

August and September 2021 Medicaid and CHIP Enrollment Trends Snapshot

*Center for Medicaid
and CHIP Services*

Enrollment Snapshot

- To be responsive to questions on Medicaid and CHIP enrollment, particularly given the impact of the COVID-19 public health emergency (PHE), this Enrollment Snapshot captures high level information on the most recently submitted month of Performance Indicator Data within the context of trends since February 2020,¹ focusing on:
 - Total Medicaid and CHIP enrollment
 - Medicaid enrollment
 - CHIP enrollment
 - Adult enrollment
 - Child enrollment
- This analysis also captures high level information on the trend in the number of Medicaid and CHIP applications received by states.

¹ February 2020 serves as a baseline prior to the impacts of the COVID-19 pandemic and the enactment of the Families First Coronavirus Response Act (FFCRA) in March 2020. Section 6008 of FFCRA includes a continuous enrollment requirement, which makes available a temporary 6.2 percentage point increase to each state or territory's federal medical assistance percentage (FMAP) during the national PHE. As a condition of receiving the FMAP increase, states must meet several requirements pertaining to eligibility and maintenance of enrollment.

Key Findings

- In September 2021, 84,828,543 individuals were enrolled in Medicaid and CHIP.
 - 77,879,760 individuals were enrolled in Medicaid in September 2021. Medicaid enrollment increased by 640,953 in August 2021 compared to July 2021, and then increased again by 533,627 in September 2021.
 - 6,948,783 individuals were enrolled in CHIP in September 2021. CHIP enrollment increased by 19,996 in August 2021 compared to July 2021, and then increased again by 19,190 in September 2021.
- Since February 2020, enrollment in Medicaid and CHIP has increased by 14,140,683 individuals (20.0%).
 - Medicaid enrollment increased by 13,852,023 individuals (21.6%).
 - CHIP enrollment increased by 288,660 individuals (4.3%).
- The Medicaid enrollment increases are likely driven by COVID-19 and the continuous enrollment requirement in the Families First Coronavirus Response Act (FFCRA).¹

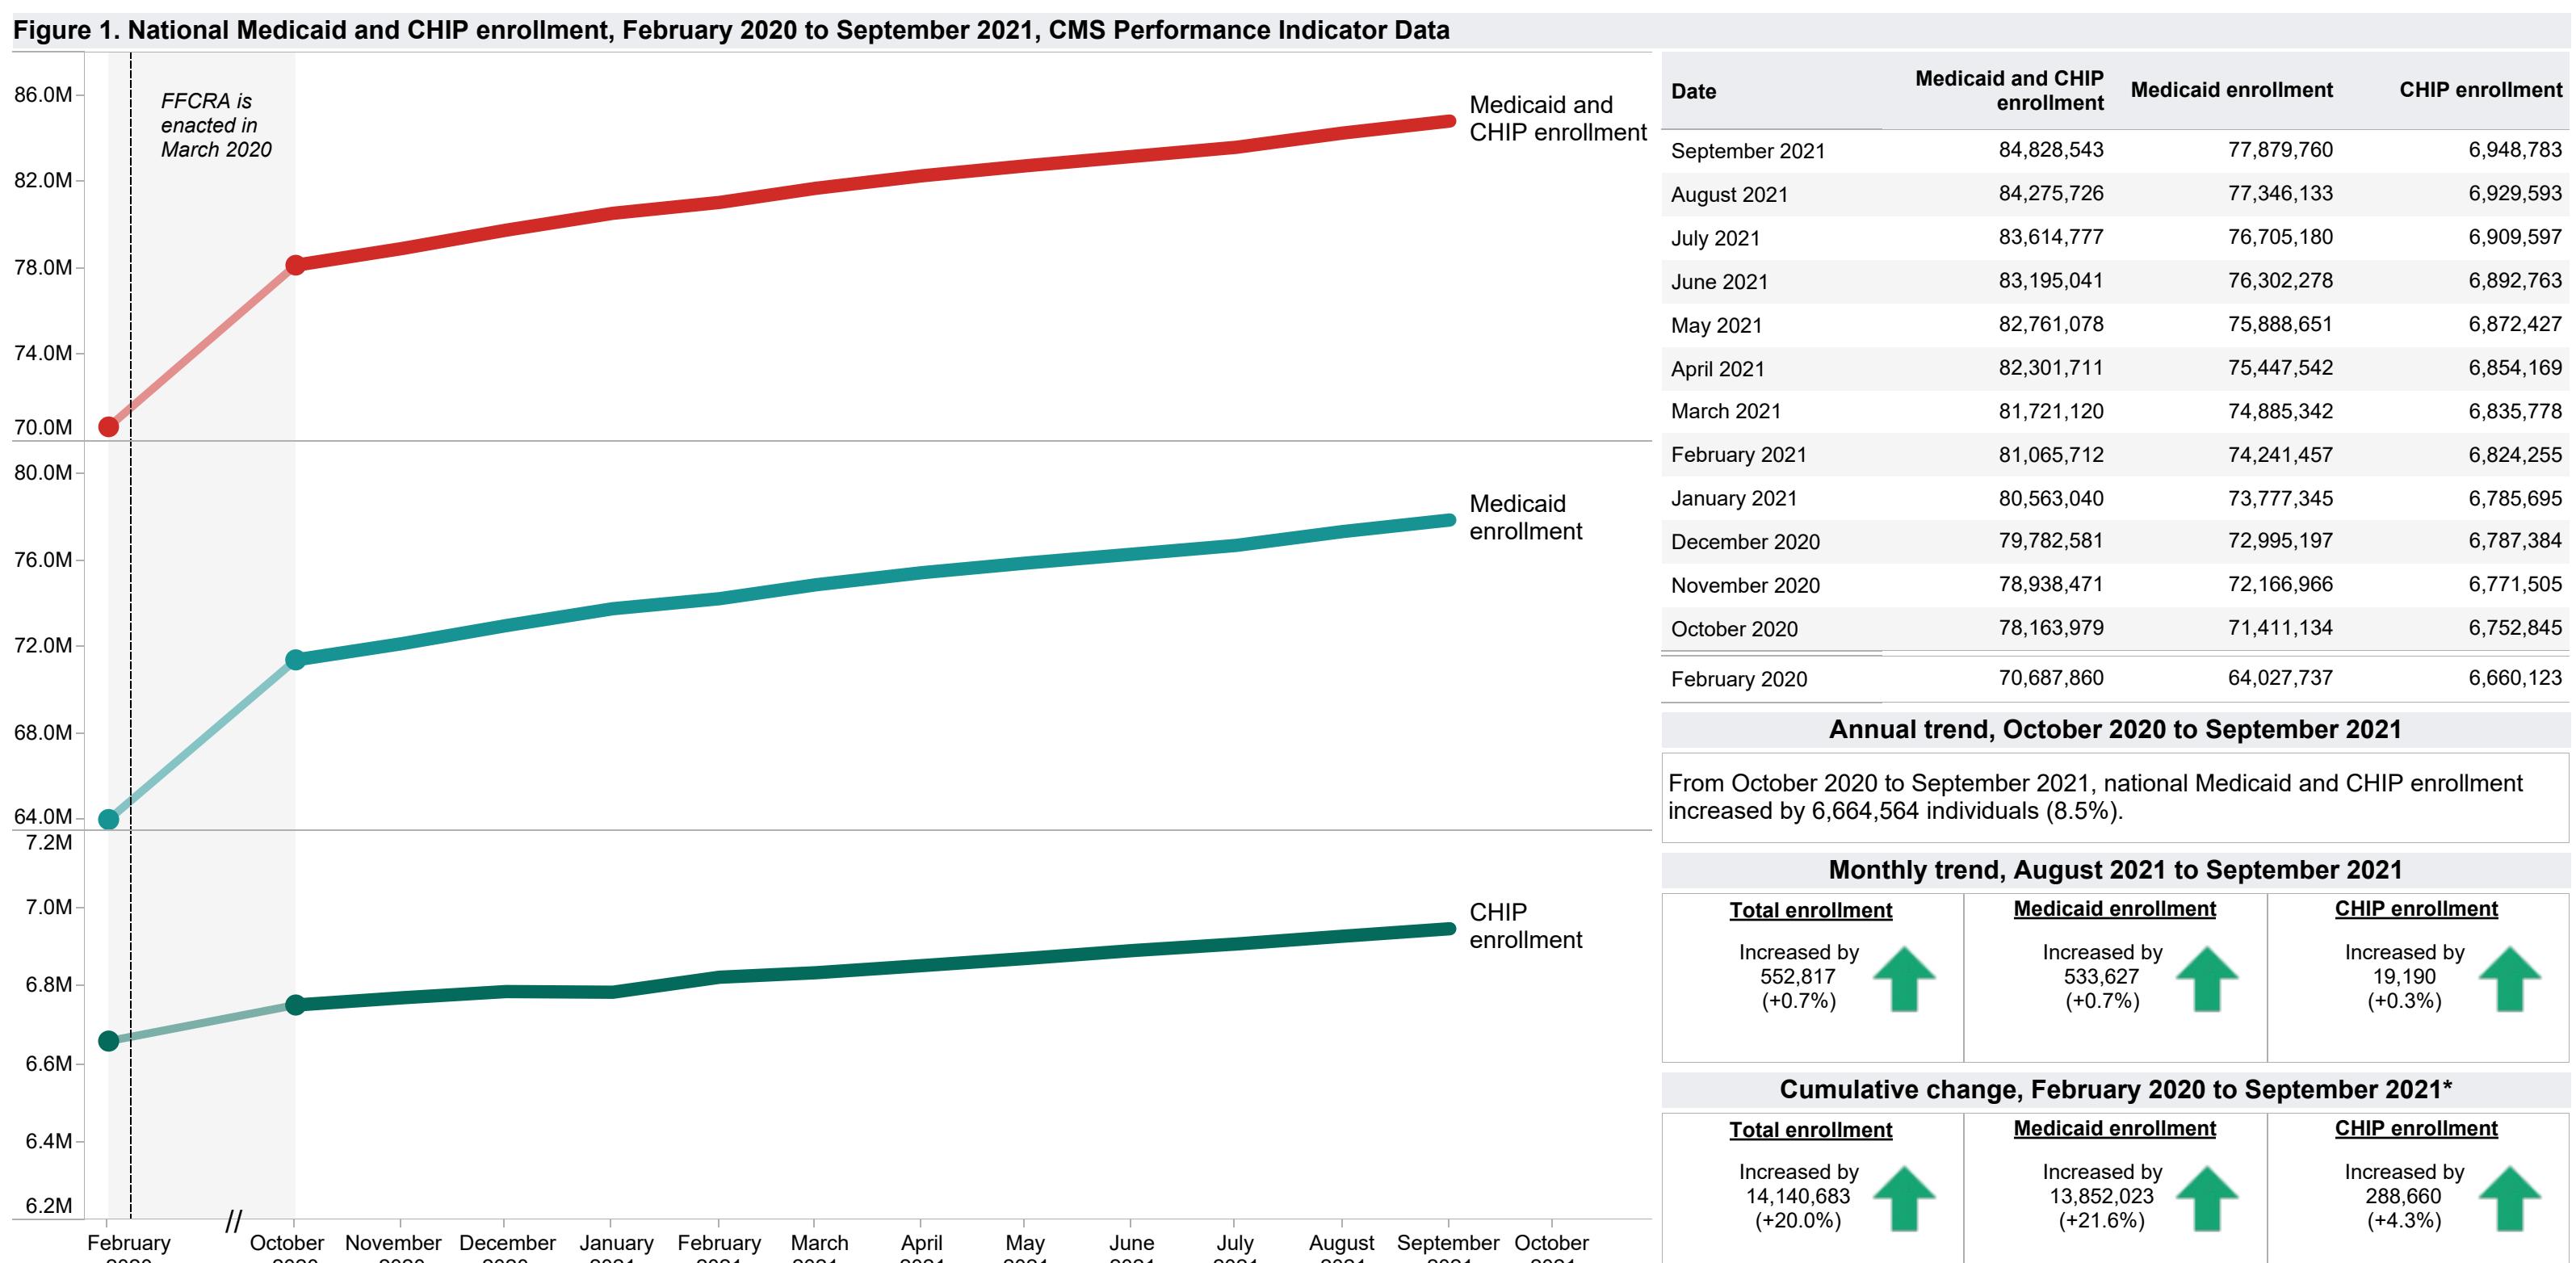

¹ Families First Coronavirus Response Act, Pub. L. No. 116-127, Sec 6008, Temporary Increase of Medicaid FMAP. <https://www.congress.gov/116/plaws/publ127/PLAW-116publ127.pdf>

Key Findings (continued)

- In August 2021 and September 2021, about 2.3 to 2.5 million applications for Medicaid and CHIP were submitted directly to states.¹
 - The number of applications submitted directly to states increased by 16 percent in August 2021 compared to July 2021, and then increased again by 6 percent in September 2021.
- Following the end of the 2021 Special Enrollment Period on August 15, 2021, the number of applications transferred from the Federally Facilitated Marketplace (FFM) to states fell to 95,000 in September 2021.^{1,2}
 - After the start of the 2021 Special Enrollment Period in February 2021, the number of transferred applications rose from 137,000 in February 2021 to 291,000 in April 2021. There were about 149,000 to 203,000 transferred applications each month from May 2021 to August 2021. In September 2021, 95,000 applications were transferred from the FFM to states.

