adults with persistent asthma. This measure assesses the percentage of adults with persistent asthma who were dispensed appropriate asthma controller medications.

Percentage of Adults Ages 19 to 64 with Persistent Asthma who had a Ratio of Controller Medications to Total Asthma Medications of 0.50 or Greater (AMR-AD), FFY 2020 (n = 42 states)

Source: Mathematica analysis of MACPro reports for the FFY 2020 reporting cycle as of June 18, 2021.

Notes: This measure shows the percentage of adults ages 19 to 64 who were identified as having persistent asthma and who had a ratio of controller medications to total asthma medications of 0.50 or greater during the measurement year. Three rates are reported: (1) ages 19 to 50; (2) ages 51 to 64; and (3) a total rate for ages 19 to 64.

A median of 54 percent of adults ages 19 to 64 with persistent asthma had a ratio of controller medications to total asthma medications of 0.50 or greater (42 states)
Geographic Variation in the Percentage of Adults Ages 19 to 50 with Persistent Asthma who had a Ratio of Controller Medications to Total Asthma Medications of 0.50 or Greater (AMR-AD), FFY 2020 (n = 42 states)

Controlling High Blood Pressure

High blood pressure, or hypertension, increases the risk of heart disease and stroke, which are the leading causes of death in the United States. Controlling high blood pressure is an important step in preventing heart attacks, strokes, and kidney disease, and in reducing the risk of developing other serious conditions. This measure assesses the percentage of Medicaid beneficiaries who had a diagnosis of hypertension and whose blood pressure was adequately controlled.

**Percentage of Adults* who had a Diagnosis of Hypertension and whose Blood Pressure was Adequately Controlled (CBP-AD), FFY 2020 (n = 33 states)**

![Bar chart showing the percentage of adults with hypertension and adequately controlled blood pressure across three quartiles: Bottom Quartile (52.6%), Median (59.2%), and Top Quartile (64.7%)](chart.png)

Source: Mathematica analysis of MACPro reports for the FFY 2020 reporting cycle as of June 18, 2021.

Notes: This measure shows the percentage of adults ages 18 to 85 who had a diagnosis of hypertension and whose blood pressure was adequately controlled (<140/90 mm Hg) during the measurement year. This chart excludes Arkansas, which calculated the measure but did not use Adult Core Set specifications.

*Data displayed in this chart include adults ages 18 to 64 for 16 states and ages 18 to 85 for 17 states.*

*Data displayed in this chart include adults ages 18 to 64 for 16 states and ages 18 to 85 for 17 states.
Behavioral Health Care

As the single largest payer for mental health services in the United States, Medicaid plays an important role in providing behavioral health care and monitoring the effectiveness of that care.¹ For the purpose of the Adult Core Set, the term “behavioral health care” refers to treatment of mental health conditions and substance use disorders. Improvement of benefit design and service delivery for behavioral health care in Medicaid is a high priority for CMS, in collaboration with other federal agencies, states, providers, and consumers.

Ten Adult Core Set measures of behavioral health care were available for analysis for FFY 2020.

- Use of Opioids at High Dosage in Persons Without Cancer
- Concurrent Use of Opioids and Benzodiazepines
- Initiation and Engagement of Alcohol and Other Drug Abuse or Dependence Treatment
- Medical Assistance With Smoking and Tobacco Use Cessation
- Follow-Up After Emergency Department Visit for Alcohol and Other Drug Abuse or Dependence
- Follow-Up After Emergency Department Visit for Mental Illness
- Follow-Up After Hospitalization for Mental Illness: Age 18 and Older
- Antidepressant Medication Management
- Adherence to Antipsychotic Medications for Individuals with Schizophrenia
- Diabetes Screening for People with Schizophrenia or Bipolar Disorder Who Are Using Antipsychotic Medications

¹ For more information about Medicaid coverage of behavioral health care, see: https://www.medicaid.gov/medicaid/benefits/bhs/index.html.
Use of Opioids at High Dosage in Persons Without Cancer

Inappropriate prescribing and overuse of opioids is linked to an increased risk of morbidity and mortality. The Centers for Disease Control and Prevention recommends that clinicians prescribe opioids at the lowest effective dosage, consider individual benefits and risks when increasing dosage, and avoid increasing dosage to greater than or equal to 90 morphine milligram equivalents per day.

