<sup>a</sup> For some measures, the measurement period for the numerator, denominator, or continuous enrollment period varies depending on a specified date for each enrollee (such as enrollee birthdates, prescription or treatment start dates, and discharge dates). For these measures, two ranges are shown. The first date range identifies the full range of possible dates that states will need to use to calculate the measure for all measure-eligible enrollees. The text in parentheses describes the measurement period that should be used for each eligible enrollee.

<sup>b</sup> When reporting each measure to CMS, states should report the measurement period they used for the denominator in the “Start Date” and “End Date” fields. For many measures, this date range corresponds to calendar year 2020 (January 1, 2020–December 31, 2020). Some measures also require states to review utilization or enrollment prior to this period to identify the measure eligible population. For these measures, two date ranges are included in this table. The first date range should be used to populate the Start Date and End Date fields, while the second date range defines these prior review periods and should not be included in the Start Date and End Date fields. For example, the IET-HH measure instructs states to identify enrollees with index episode start dates (IESD) that started January 1, 2020 through November 14, 2020 (the first date range). However, states will also need to review an enrollee’s diagnosis history for 60 days prior to the date of the IESD to confirm that the patient had no claims/encounters with a diagnosis of AOD dependence (the second date range). States that followed the

FFY2021 Health Home Core Set specifications should enter “January 2020” in the Start Date field and “November 2020” in the End Date field. States should note any deviations to any measurement period (numerator, denominator, continuous enrollment) in the “Deviations from Measurement Specifications” section.