¹ These counts include applications received by 48 states and the District of Columbia. Kansas and Maine are excluded because these states did not have complete data on the number of applications submitted directly to the states from February 2020 to September 2021.

² On January 28, 2021, [CMS announced](#) that it would provide a Special Enrollment Period for individuals to apply for and enroll in coverage via the HealthCare.gov Marketplace platform from February 15, 2021 through May 15, 2021. On March 23, 2021, [President Biden announced](#) that CMS would extend access to the Special Enrollment Period through August 15, 2021.

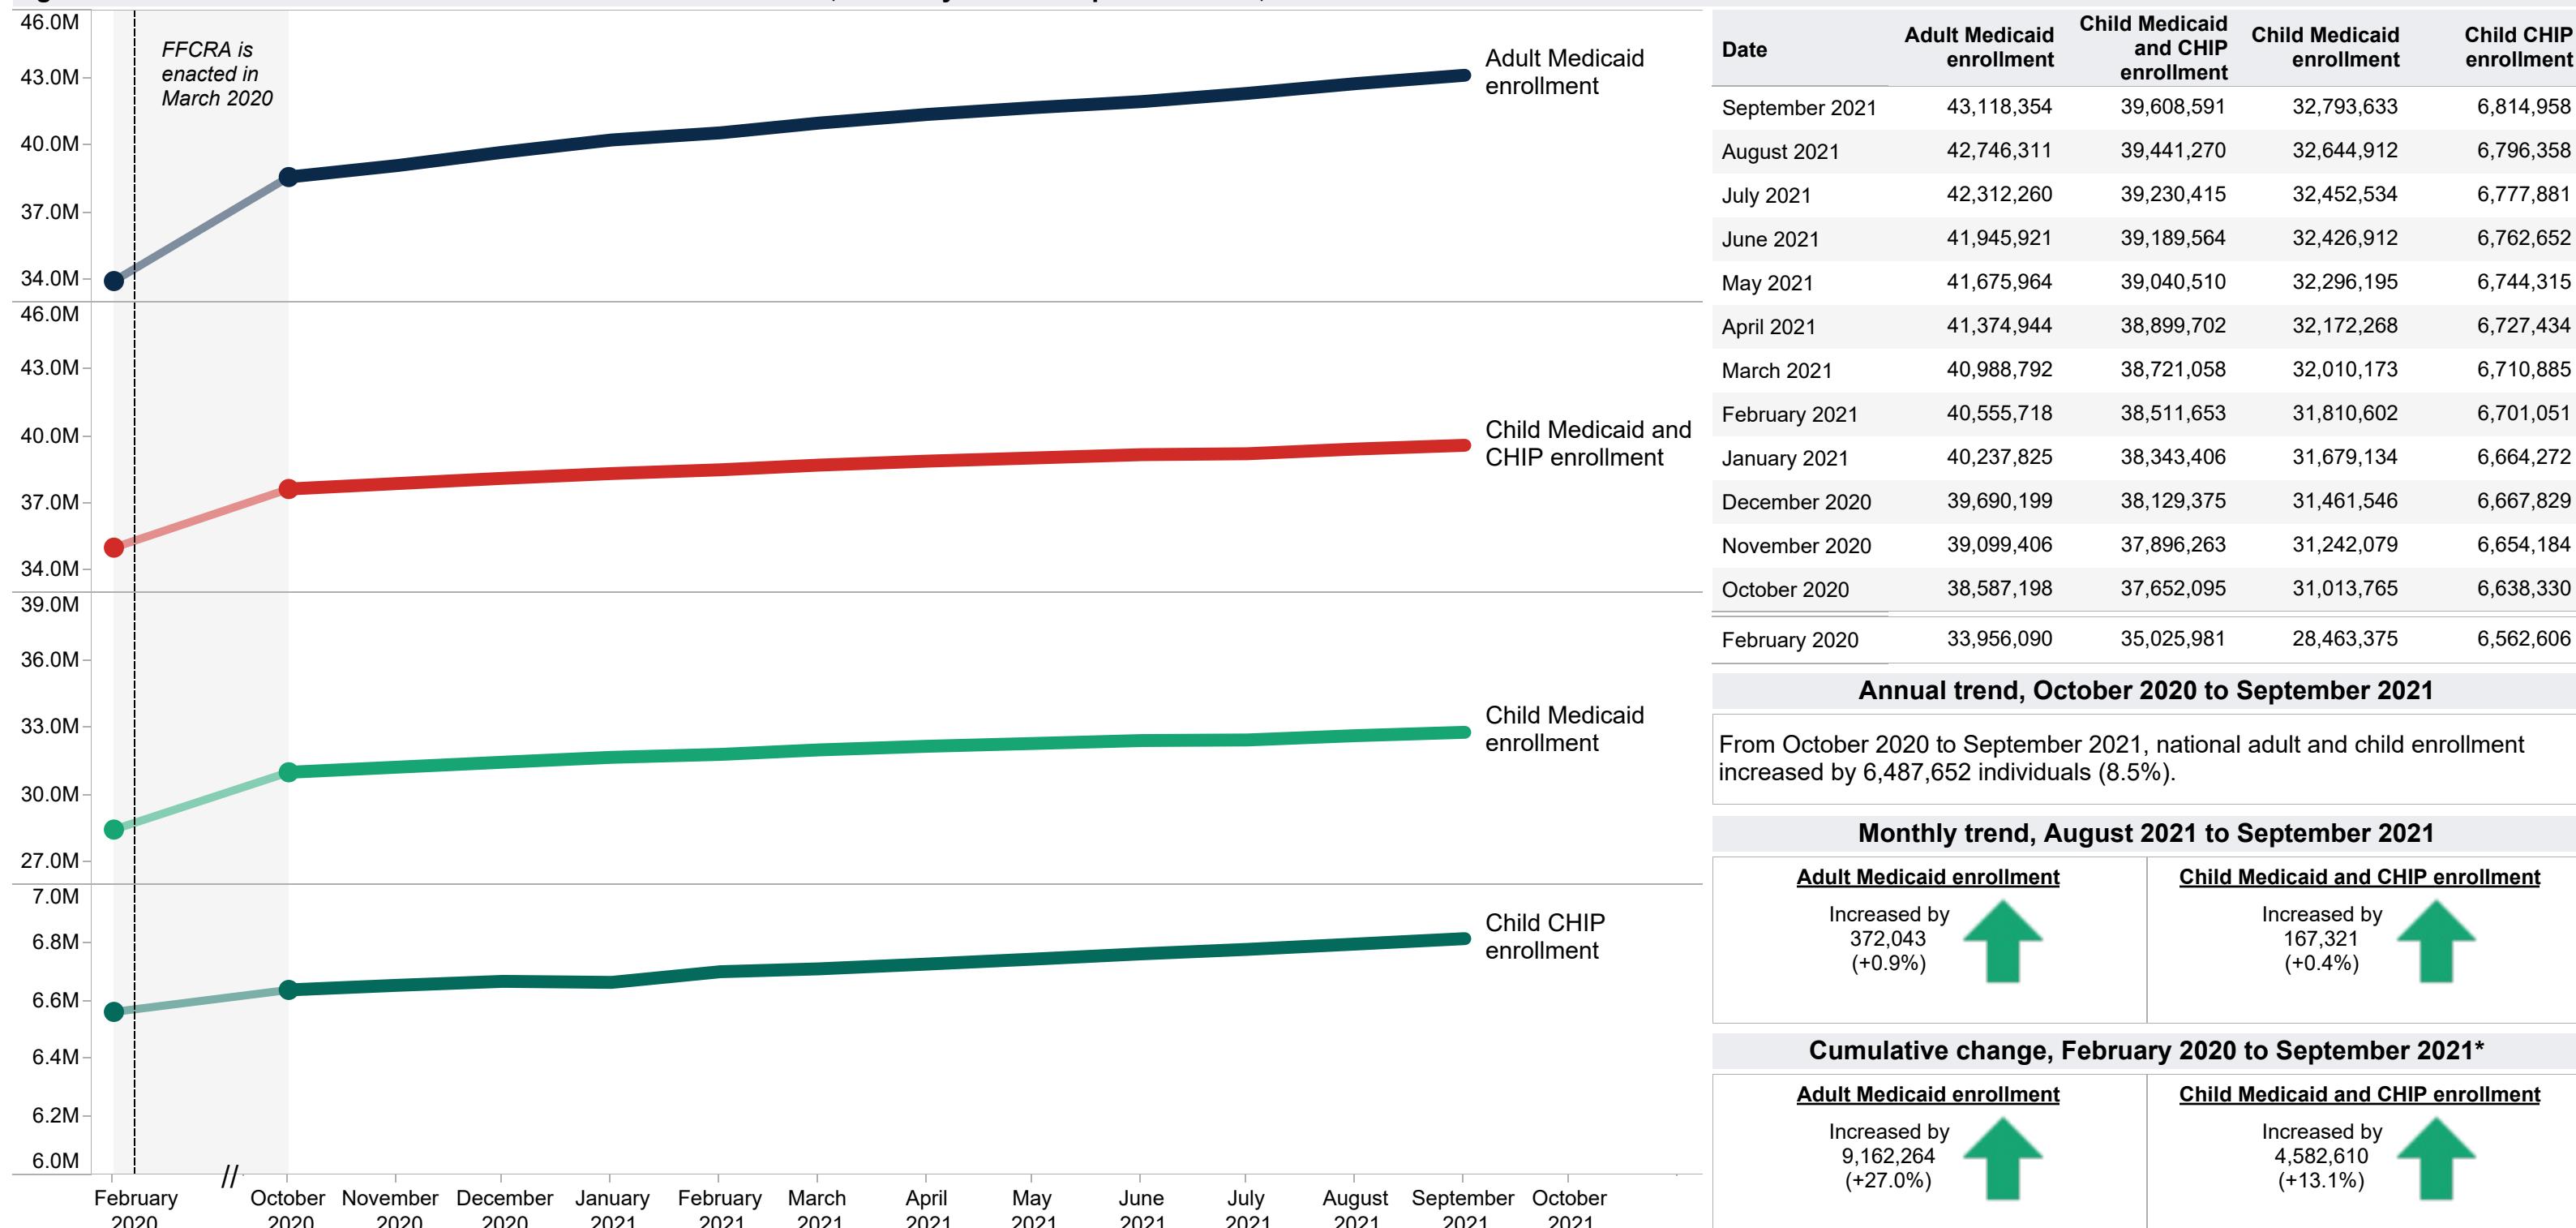

Source: Medicaid and CHIP Eligibility and Enrollment Performance Indicator Data as of January 18, 2022.