Percentage of Adults* Without Cancer who Received Prescriptions for Opioids with an Average Daily Dosage Greater than or Equal to 90 Morphine Milligram Equivalents for a Period of 90 Days or More (OHD-AD), FFY 2020 (n = 28 states) [Lower rates are better for this measure]

A median of 7 percent of adults received prescriptions for opioids with an average daily dosage greater than or equal to 90 Morphine Milligram Equivalents over a period of 90 consecutive days or more (28 states)

Source: Mathematica analysis of MACPro reports for the FFY 2020 reporting cycle as of June 18, 2021.

Notes: This measure shows the percentage of adults age 18 and older who received prescriptions for opioids with an average daily dosage greater than or equal to 90 morphine milligram equivalents over a period of 90 days or more during the measurement year. Beneficiaries with a cancer diagnosis, sickle cell disease diagnosis, or in hospice are excluded. This chart excludes New Jersey, New York, Ohio, Pennsylvania, and Texas, which calculated the measure but did not use Adult Core Set specifications.

*Data displayed in this chart include adults ages 18 to 64 for 26 states and age 18 and older for 2 states.
Geographic Variation in the Percentage of Adults* Without Cancer who Received Prescriptions for Opioids with an Average Daily Dosage Greater than or Equal to 90 Morphine Milligram Equivalents for a Period of 90 Days or More (OHD-AD), FFY 2020 (n = 28 states) [Lower rates are better for this measure]

Source: Mathematica analysis of MACPro reports for the FFY 2020 reporting cycle as of June 18, 2021.

Note: This chart excludes New Jersey, New York, Ohio, Pennsylvania, and Texas, which calculated the measure but did not use Adult Core Set specifications.

*Data displayed in this chart include adults ages 18 to 64 for 26 states and age 18 and older for 2 states.
Concurrent Use of Opioids and Benzodiazepines

The concurrent use of opioids and benzodiazepines can increase the risk for overdose and death and result in other adverse events, such as difficulty breathing. The Centers for Disease Control and Prevention (CDC) recommends that prescribers should avoid concurrent prescriptions of opioids and benzodiazepines. This measure assesses the percentage of adults age 18 and older that were prescribed both opioids and benzodiazepines for 30 or more cumulative days during the measurement year. Performance on this measure is being publicly reported for the first time for FFY 2020.

**Percentage of Adults* with Concurrent Use of Prescription Opioids and Benzodiazepines for 30 or More Cumulative Days (COB-AD), FFY 2020 (n = 27 states) [Lower rates are better for this measure]**

A median of 16 percent of adults with 2 or more prescriptions for opioids, had concurrent prescriptions for opioids and benzodiazepines for 30 or more cumulative days (27 states)

Source: Mathematica analysis of MACPro reports for the FFY 2020 reporting cycle as of June 18, 2021.

Notes: This measure shows the percentage of adults age 18 and older with concurrent use of prescription opioids and benzodiazepines for 30 or more cumulative days during the measurement year. Adults with a cancer diagnosis, sickle cell disease diagnosis, or in hospice are excluded. Data were suppressed for West Virginia due to small cell sizes.