Note: This analysis includes preliminary enrollment data from 50 states and the District of Columbia. "FFCRA" refers to the Families First Coronavirus Response Act. Section 6008 of FFCRA includes a continuous enrollment requirement, which makes available a temporary 6.2 percentage point increase to each state or territory's federal medical assistance percentage (FMAP) during the national public health emergency. As a condition of receiving the FMAP increase, states must meet several requirements pertaining to eligibility and maintenance of enrollment.

*The cumulative change compares the most recent enrollment data to February 2020, which serves as a baseline of enrollment prior to the impacts of the COVID-19 pandemic and FFCRA's continuous enrollment requirement. For additional information on Medicaid and CHIP enrollment from December 2019 to September 2021, please see Appendix A.

Figure 2. National adult and child enrollment in Medicaid and CHIP, February 2020 to September 2021, CMS Performance Indicator Data

Source: Medicaid and CHIP Eligibility and Enrollment Performance Indicator Data as of January 18, 2022.

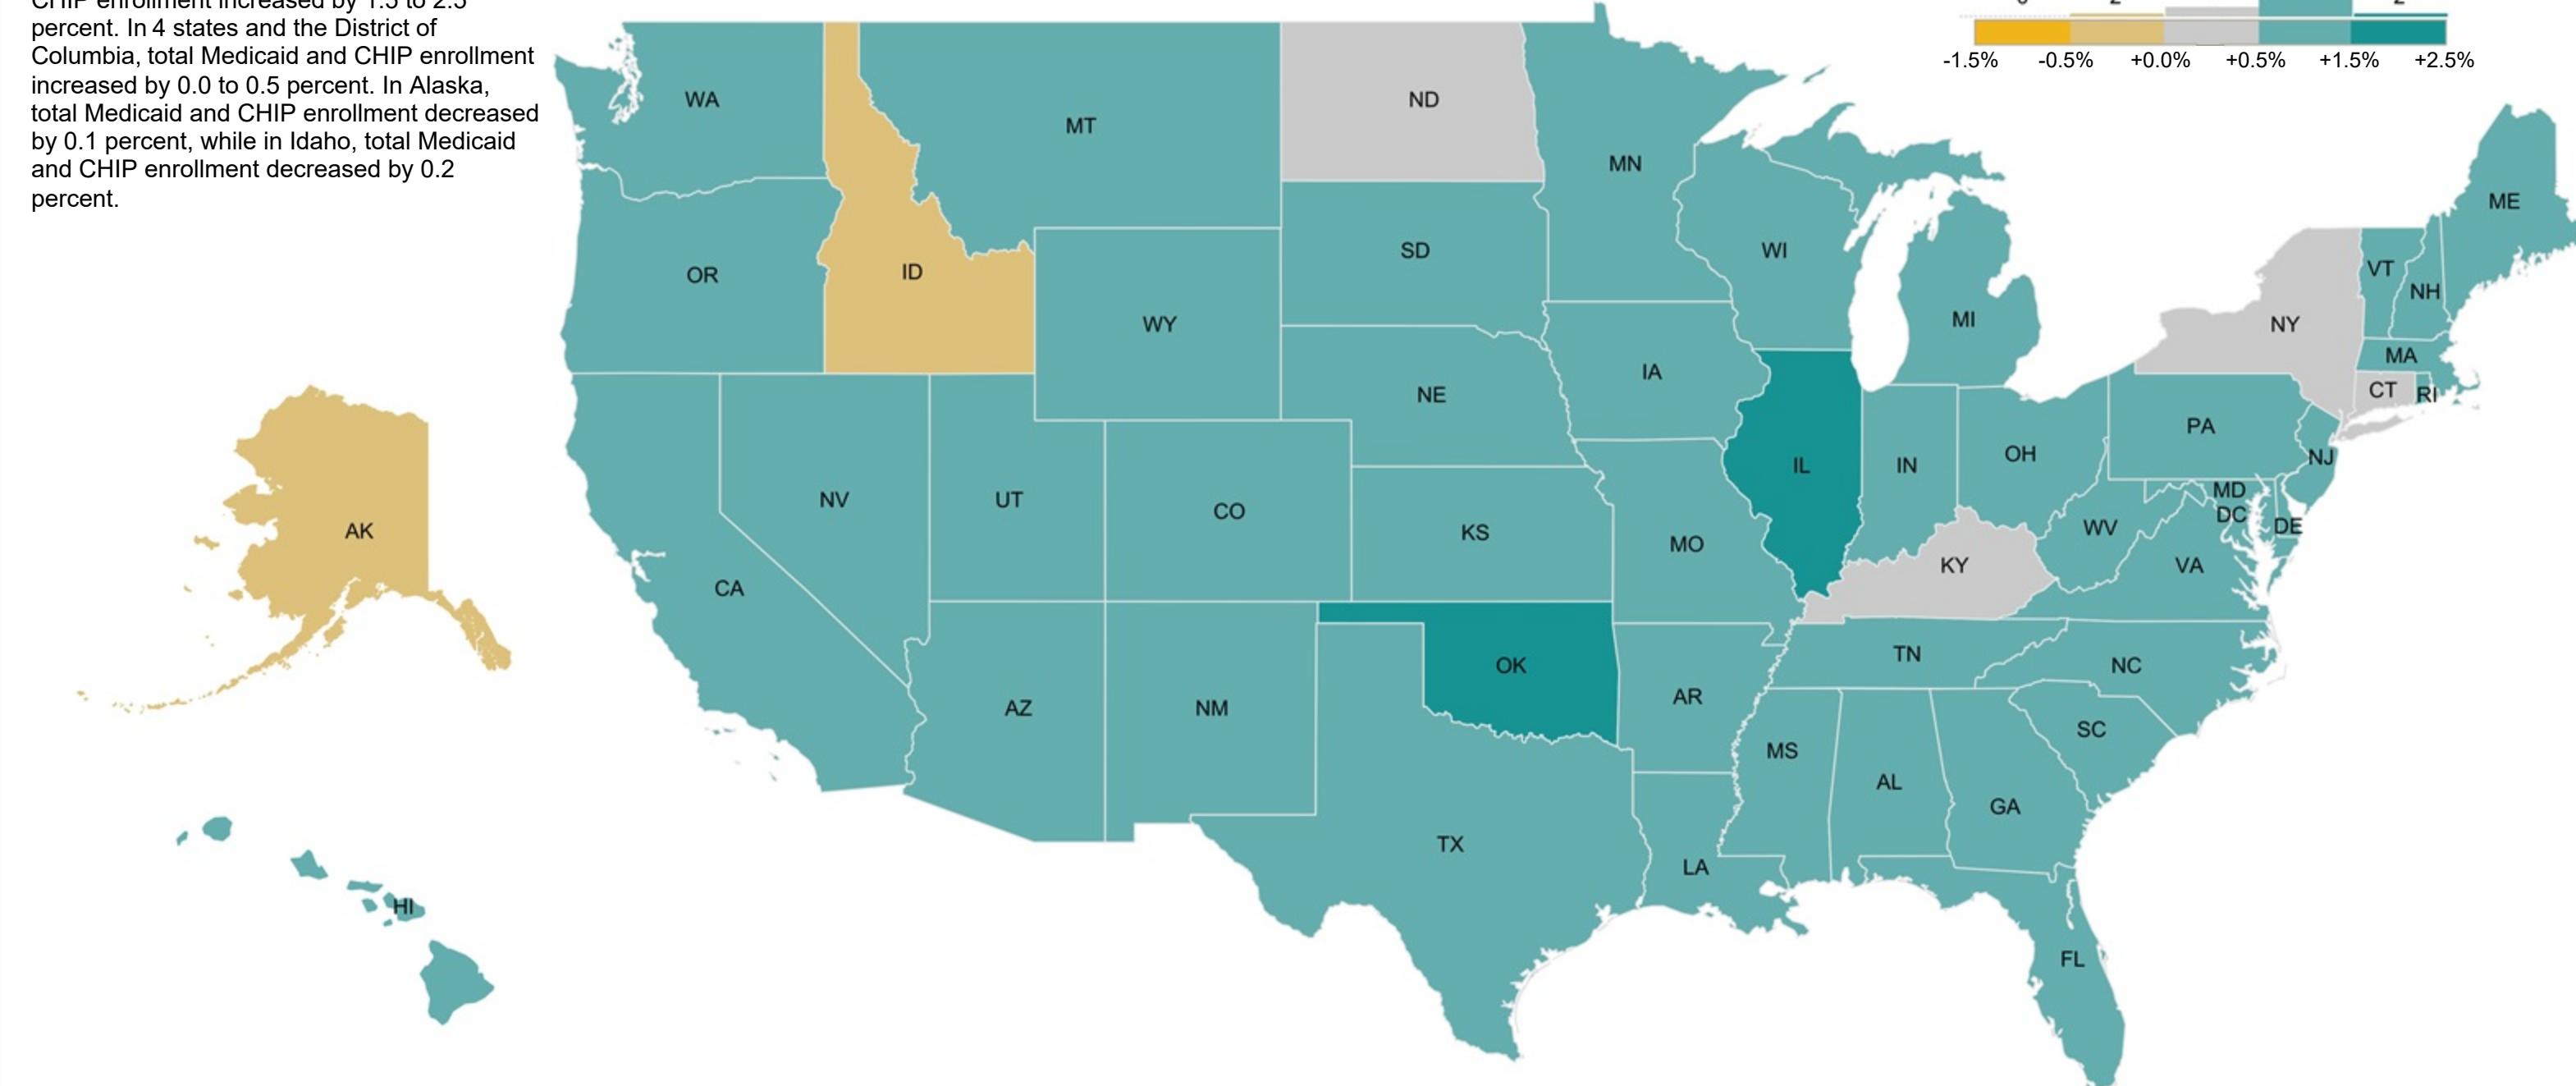

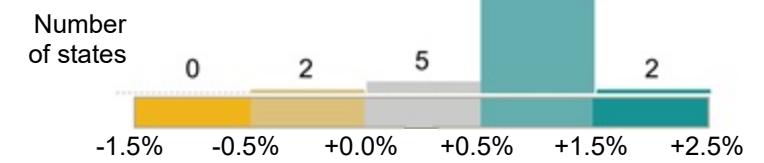

Note: This analysis includes preliminary enrollment data from 49 states and the District of Columbia. Arizona is excluded because the state did not report the breakouts for adult and child enrollment between February 2020 and September 2021. "FFCRA" refers to the Families First Coronavirus Response Act. Section 6008 of FFCRA includes a continuous enrollment requirement, which makes available a temporary 6.2 percentage point increase to each state or territory's federal medical assistance percentage (FMAP) during the national public health emergency. As a condition of receiving the FMAP increase, states must meet several requirements pertaining to eligibility and maintenance of enrollment.

*The cumulative change compares the most recent enrollment data to February 2020, which serves as a baseline of enrollment prior to the impacts of the COVID-19 pandemic and FFCRA's continuous enrollment requirement. For additional information on adult and child enrollment in Medicaid and CHIP from December 2019 to September 2021, please see Appendix B.

Figure 3a. Change in total Medicaid and CHIP enrollment, July 2021 to August 2021, CMS Performance Indicator Data

Between July 2021 and August 2021, total Medicaid and CHIP enrollment increased by 0.5 to 1.5 percent in 42 states. In 2 states (Illinois and Oklahoma), total Medicaid and CHIP enrollment increased by 1.5 to 2.5 percent. In 4 states and the District of Columbia, total Medicaid and CHIP enrollment increased by 0.0 to 0.5 percent. In Alaska, total Medicaid and CHIP enrollment decreased by 0.1 percent, while in Idaho, total Medicaid and CHIP enrollment decreased by 0.2 percent.

Percentage change in Medicaid and CHIP enrollment

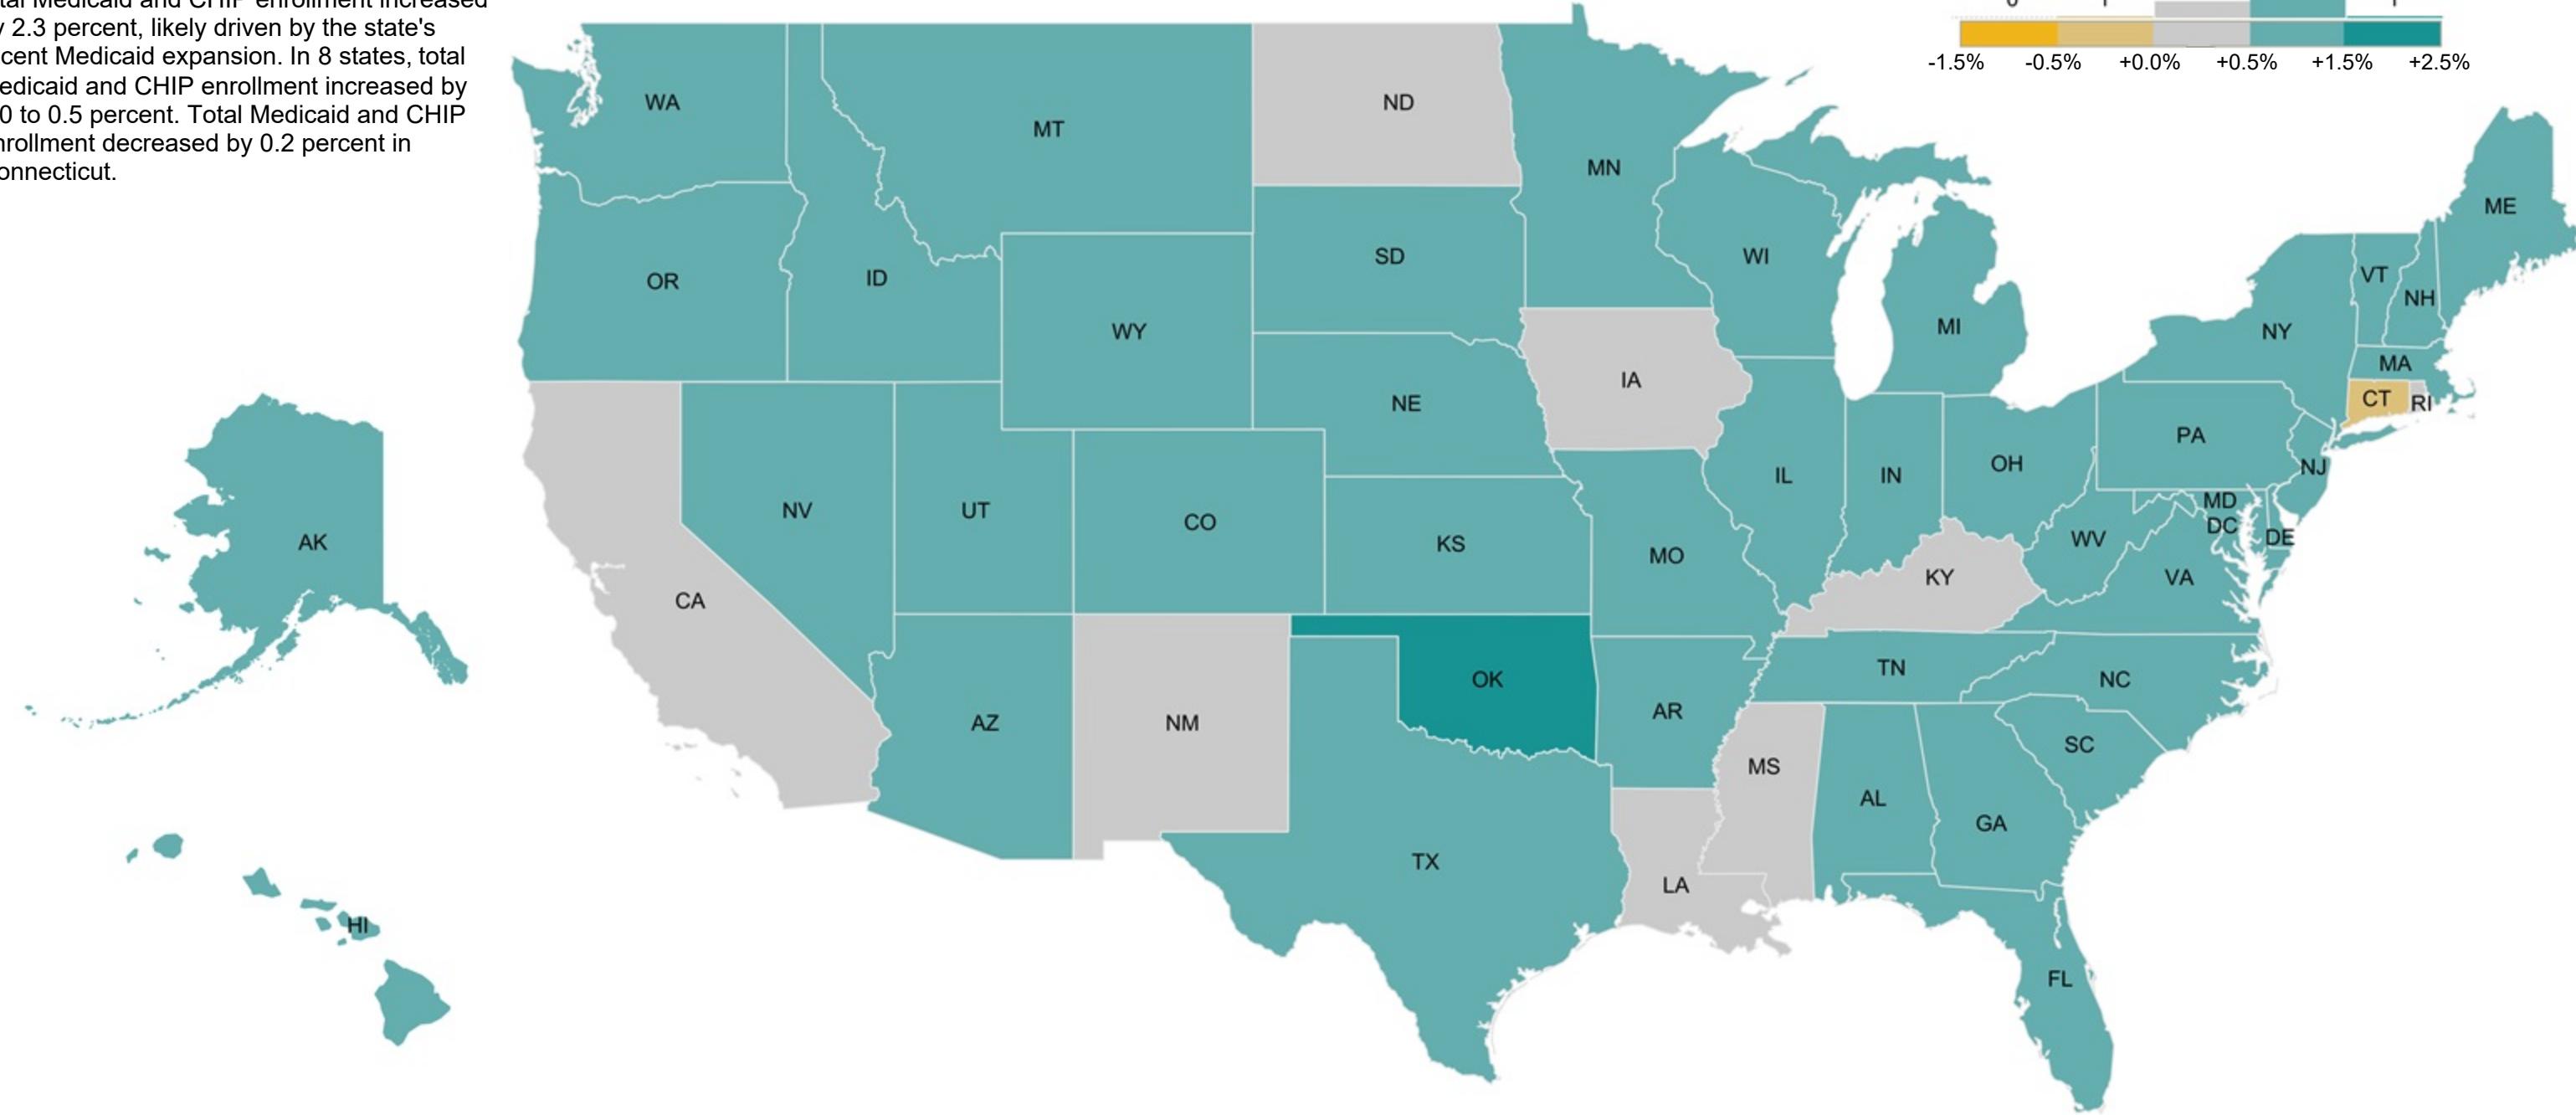

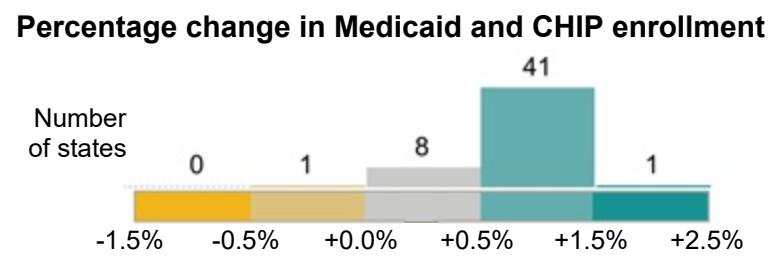

Source: Medicaid and CHIP Eligibility and Enrollment Performance Indicator Data as of January 18, 2022.

Note: This analysis includes preliminary enrollment data from 50 states and the District of Columbia.

Data context: (1) In Illinois, total Medicaid and CHIP enrollment increased by 2.3 percent (77,894 individuals) in August 2021. As of February 1, 2022, Illinois was investigating if the enrollment increase in August 2021 is accurate. (2) In Oklahoma, total Medicaid and CHIP enrollment increased by 2.1 percent (20,972 individuals) largely due to the state's new Medicaid expansion program, which began covering eligible adults on July 1, 2021. (3) In Idaho, total Medicaid and CHIP enrollment decreased by 0.2 percent (902 individuals), driven by a 2.6 percent decrease in child Medicaid enrollment (4,290 individuals). Idaho has confirmed its data are accurate and indicated the most common reason for recent coverage terminations is from individuals moving out of the state and becoming ineligible for Medicaid.

Figure 3b. Change in total Medicaid and CHIP enrollment, August 2021 to September 2021, CMS Performance Indicator Data

Between August 2021 and September 2021, total Medicaid and CHIP enrollment increased by 0.5 to 1.5 percent in 40 states and the District of Columbia. In Oklahoma, total Medicaid and CHIP enrollment increased by 2.3 percent, likely driven by the state's recent Medicaid expansion. In 8 states, total Medicaid and CHIP enrollment increased by 0.0 to 0.5 percent. Total Medicaid and CHIP enrollment decreased by 0.2 percent in Connecticut.