*Data displayed in this chart include adults ages 18 to 64 for 26 states and age 18 and older for 1 state.
Concurrent Use of Opioids and Benzodiazepines (continued)

Geographic Variation in the Percentage of Adults* with Concurrent Use of Prescription Opioids and Benzodiazepines for 30 or More Cumulative Days (COB-AD), FFY 2020 (n = 27 states) [Lower rates are better for this measure]

Source: Mathematica analysis of MACPro reports for the FFY 2020 reporting cycle as of June 18, 2021.
Note: Data were suppressed for West Virginia due to small cell sizes.
*Data displayed in this chart include adults ages 18 to 64 for 26 states and age 18 and older for 1 state.
Initiation and Engagement of Alcohol and Other Drug Abuse or Dependence Treatment

Treatment for alcohol or other drug (AOD) abuse or dependence can improve health, productivity, and social outcomes, and can save millions of dollars on health care and related costs. This measure shows how often beneficiaries with newly-diagnosed AOD dependence initiated timely treatment (within 14 days of diagnosis), and then continued that treatment (two or more additional services or medication treatment within 34 days of the initiation visit).

**Percentage of Adults* Age 18 and Older with a New Episode of Alcohol or Other Drug Abuse or Dependence who: (1) Initiated Treatment within 14 Days of the Diagnosis, and (2) Initiated Treatment and were Engaged in Ongoing Treatment within 34 Days of the Initiation Visit (IET-AD), FFY 2020**

A median of **43** percent of adults with alcohol or other drug abuse or dependence initiated treatment within 14 days of diagnosis (40 states). 16 percent were engaged in ongoing treatment within 34 days of the initiation visit (40 states).

Source: Mathematica analysis of MACPro reports for the FFY 2020 reporting cycle as of June 18, 2021.

Note: This measure shows the percentage of adults age 18 and older who: (1) initiated treatment through an inpatient AOD admission, outpatient visit, intensive outpatient encounter, partial hospitalization, telehealth, or medication treatment within 14 days of the diagnosis (initiation rate); and (2) initiated treatment and who were engaged in ongoing AOD treatment within 34 days of the initiation visit (engagement rate).

*Data displayed in this chart include adults ages 18 to 64 for 30 states and age 18 and older for 10 states.*

Medical Assistance With Smoking and Tobacco Use Cessation

Smoking and tobacco use are the leading cause of preventable disease and death in the United States. The CDC estimates that cigarette smoking causes nearly half a million deaths in the U.S. each year. Medical assistance with smoking and tobacco use cessation may reduce the prevalence of smoking and tobacco use, and ultimately prevent disease and improve health and quality of life. This measure assesses receipt of medical assistance with smoking and tobacco use cessation among adults age 18 and older who are current smokers or tobacco users. Performance on this measure is being publicly reported for the first time for FFY 2020.

**Percentage of Adults Age 18 and Older who were Current Smokers or Tobacco Users and who (1) Were Advised to Quit, (2) Discussed or were Recommended Cessation Medications, (3) Discussed or were Provided Other Cessation Methods or Strategies (MSC-AD), FFY 2020 (n = 28 states)**

A median of **77** percent of adults who were current smokers or tobacco users received advice to quit,

**54** percent discussed cessation medications, and

**48** percent discussed other cessation strategies (28 states)

Source: Mathematica analysis of MACPro reports for the FFY 2020 reporting cycle as of June 18, 2021.

Notes: This measure shows the percentage of adults age 18 and older who reported that they were current smokers or tobacco users and who were provided medical assistance with smoking and tobacco use cessation in the six months prior to the survey. Rates are the percentage of beneficiaries who responded ‘Sometimes,’ ‘Usually,’ or ‘Always’ among beneficiaries who reported smoking ‘Every Day’ or ‘Some Days.’ Rates represent a rolling two-year average for the measurement year and prior year. Rates are not reported if fewer than 100 beneficiaries responded to the survey question. Data were suppressed for Oklahoma due to small cell sizes.

*Data displayed in this chart include adults ages 18 to 64 for 17 states and age 18 and older for 11 states.

*Data displayed in this chart include adults ages 18 to 64 for 39 states, age 18 and older for 1 state.
Follow-Up After Hospitalization for Mental Illness: Age 18 and Older

Follow-up care after hospitalization for mental illness or intentional self-harm helps improve health outcomes and prevent readmissions in the days following discharge from inpatient mental health treatment. Recommended post-discharge treatment includes a visit with an outpatient mental health practitioner within 30 days after discharge and ideally, within 7 days after discharge.