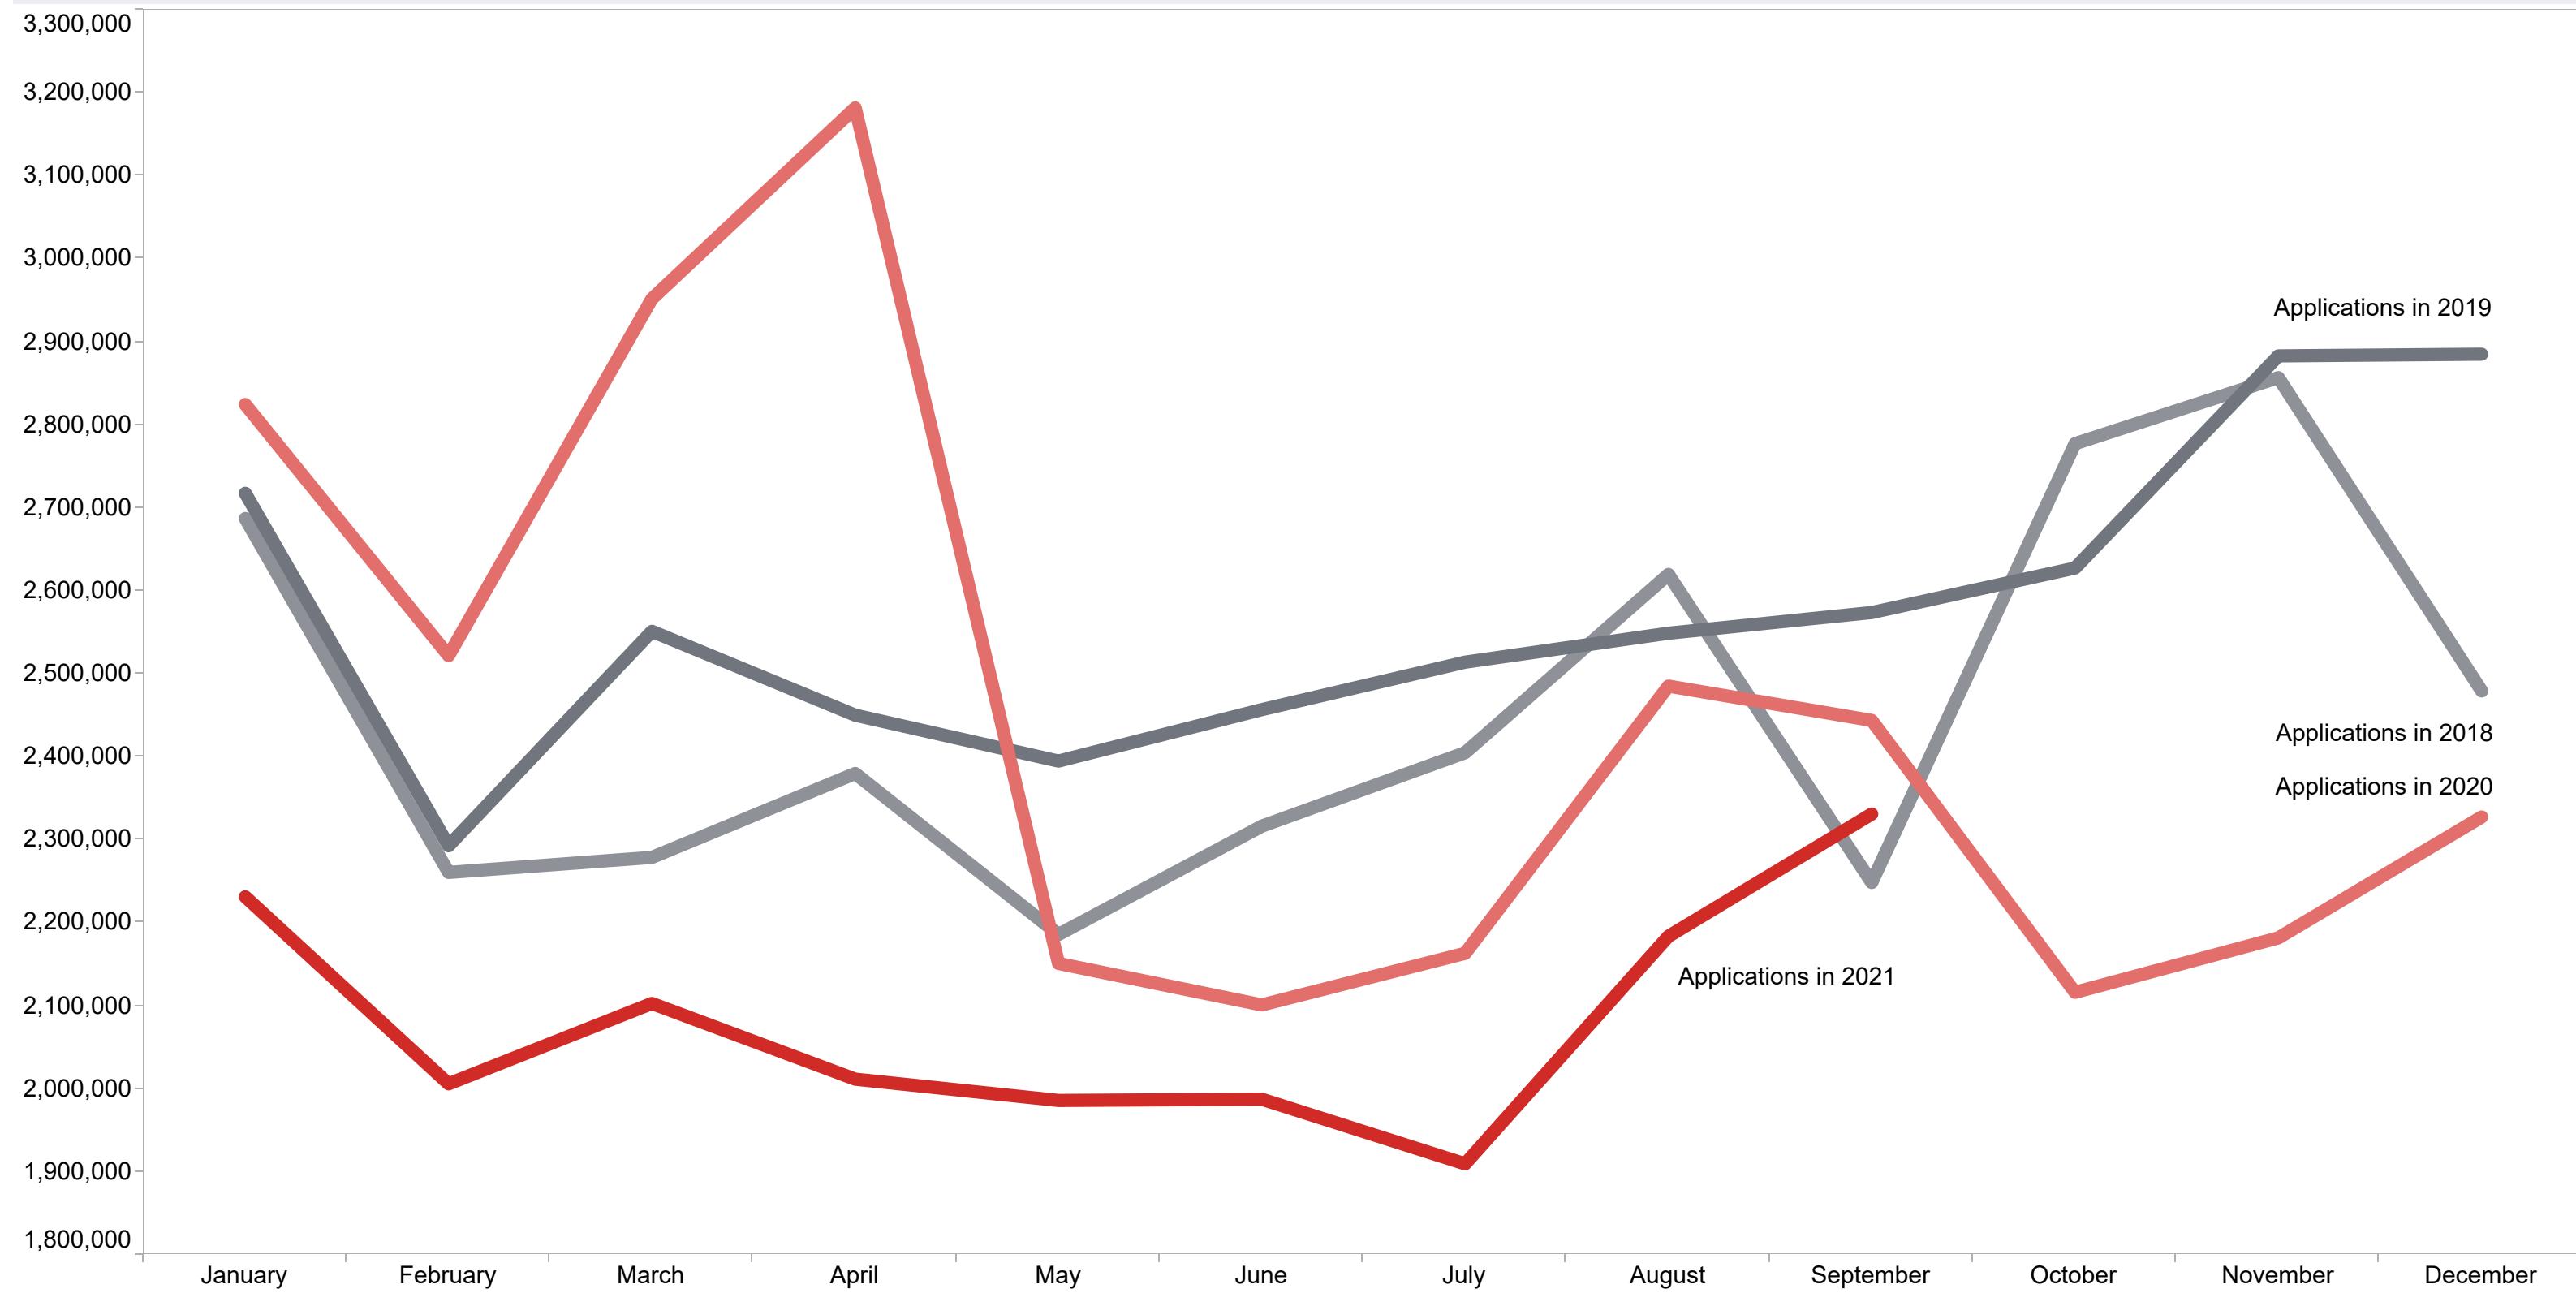

Source: Medicaid and CHIP Eligibility and Enrollment Performance Indicator Data as of January 18, 2022.

Note: This analysis includes preliminary enrollment data from 50 states and the District of Columbia.

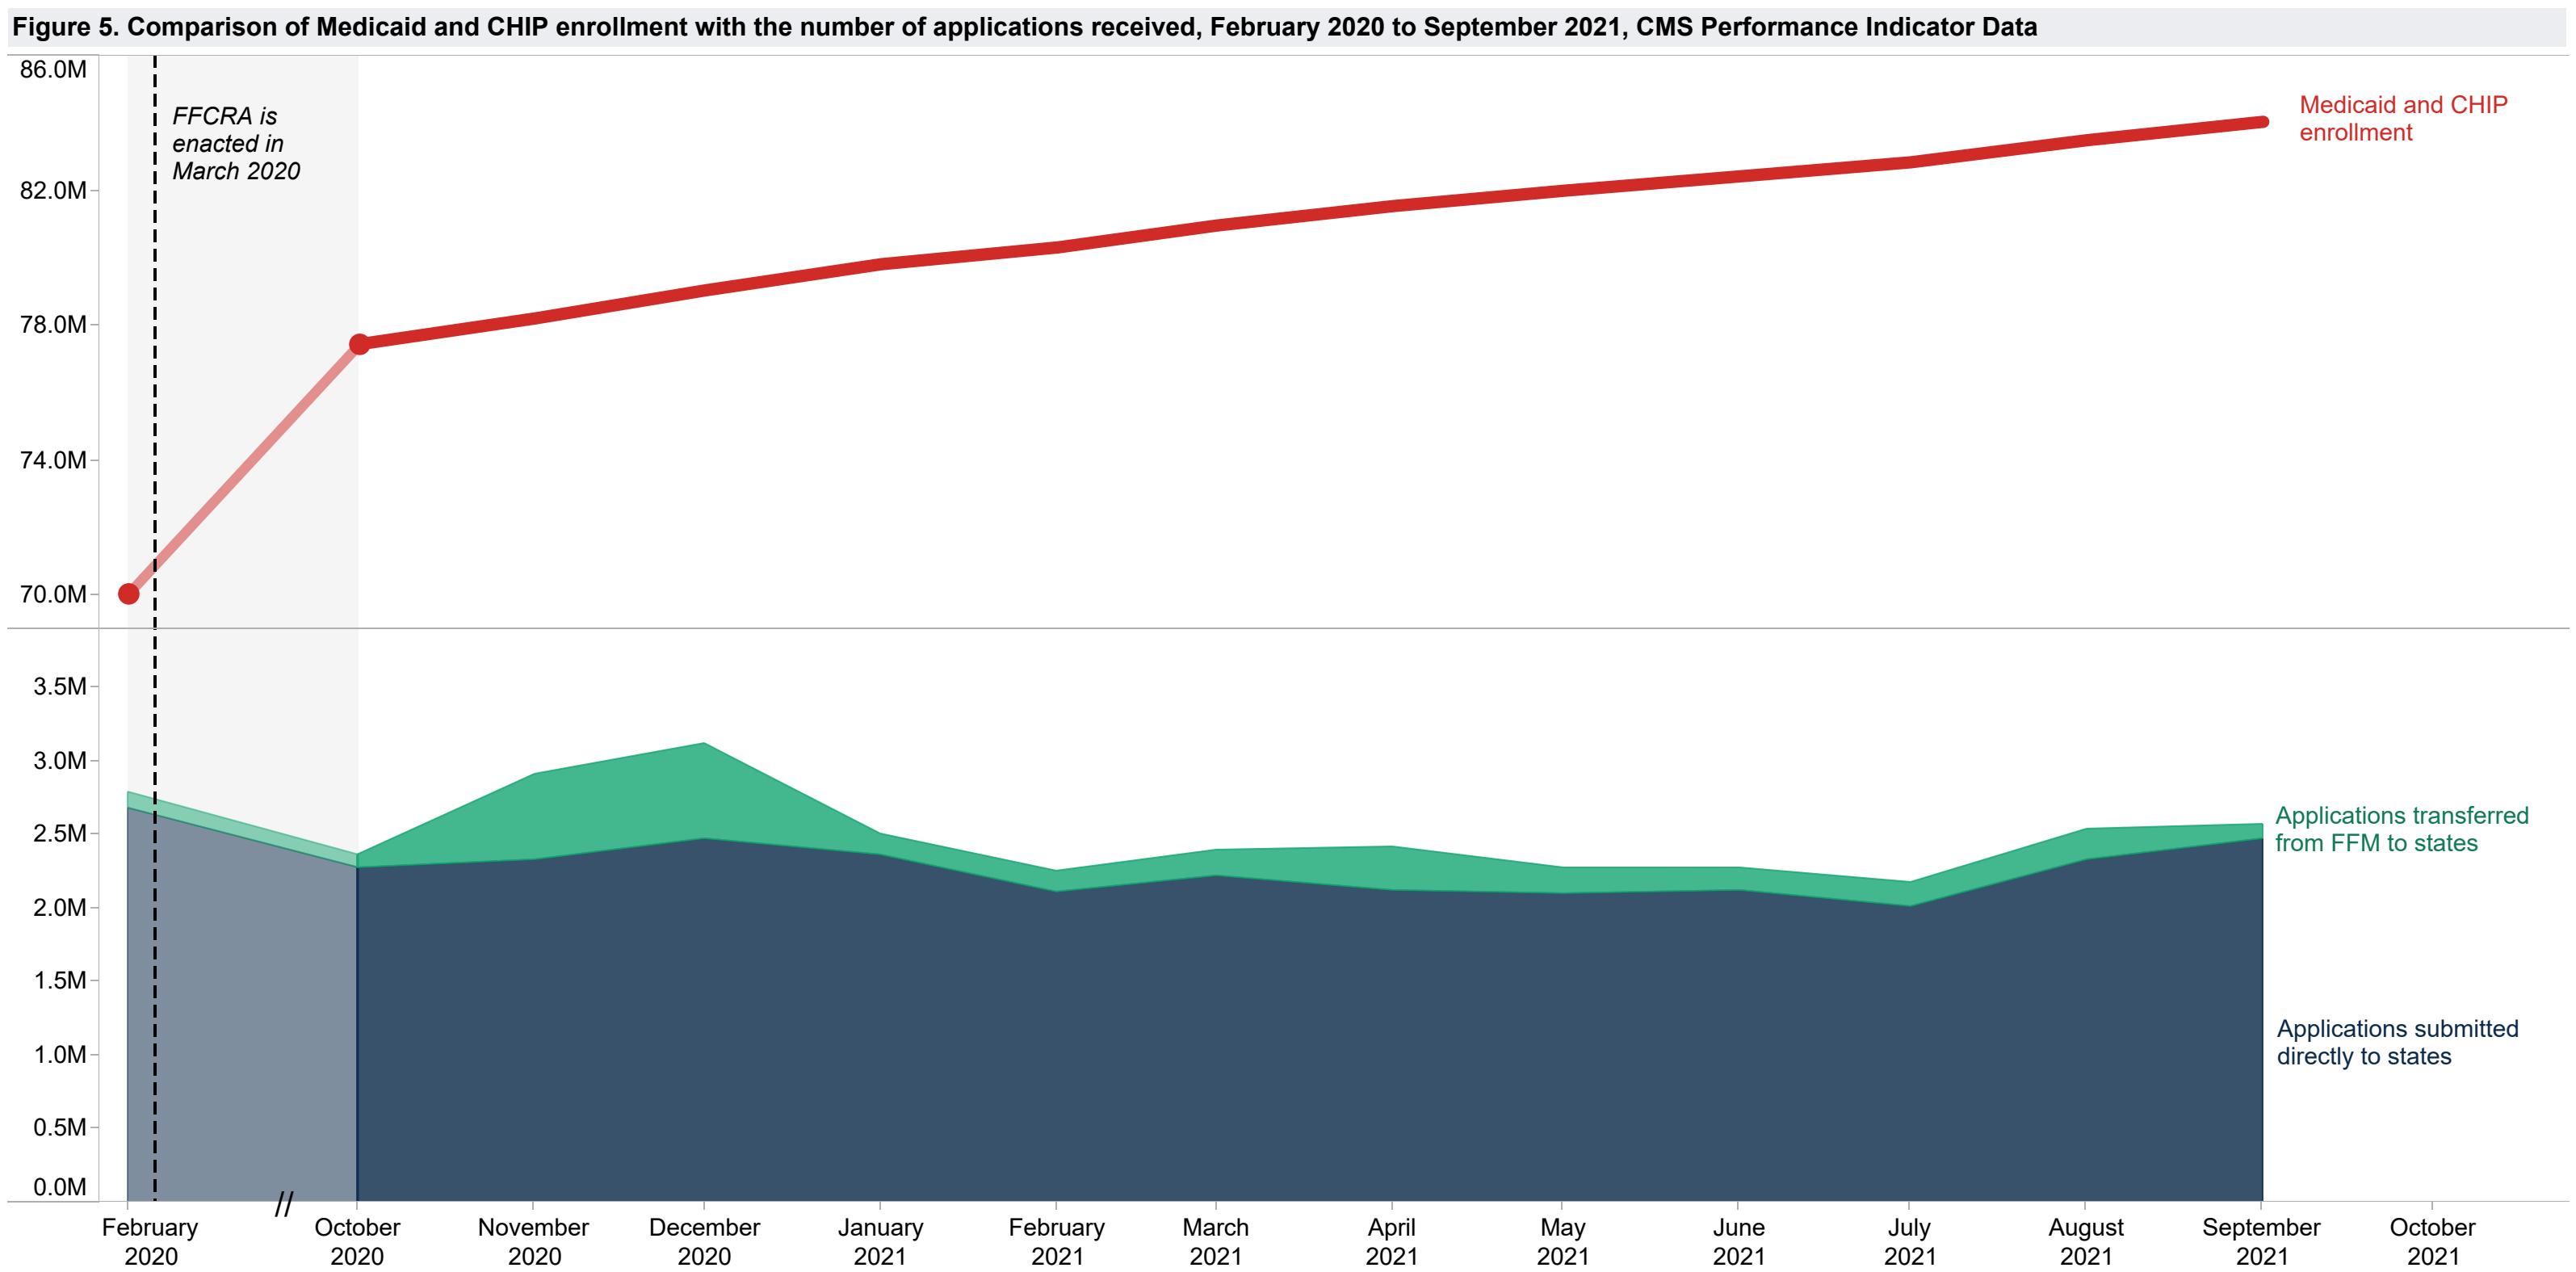

Data context: In Connecticut, total Medicaid and CHIP enrollment decreased by 0.2 percent (1,712 individuals) in September 2021. The state attributed the decrease to its closure of full-benefit Medicaid coverage for individuals who retain minimum essential coverage through enrollment in Medicare and a Medicare Savings Program.

Figure 4. National Medicaid and CHIP applications submitted directly to states from 2018 to 2021, CMS Performance Indicator Data

Source: Medicaid and CHIP Eligibility and Enrollment Performance Indicator Data as of January 18, 2022.

Note: Applications submitted directly to states include applications received by any state agency with the authority to make Medicaid or CHIP eligibility determinations, including the Medicaid agency, a separate CHIP agency, or a state-based marketplace. Applications transferred from the FFM are not included. This analysis includes preliminary applications data from 44 states and the District of Columbia. Arizona, Arkansas, Colorado, Kansas, Maine, and Tennessee are excluded because these states did not report applications data for one or more months between January 2018 and September 2021.