Percentage of Discharges for Adults Age 18 and Older Hospitalized for Treatment of Mental Illness or Intentional Self-Harm with a Follow-Up Visit with a Mental Health Practitioner within 7 and 30 Days After Discharge (FUH-AD), FFY 2020 (n = 48 states)

A median of 33 percent of adults who were hospitalized for mental illness or intentional self-harm had a follow-up visit within 7 days after discharge and 55 percent had a follow-up visit within 30 days after discharge (48 states).

Source: Mathematica analysis of MACPro reports for the FFY 2020 reporting cycle as of June 18, 2021.

Notes: This measure shows the percentage of discharges for adults age 18 and older who were hospitalized for treatment of selected mental illness or intentional self-harm diagnoses who had a follow-up visit with a mental health practitioner. Two rates are reported: (1) the percentage of discharges for which the beneficiary received follow-up within 7 days after discharge; and (2) the percentage of discharges for which the beneficiary received follow-up within 30 days after discharge. This chart excludes Oregon, which reported the measure but did not use Core Set specifications.
Follow-Up After Hospitalization for Mental Illness Within 7 Days After Discharge (continued)

Note: This chart excludes Oregon, which reported the measure but did not use Core Set specifications.
Antidepressant Medication Management

Effective management of antidepressant medication is an important standard of care for patients receiving treatment for depression. When individuals are first diagnosed with major depression, medication may be prescribed either alone or in combination with psychotherapy. An initial course of medication treatment is recommended for 12 weeks to choose an effective regimen and observe a clinical response (acute phase). Continued treatment for at least six months is recommended to prevent relapse and to maintain functioning (continuation phase).

Percentage of Adults* with a Diagnosis of Major Depression who were Treated with and Remained on an Antidepressant Medication (AMM-AD), FFY 2020

Source: Mathematica analysis of MACPro reports for the FFY 2020 reporting cycle as of June 18, 2021.

Note: This measure shows the percentage of adults age 18 and older diagnosed with major depression who were treated with antidepressant medication and who remained on antidepressant medication treatment. Two rates are reported: (1) the percentage who remained on antidepressant medication treatment for the 12-week acute phase; and (2) the percentage who remained on antidepressant medication treatment for the 6-month continuation phase.

*A data displayed in this chart include adults ages 18 to 64 for 27 states and age 18 and older for 16 states.

Note: This chart excludes Idaho, which reported the measure but did not provide data for the Continuation Phase Treatment rate.
*Data displayed in this chart include adults ages 18 to 64 for 26 states and age 18 and older for 16 states.
Adherence to Antipsychotic Medications for Individuals with Schizophrenia

Adherence to antipsychotics for the treatment of schizophrenia can reduce the risk of relapse or hospitalization. This measure shows the percentage of Medicaid beneficiaries with schizophrenia or schizoaffective disorder who remained on an antipsychotic medication for at least 80 percent of their treatment period.

**Percentage of Adults Age 18 and Older with Schizophrenia or Schizoaffective Disorder who were Dispensed and Remained on an Antipsychotic Medication for at Least 80 Percent of their Treatment Period (SAA-AD), FFY 2020 (n = 43 states)**

![Bar chart showing percentage adherence]

A median of 63 percent of adults ages 19 to 64 with schizophrenia or schizoaffective disorder remained on an antipsychotic medication for at least 80 percent of their treatment period (43 states).
Geographic Variation in the Percentage of Adults Age 18 and Older with Schizophrenia or Schizoaffective Disorder who were Dispensed and Remained on an Antipsychotic Medication for at Least 80 Percent of their Treatment Period (SAA-AD), FFY 2020 (n = 43 states)

State Median: 62.5%

Source: Mathematica analysis of MACPro reports for the FFY 2020 reporting cycle as of June 18, 2021.
Diabetes Screening for People with Schizophrenia or Bipolar Disorder Who Are Using Antipsychotic Medications

Individuals with serious mental illness who use antipsychotics are at increased risk of developing diabetes. Lack of appropriate screening for diabetes among people with schizophrenia, schizoaffective disorder, or bipolar disorder who use antipsychotic medications can lead to adverse health outcomes if diabetes is not detected and treated. This measure assesses whether Medicaid beneficiaries with schizophrenia, schizoaffective disorder, or bipolar disorder who were dispensed an antipsychotic medication had a diabetes screening test.