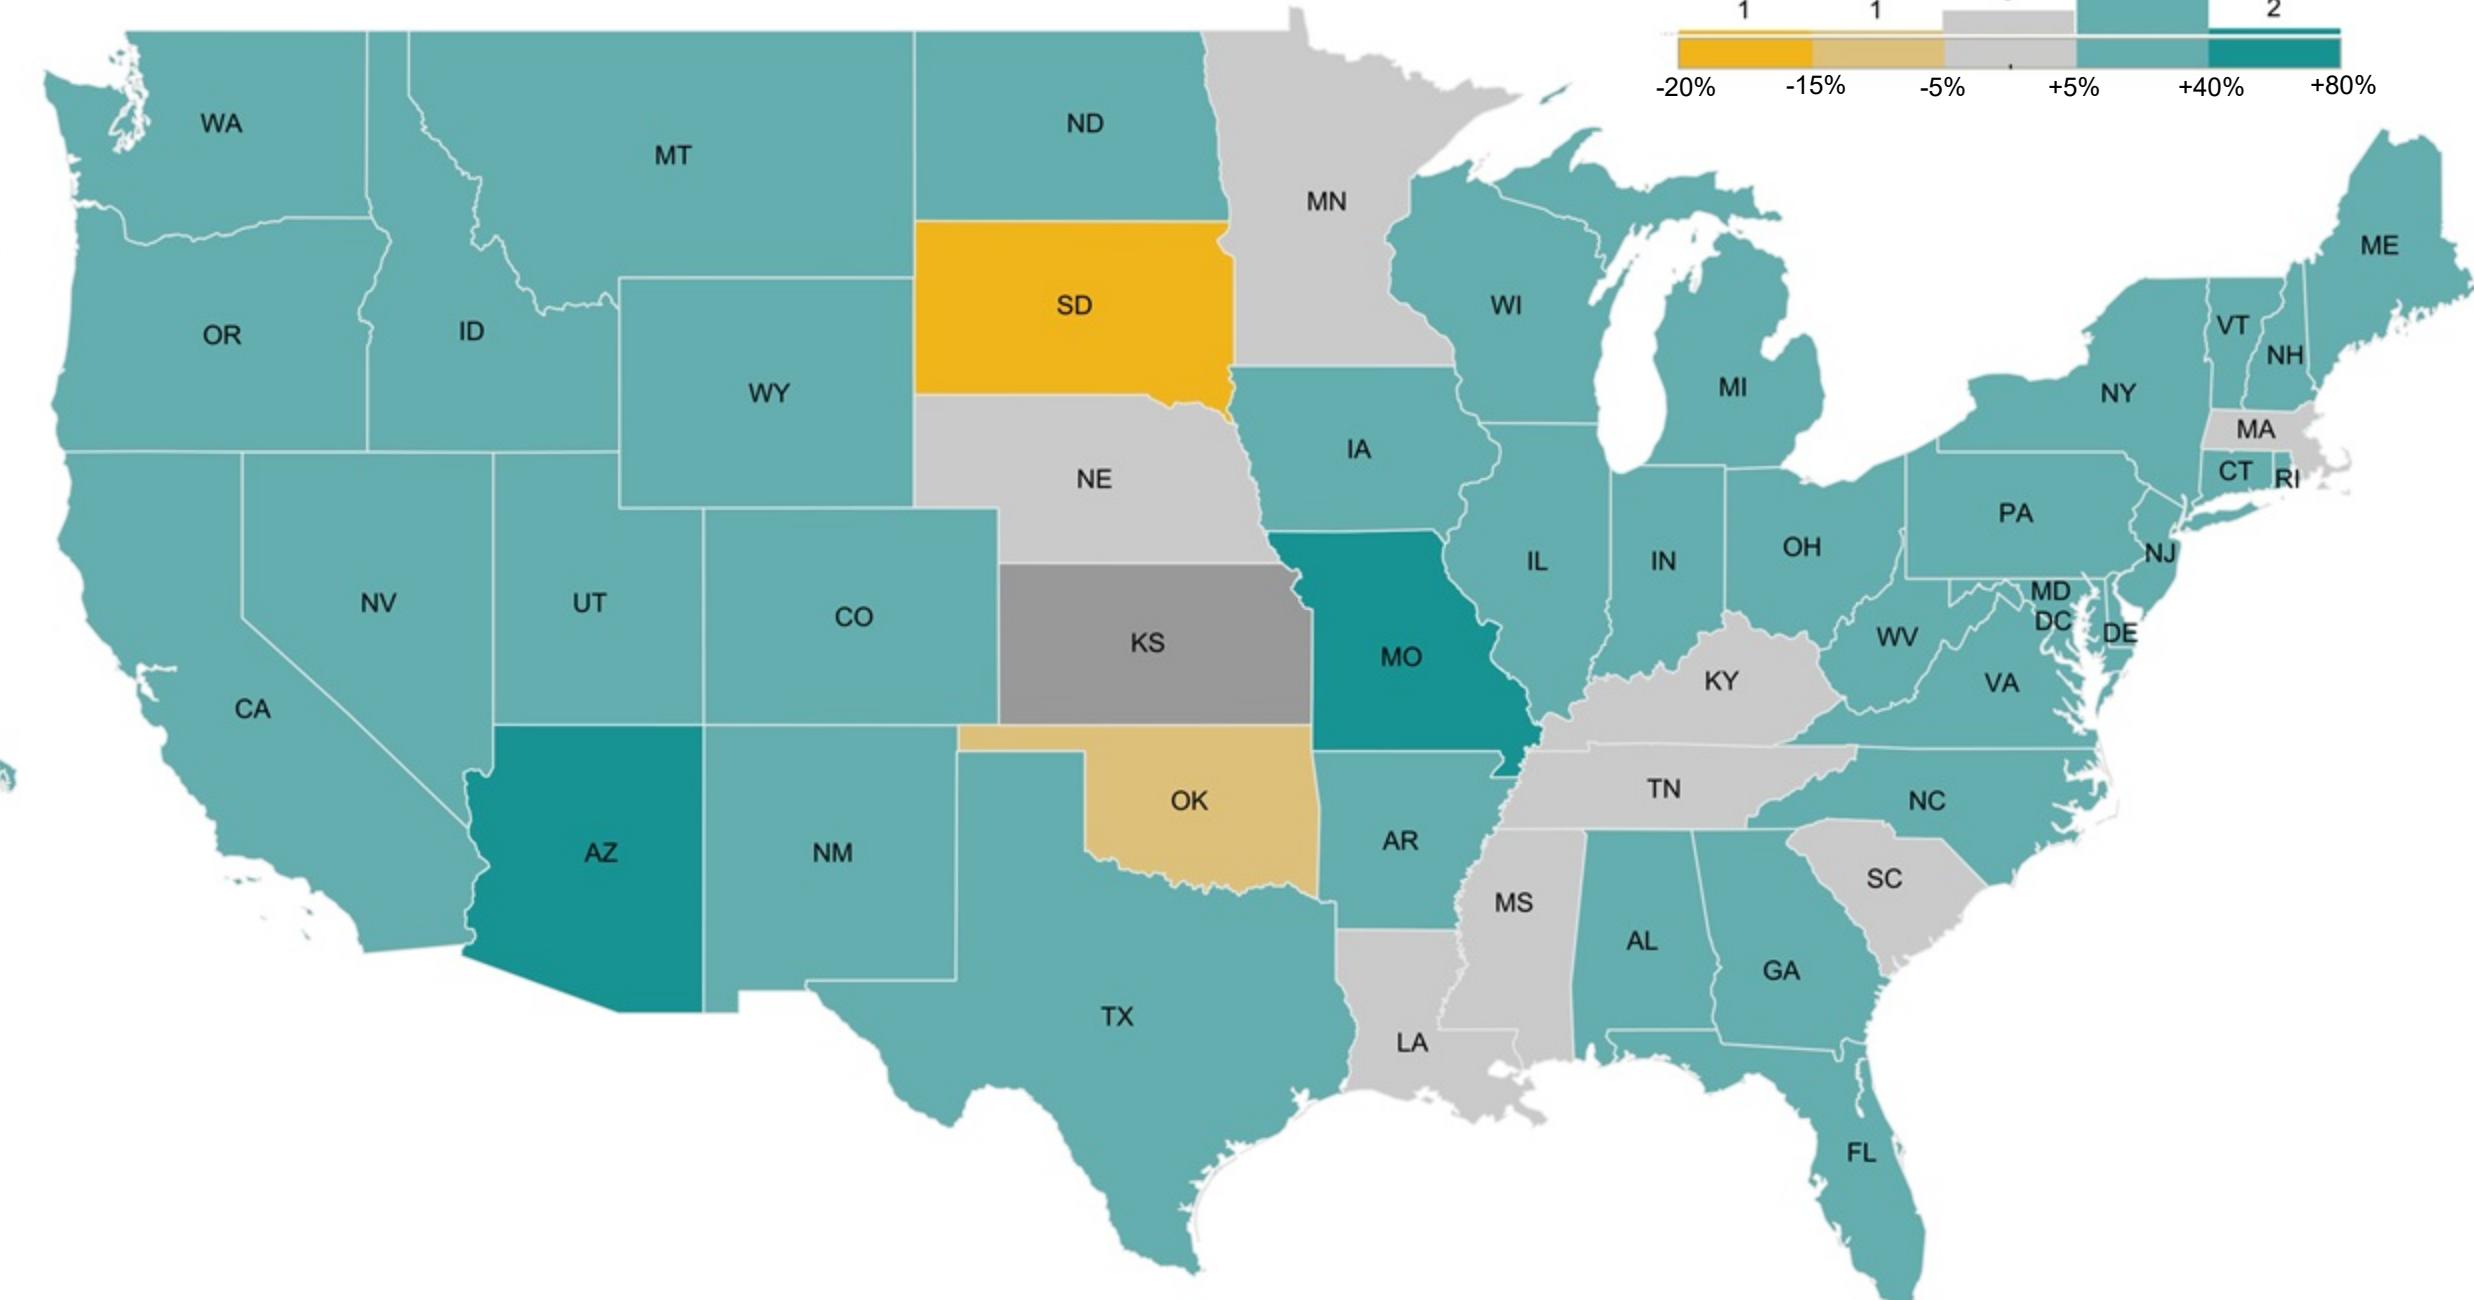

Source: Medicaid and CHIP Eligibility and Enrollment Performance Indicator Data as of January 18, 2022.

Note: Applications submitted directly to states include applications received by any state agency with the authority to make Medicaid or CHIP eligibility determinations, including the Medicaid agency, a separate CHIP agency, or a state-based marketplace. Applications transferred from the FFM to states include the total number of accounts electronically transferred from the FFM to states for Medicaid or CHIP. This analysis includes preliminary enrollment, applications, and account transfer data from 48 states and the District of Columbia. Kansas and Maine did not report data on applications submitted directly to the state for one or more months between February 2020 and September 2021, and so are excluded from this analysis.

Data quality: New Jersey, Pennsylvania, and Nevada unexpectedly reported applications transferred from the FFM to the state in at least one month after having transitioned to a state-based marketplace. These three states are retained in the analysis despite this data quality concern.

Figure 6a. Change in Medicaid and CHIP applications submitted directly to states, July 2021 to August 2021, CMS Performance Indicator Data

Nationally, the number of Medicaid and CHIP applications submitted directly to states was about 16 percent higher in August 2021 compared to July 2021. In 2 states (Oklahoma and South Dakota), applications decreased by 5 to 20 percent. In 8 states, applications changed by less than 5 percent. In 37 states and the District of Columbia, applications increased by 5 to 40 percent. Applications increased by 49 percent in Missouri; this was largely due to the state beginning to accept applications for coverage under Medicaid Expansion. In Arizona, applications increased by 76 percent.