Percentage of Adults Ages 18 to 64 with Schizophrenia, Schizoaffective Disorder, or Bipolar Disorder who were Dispensed an Antipsychotic Medication and had a Diabetes Screening Test (SSD-AD), FFY 2020 (n = 44 states)

A median of **80** percent of adults with schizophrenia, schizoaffective disorder, or bipolar disorder who were dispensed an antipsychotic had a diabetes screening test during the measurement year (44 states)

Long-Term Services & Supports

Medicaid is the primary payer for long-term care services in the United States. Medicaid covers long-term care services across a continuum of settings, including home- and community-based long-term services and supports (LTSS) and institutional facilities. More than 20 percent of total Medicaid spending is for long-term care spending.

CMS is working in partnership with states, providers, consumers, advocates, and other stakeholders to create a person-driven system in which Medicaid beneficiaries with disabilities and chronic conditions have choice, control, and access to a full array of services that promote their health, independence, and quality of life.

One Adult Core Set measure of long-term services and supports was available for analysis for FFY 2020.

- National Core Indicators Survey

---

The National Core Indicators (NCI) provide information on beneficiaries’ experience and self-reported outcomes of long-term services and supports for individuals with intellectual and developmental disabilities (I/DD) and their families. State-level performance on three measures of I/DD beneficiary experience are reported for FFY 2020. These measures are: (1) Life Decisions Scale; (2) Everyday Choices Scale; and (3) Always Has a Way to Get Places. Performance on these measures are being publicly reported for the first time for FFY 2020.

### National Core Indicators Survey: Experiences and Self-Reported Outcomes of Long-Term Services and Supports of Adults Age 18 and Older with Intellectual and Developmental Disabilities (NCIDDS-AD), FFY 2020 (n = 25 states)

A median of 69 percent of adults reported they chose or had some input in life decisions, 93 percent reported they chose or had some input in choosing their daily activities, spending, and free time, and 95 percent reported they always had a means of transportation (25 states).

Source: Mathematica analysis of National Core Indicators (NCI) data submitted by states to the National Association of State Directors of Developmental Disabilities Services and the Human Services Research Institute (The NCI National Team) through the Online Data Entry System (ODESA) for the July 1, 2019 to June 30, 2020 data collection period.

Notes: Three measures of beneficiary experience from the NCI In-Person Survey (IPS) are reported for the Adult Core Set for FFY 2020: (1) Life Decisions Scale (percentage of adults who reported they chose or had some input in choosing their residence, work, day activity, staff, and roommates); (2) Everyday Choices Scale (percentage of adults who reported they decided or had help deciding their daily schedule, how to spend money, and how to spend free time); and (3) Always Has a Way to Get Places measure (percentage of adults who reported they always have a way to get places when they need to go somewhere).
Percentage of Adults who Make Choices about Their Life Decisions, including Their Residence, Work, Day Activity, Staff, and Roommates (NCIDDS-AD), FFY 2020 (n = 25 states)

Source: Mathematica analysis of National Core Indicators (NCI) data submitted by states to the National Association of State Directors of Developmental Disabilities Services and the Human Services Research Institute (The NCI National Team) through the Online Data Entry System (ODESA) for the July 1, 2019 to June 30, 2020 data collection period.
Percentage of Adults who Reported They Decided or Had Help Deciding Their Daily Schedule, How to Spend Money, and How to Spend Free Time (NCIDDS-AD), FFY 2020 (n = 25 states)

Did Not Report
- 84.1% to 89.5%
- 89.6% to 92.8%
- 92.9% to 93.8%
- 93.9% to 98.2%

State Median: 92.9%

Source: Mathematica analysis of National Core Indicators (NCI) data submitted by states to the National Association of State Directors of Developmental Disabilities Services and the Human Services Research Institute (The NCI National Team) through the Online Data Entry System (ODESA) for the July 1, 2019 to June 30, 2020 data collection period.
Percentage of Adults who Reported They Always Have a Way to Get Places When They Need to go Somewhere (NCIDDS-AD), FFY 2020 (n = 25 states)

Source: Mathematica analysis of National Core Indicators (NCI) data submitted by states to the National Association of State Directors of Developmental Disabilities Services and the Human Services Research Institute (The NCI National Team) through the Online Data Entry System (ODESA) for the July 1, 2019 to June 30, 2020 data collection period.
TRENDS IN STATE PERFORMANCE, FFY 2018–FFY 2020

CMS assessed trends in median state performance on 14 Adult Core Set measures publicly reported from FFY 2018 to FFY 2020.¹ To be trended, each measure must meet the following three criteria:

- The measure was publicly reported for each of the most recent three years. To be publicly reported, a measure must be reported by at least 25 states using Core Set specifications and must meet CMS standards for data quality.
- The measure was reported by a set of at least 20 states that used Core Set specifications in all three years.
- The measure specifications were comparable for all three years (no specification changes occurred during the three-year period that would make results incomparable across years).

Many factors may affect changes in the performance rates reported by states on the Adult Core Set measures. While shifts in access and quality may account for some of the changes in performance over time, other factors noted by states include changes in:

- The method and data used to calculate the measures
- The populations included in the measures (such as managed care versus fee-for-service)
- Other aspects of their Medicaid program that could affect reporting (such as transitions in data systems or delivery systems).

Median state performance on the Breast Cancer Screening, Cervical Cancer Screening and Chlamydia Screening in Women Ages 21 to 24 measures did not change significantly from FFY 2018 to FFY 2020, among the states reporting the measures for all three years.

Notes: This chart includes the states that reported each measure using Adult Core Set specifications for all three years. Data from previous years may be updated based on new information received after publication of the 2020 Chart Pack.
Median state performance on three rates in the Contraceptive Care: Postpartum Women Ages 21 to 44 measure increased significantly from FFY 2018 to FFY 2020 among the states reporting the measure for all three years, including the Most or Moderately Effective (MME) Method of Contraception 3-days Postpartum, MME Method of Contraception 60-days Postpartum, and Long-Acting Reversible Method of Contraception (LARC) 3-days Postpartum rates. Median state performance on the LARC 60-days Postpartum rate decreased significantly from FFY 2018 to FFY 2020 among the states reporting the measure for all three years.

Notes: This chart includes the states that reported the measure using Adult Core Set specifications for all three years. Data from previous years may be updated based on new information received after publication of the 2020 Chart Pack.
Trends in State Performance, FFY 2018–FFY 2020: Care of Acute and Chronic Conditions

Median state performance on the Comprehensive Diabetes Care: Hemoglobin A1c Poor Control and Asthma Medication Ratio: Ages 19 to 64 measures did not change significantly from FFY 2018 to FFY 2020 among the states reporting the measures for all three years.

Notes: This chart includes the states that reported each measure using Adult Core Set specifications for all three years. Data from previous years may be updated based on new information received after publication of the 2020 Chart Pack. *Lower rates are better for this measure.
The median rate on the PQI 05: COPD or Asthma in Older Adults Admission Rate measure decreased significantly from FFY 2018 to FFY 2020 among the states reporting the measure for all three years, representing higher performance because lower rates are better on this measure. The median rate on the PQI 01: Diabetes Short-Term Complications Admission Rate and PQI 08: Heart Failure Admission Rate measures increased significantly from FFY 2018 to FFY 2020 among the states reporting the measures for all three years, representing lower performance because lower rates are better on these measures. The median rate on the PQI 15: Asthma in Younger Adults Admission Rate measure did not change significantly during this period.