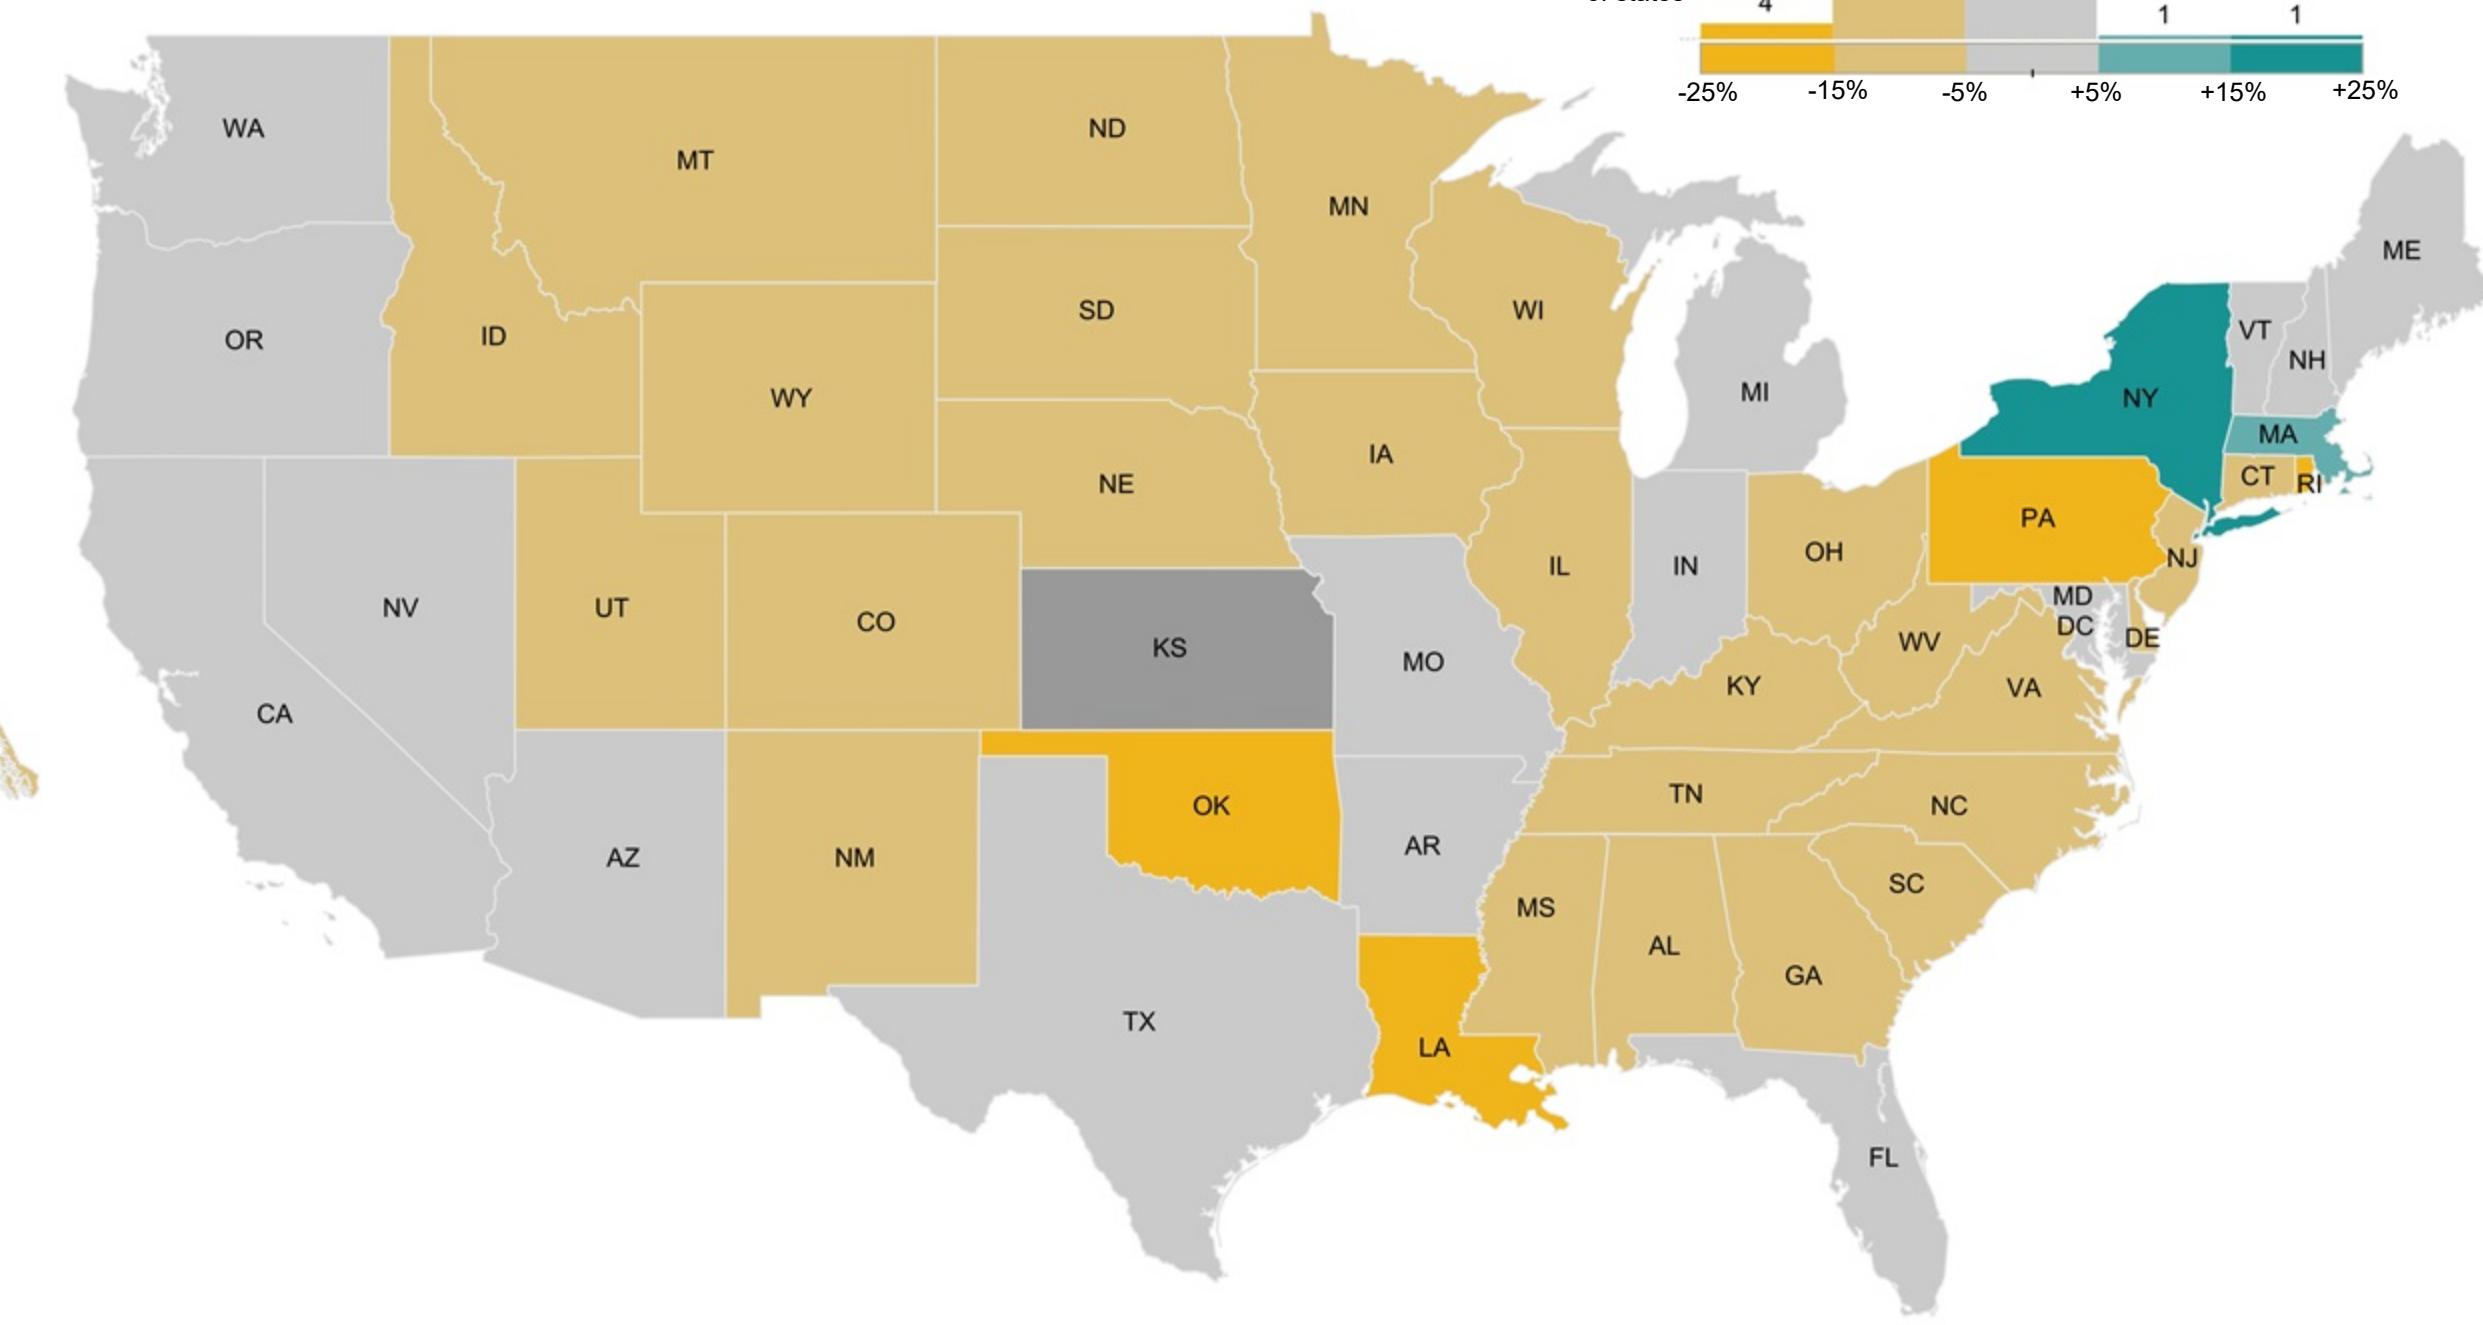

Source: Medicaid and CHIP Eligibility and Enrollment Performance Indicator Data as of January 18, 2022.

Note: Applications submitted directly to states include applications received by any state agency with the authority to make Medicaid or CHIP eligibility determinations, including the Medicaid agency, a separate CHIP agency, or a state-based marketplace. Applications transferred from the FFM are not included. This analysis includes preliminary applications data from 49 states and the District of Columbia. Kansas is excluded because the state did not report applications data for July 2021 and August 2021.

Data context: (1) Missouri began accepting applications for coverage under Medicaid Expansion on August 1, 2021, which accounts for the state's increase in applications in August 2021. Although Missouri did not begin processing applications until October 1, 2021, the state announced that individuals who apply by November 1, 2021 can receive retroactive coverage back to July 1, 2021. (2) In Arizona, applications increased by 76 percent (42,001 applications) from July 2021 to August 2021. As of February 1, 2022, Arizona was investigating the cause for this increase.

Figure 6b. Change in Medicaid and CHIP applications submitted directly to states, August 2021 to September 2021, CMS Performance Indicator Data

Nationally, the number of Medicaid and CHIP applications submitted directly to states was about 6 percent higher in September 2021 compared to August 2021. In 4 states, applications decreased by 15 to 25 percent. In 27 states and the District of Columbia, applications decreased by 5 to 15 percent. Applications changed by less than 5 percent in 16 states. In Massachusetts, applications increased by 6 percent, while in New York, applications increased by 24 percent.

Source: Medicaid and CHIP Eligibility and Enrollment Performance Indicator Data as of January 18, 2022.

Note: Applications submitted directly to states include applications received by any state agency with the authority to make Medicaid or CHIP eligibility determinations, including the Medicaid agency, a separate CHIP agency, or a state-based marketplace. Applications transferred from the FFM are not included. This analysis includes preliminary applications data from 49 states and the District of Columbia. Kansas is excluded because the state did not report applications data for August 2021 and September 2021.

Data context: In New York, applications increased by 24 percent (194,447 applications) from August 2021 to September 2021; this represents a larger absolute change than all other states combined and is driving the national trend. If New York were excluded, then total applications across all other states would have decreased by 48,295 applications (3 percent) from August 2021 to September 2021.

Note: This table summarizes Medicaid and CHIP enrollment since December 2019. This table is provided as a supplement to Figure 1, and includes preliminary enrollment data from 50 states and the District of Columbia.

Source: Medicaid and CHIP Eligibility and Enrollment Performance Indicator Data as of January 18, 2022.

Note: This table summarizes adult and child enrollment in Medicaid and CHIP since December 2019. This table is provided as a supplement to Figure 2, and includes preliminary enrollment data from 49 states and the District of Columbia. Arizona is excluded from both Figure 2 and Appendix B because the state did not report the breakouts for adult and child enrollment between February 2020 and September 2021.

Background

- This is a Center for Medicaid & CHIP Services (CMCS) Medicaid and CHIP Coverage Learning Collaborative (MAC LC) project that monitors Medicaid and Children’s Health Insurance Program (CHIP) enrollment trends, primarily using the Centers for Medicare and Medicaid Services (CMS) Performance Indicator Data.
- The MAC LC is a CMCS project that provides a forum for facilitated discussion and learning across CMS and states, with the goal of implementing and improving the programs, tools, and systems needed to ensure high-performing state health insurance programs. The MAC LC has enabled CMS to more effectively identify issues and also monitor and improve program performance.
- This snapshot is a companion to the August and September 2021 Medicaid & CHIP Application, Eligibility, and Enrollment Data posted on [Medicaid.gov](https://www.medicaid.gov).
- The Enrollment Trends project primarily relies on Performance Indicator Data. All states—including the District of Columbia—provide data each month about their Medicaid and CHIP eligibility and enrollment activity. These data reflect a range of indicators related to key application, eligibility, and enrollment processes within the state Medicaid and CHIP agency. The complete data set is available on Data.Medicaid.gov.