Notes: This chart includes the states that reported each measure using Adult Core Set specifications for all three years. Data from previous years may be updated based on new information received after publication of the 2020 Chart Pack. *Lower rates are better for this measure.

Median state performance on the Initiation and Engagement of Alcohol and Other Drug Abuse or Dependence Treatment measure increased significantly from FFY 2018 to FFY 2020 among the states reporting the measure for all three years for five indicators, including the four Initiation of Treatment rates and the Engagement rate for Opioid Abuse or Dependence. Median state performance did not change significantly for three rates of Engagement in Treatment, including treatment for Alcohol Abuse or Dependence, Other Drug Abuse or Dependence, or Total Alcohol or Other Drug Abuse or Dependence.

Notes: This chart includes the states that reported the measure using Adult Core Set specifications for all three years. Data from previous years may be updated based on new information received after publication of the 2020 Chart Pack.
Trends in State Performance, FFY 2018–FFY 2020: Behavioral Health Care (continued)

Median state performance on the Antidepressant Medication Management, Adherence to Antipsychotics for Individuals with Schizophrenia, and Diabetes Screening for People With Schizophrenia or Bipolar Disorder Using Antipsychotic Medications measures increased significantly from FFY 2018 to FFY 2020.

Notes: This chart includes the states that reported each measure using Adult Core Set specifications for all three years. Data from previous years may be updated based on new information received after publication of the 2020 Chart Pack.

Sources: Mathematica analysis of MACPro reports for the FFY 2020 reporting cycle as of June 18, 2021 and National Core Indicators (NCI) data submitted by states to the NCI National Team for the July 1, 2019 to June 30, 2020 data collection period.

Notes: The term “states” includes the 50 states, the District of Columbia, and Puerto Rico. The 2020 Adult Core Set includes 33 measures. Two measures were retired from the 2020 Adult Core Set and two measures were added. Information about the updates to the 2020 Core Sets is available at https://www.medicaid.gov/federal-policy-guidance/downloads/cib.111919.pdf. This table includes all Adult Core Set measures for the FFY 2020 reporting cycle, including measures that were reported by states using “other” specifications and measures for which the rates are not publicly reported due to CMS data suppression rules. X = measure w as reported by the state; -- = measure w as not reported by the state. The following states did not report Adult Core Set measures for FFY 2020: Alaska and Montana.

Sources: Mathematica analysis of MACPro reports for the FFY 2020 reporting cycle as of June 18, 2021 and National Core Indicators (NCI) data submitted by states to the NCI National Team for the July 1, 2019 to June 30, 2020 data collection period.

Notes: The term “states” includes the 50 states, the District of Columbia, and Puerto Rico. This table includes measures that were reported by at least 25 states for FFY 2020 and that met CMS standards for data quality. This table includes data for states that indicated they used Adult Core Set specifications to report the measures and excludes states that indicated they used other specifications and states that did not report the measures for FFY 2020. Additionally, some states were excluded because data cannot be displayed per the CMS cell-size suppression policy, which prohibits the direct reporting of data for beneficiary and record counts of 1 to 10 and values from which users can derive values of 1 to 10. Means are calculated as the unweighted average of all state rates. Measure-specific tables are available at https://www.medicaid.gov/medicaid/quality-of-care/performance-measurement/adult-and-child-health-care-quality-measures/adult-health-care-quality-measures/index.html. The CAHPS Health Plan Survey measure is excluded from this table because it uses a summary statistic different from those in this table.
### Trends in Performance Rates on Frequently Reported Adult Core Set Measures, FFY 2018–FFY 2020

Notes: The term “states” includes the 50 states, the District of Columbia, and Puerto Rico.

This table includes measures that each met the following criteria: (1) the measure was publicly reported for each of the most recent three years. To be publicly reported, a measure must be reported by at least 25 states using Core Set specifications and must meet CMS standards for data quality; (2) the measure was reported by a set of at least 20 states that used Core Set specifications in all three years; (3) the measure specifications were comparable for all three years. Data from previous years may be updated based on new information received after publication of the 2020 Chart Pack.
